

10355 science center drive

10355 science center drive is a prominent address known for its strategic location and the diverse range of facilities it hosts. Situated in a key commercial and educational hub, this location attracts businesses, research institutions, and visitors alike. The area surrounding 10355 science center drive offers excellent accessibility, modern infrastructure, and a vibrant community atmosphere. This article explores the significance of 10355 science center drive, detailing its location advantages, nearby amenities, business opportunities, and transportation options. Whether you are considering a visit, relocation, or investment, understanding the features of this address is essential. The following sections provide an in-depth look into what makes 10355 science center drive a noteworthy destination.

- Location and Accessibility of 10355 Science Center Drive
- Nearby Amenities and Facilities
- Business and Economic Opportunities
- Transportation and Connectivity
- Real Estate and Development Trends

Location and Accessibility of 10355 Science Center Drive

10355 science center drive is located within a thriving commercial and research district, making it an ideal spot for businesses and institutions seeking prominence and convenience. This location is strategically positioned to provide easy access to major highways, public transportation hubs, and neighboring cities. Its proximity to technology parks and educational institutions enhances its appeal, especially for companies engaged in innovation and scientific research. The surrounding environment is well-maintained, offering a professional setting that supports a wide range of activities from corporate offices to collaborative research centers.

Geographical Placement

The address benefits from a central position within the metropolitan area, allowing quick commutes from residential neighborhoods and nearby towns. The geographical placement supports a balance between urban convenience and a calm, focused work environment. This blend attracts a diverse demographic, including professionals, academics, and entrepreneurs.

Access to Major Highways and Roads

10355 science center drive is accessible via several major roads and highways, facilitating straightforward travel for employees, clients, and suppliers. The connectivity reduces transit times and enhances logistical efficiency for businesses operating in this region. Additionally, well-marked routes and ample parking options make it easy for visitors to navigate the area.

Nearby Amenities and Facilities

The vicinity around 10355 science center drive features a comprehensive array of amenities designed to support both professional and personal needs. From dining options to recreational facilities, the area offers a balanced environment that promotes productivity and well-being. The availability of these services significantly contributes to the attractiveness of the location for businesses and their workforce.

Dining and Retail Options

Several restaurants, cafes, and retail outlets are conveniently located near 10355 science center drive. These establishments cater to a variety of tastes and preferences, providing options for quick meals, business lunches, and casual dining. The retail stores offer essential goods and services, contributing to the convenience for those working or visiting the area.

Recreational and Wellness Facilities

Access to parks, fitness centers, and wellness clinics near 10355 science center drive supports a healthy lifestyle for employees and residents. These facilities encourage physical activity and relaxation, which are vital for maintaining productivity and job satisfaction. The presence of green spaces also enhances the overall ambiance of the area.

Business and Economic Opportunities

10355 science center drive is situated in an economically vibrant zone that fosters business growth and innovation. The location is attractive to startups, established corporations, and research institutions due to its resources and networking potential. A supportive economic environment encourages collaborations and investments, making it a hotspot for economic development.

Industry Clusters and Innovation Hubs

The address lies within or near several industry clusters specializing in technology, biotechnology, and scientific research. These clusters provide opportunities for synergies among businesses and facilitate access to specialized talent and resources. Innovation hubs and incubators in the area further support entrepreneurial ventures and research initiatives.

Networking and Professional Development

Frequent conferences, workshops, and seminars held near 10355 science center drive create a dynamic environment for professional growth. Networking opportunities abound, allowing businesses and professionals to establish valuable connections and partnerships. These events contribute to the continuous development of skills and knowledge within the local workforce.

Transportation and Connectivity

Efficient transportation options are a key feature of 10355 science center drive, ensuring seamless connectivity for commuters and visitors. The availability of public transit, shuttle services, and well-maintained road infrastructure facilitates easy access to the address from various locations.

Public Transit Services

Bus lines and nearby train stations provide multiple public transit options for reaching 10355 science center drive. These services reduce reliance on personal vehicles, thereby alleviating traffic congestion and promoting sustainable commuting practices. Timely and frequent transit schedules enhance accessibility for all users.

Parking and Shuttle Facilities

Ample parking spaces are available in the vicinity of 10355 science center drive, accommodating employees and visitors with ease. Additionally, some organizations offer shuttle services that connect the address to major transit points and parking areas, improving convenience and reducing travel time.

Real Estate and Development Trends

The real estate market around 10355 science center drive is characterized by ongoing development and modernization. Investment in commercial properties and infrastructure is driven by strong demand from businesses and institutions seeking state-of-the-art facilities. These trends reflect the growing importance and appeal of this location.

Commercial Property Availability

A variety of commercial spaces, including office buildings, research laboratories, and mixed-use developments, are available for lease or purchase near 10355 science center drive. These properties feature modern amenities and flexible layouts designed to accommodate diverse business needs.

Development Projects and Future Outlook

Several development projects are underway or planned in the area surrounding 10355 science center drive. These initiatives aim to enhance infrastructure, increase property values, and attract additional businesses. The future outlook for this address remains positive, with continued growth anticipated in the coming years.

- Prime location within a commercial and research district
- Proximity to major highways and public transportation
- Access to diverse dining, retail, and wellness facilities
- Strong presence of industry clusters and innovation hubs
- Robust public transit and parking infrastructure
- Active real estate development and investment opportunities

Frequently Asked Questions

Where is 10355 Science Center Drive located?

10355 Science Center Drive is located in San Diego, California, within the Sorrento Mesa area known for its technology and biotech companies.

What types of businesses are found at 10355 Science Center Drive?

The location houses a variety of technology, biotech, and research companies, as well as office spaces for startups and established firms.

Is 10355 Science Center Drive accessible by public transportation?

Yes, 10355 Science Center Drive is accessible by several public transit options including nearby bus routes and close proximity to major highways.

Are there any amenities near 10355 Science Center Drive?

Yes, the area around 10355 Science Center Drive offers amenities such as restaurants, cafes, fitness centers, and retail stores catering to professionals working in the area.

What is the significance of 10355 Science Center Drive in San Diego's tech industry?

10355 Science Center Drive is situated in a key innovation hub in San Diego, contributing to the city's reputation in biotechnology and information technology sectors.

Can I rent office space at 10355 Science Center Drive?

Yes, there are leasing options available for office spaces at 10355 Science Center Drive, suitable for startups, small businesses, and larger corporations.

What is the parking situation at 10355 Science Center Drive?

The property offers ample parking facilities including surface lots and possibly structured parking to accommodate employees and visitors.

Are there any notable companies headquartered at 10355 Science Center Drive?

Several notable biotech and tech companies have offices at 10355 Science Center Drive, although specific names can vary as tenants change over time.

Is 10355 Science Center Drive close to any research institutions?

Yes, it is near prominent research institutions and universities in San Diego, fostering collaboration between academia and industry.

What is the building infrastructure like at 10355 Science Center Drive?

The buildings at 10355 Science Center Drive feature modern office facilities equipped with high-speed internet, conference rooms, and laboratory spaces tailored for scientific research.

Additional Resources

1. Exploring Innovation: The Story of 10355 Science Center Drive

This book delves into the history and development of 10355 Science Center Drive, highlighting its role as a hub for technological advancements and scientific research. It covers key milestones, notable companies, and the impact of the center on the local economy. Readers gain insight into how this location became a cornerstone for innovation in the region.

2. Science and Technology Parks: A Case Study of 10355 Science Center Drive

Focusing on science and technology parks, this book uses 10355 Science Center Drive as a primary case study. It examines the planning, design, and operational strategies that make such centers successful. The text also explores how these parks foster collaboration between academia, industry,

and government.

3. Corporate Campuses: The Architecture of 10355 Science Center Drive

This volume explores the architectural design and landscape of 10355 Science Center Drive. It discusses how the physical environment supports innovation and employee productivity. Through detailed photographs and architectural plans, readers learn about the integration of sustainability and modern design principles.

4. Startups and Innovation at 10355 Science Center Drive

Highlighting the vibrant startup ecosystem within 10355 Science Center Drive, this book profiles several pioneering companies that began their journey there. It covers the challenges and successes faced by entrepreneurs and the support systems available, such as incubators and networking events. The book serves as inspiration for aspiring innovators.

5. Environmental Sustainability Practices at 10355 Science Center Drive

This book investigates the environmental initiatives implemented at 10355 Science Center Drive, focusing on green building practices, energy efficiency, and waste reduction. It provides case studies on how businesses at the center contribute to sustainability goals. The text offers practical suggestions for other science parks aiming to reduce their environmental footprint.

6. Workplace Culture and Innovation: Insights from 10355 Science Center Drive

Examining the dynamic workplace culture at 10355 Science Center Drive, this book discusses how collaboration, diversity, and creativity drive innovation. It includes interviews with employees and management from various companies located at the center. Readers learn strategies to cultivate a thriving work environment in science and technology sectors.

7. Economic Impact of Science Centers: The Case of 10355 Science Center Drive

This book analyzes the economic contributions of 10355 Science Center Drive to its surrounding community and beyond. It presents data on job creation, business growth, and technological exports. The book is a valuable resource for policymakers and economic developers interested in leveraging science centers for regional growth.

8. Technology Transfer and Commercialization at 10355 Science Center Drive

Focusing on the process of technology transfer, this book explores how innovations developed at 10355 Science Center Drive move from labs to market. It covers partnerships between research institutions and private companies, intellectual property management, and commercialization strategies. The book is essential for researchers and business leaders alike.

9. The Future of Science Parks: Lessons from 10355 Science Center Drive

Looking ahead, this book discusses emerging trends and future directions for science parks, using 10355 Science Center Drive as a model. Topics include smart infrastructure, digital transformation, and global collaboration. The book encourages readers to envision the next generation of innovation hubs.

10355 science center drive: The Molecular Pathology of Autoimmune Diseases Argyrios N Theofilopoulos, Constantin A. Bona, 2002-12-06 Remarkable advances have been made in the pathogenesis of autoimmunity, such as with bone marrow transplantation, which is becoming a powerful strategy in treating certain life-threatening diseases. The Molecular Pathology of Autoimmune Diseases is a concise and centralized resource for information on the topic, with a special focus on the molecular and genetic basis of these disorders. Dozens of international experts devote themselves to illuminating the reader in this volume, with discussions on the basic aspects of autoimmune processes to systemic and organ-specific diseases. This volume is an invaluable reference to students and professionals in immunology and related fields.

10355 science center drive: Neuronal Death by Accident or by Design C.E. Henderson, D. Green, J. Mariani, Y. Christen, 2013-03-14 Four chapters represent the intense current effort to understand the way in which the mitochondrion controls the activation of the final stages of cell death. Another four articles attack the problem from the other side. How do specific insults in particular human or mouse neuro-degenerative diseases translate into mechanisms that will not only allow us to better understand what is happening in these patients but also, with luck, allow for development of more efficient and specific drugs in the future? Firstly, the concept of a central common cell death pathway, originally derived from studies on the nematode, has been an outstanding productive paradigm in bringing together different strands of research. Secondly, truly striking links have been made between results obtained in the culture dish (or even cell-free systems) and the diseased human brain.

10355 science center drive: Bioelectrochemical Systems Korneel Rabaey, Lars Angenent, Uwe Schroder, Jurg Keller, 2009-12-01 In the context of wastewater treatment, Bioelectrochemical Systems (BESs) have gained considerable interest in the past few years, and several BES processes are on the brink of application to this area. This book, written by a large number of world experts in the different sub-topics, describes the different aspects and processes relevant to their development. Bioelectrochemical Systems (BESs) use micro-organisms to catalyze an oxidation and/or reduction reaction at an anodic and cathodic electrode respectively. Briefly, at an anode oxidation of organic and inorganic electron donors can occur. Prime examples of such electron donors are waste organics and sulfides. At the cathode, an electron acceptor such as oxygen or nitrate can be reduced. The anode and the cathode are connected through an electrical circuit. If electrical power is harvested from this circuit, the system is called a Microbial Fuel Cell; if electrical power is invested, the system is called a Microbial Electrolysis Cell. The overall framework of bio-energy and bio-fuels is discussed. A number of chapters discuss the basics - microbiology, microbial ecology, electrochemistry, technology and materials development. The book continues by highlighting the plurality of processes based on BES technology already in existence, going from wastewater based reactors to sediment based bio-batteries. The integration of BESs into existing water or process lines is discussed. Finally, an outlook is provided of how BES will fit within the emerging biorefinery area.

10355 science center drive: Epitope Recognition Since Landsteiner's Discovery M. Eibl, W.R. Mayr, G.J. Thorbecke, 2012-12-06 Karl Landsteiner is best known for his discovery of the human blood groups. The revolutionary discoveries of this brilliant scientist in other fields have not received the recognition they deserve. His demonstration that poliomyelitis is transmissible showed the way of modern virology. His studies opening the field for epitope recognition, which he himself considered his main achievement, laid the foundation for research ongoing in our days. This book with its outstanding contributors is but a small tribute to this visionary scientist.

10355 science center drive: Generation and Effector Functions of Regulatory Lymphocytes Gregory R. Bock, Jamie A. Goode, 2004-01-19 Over the last several years, immunologists have re-discovered the importance of regulatory lymphocytes, formerly termed 'suppressor cells'. Many

recent reports have documented their existence, effector functions and potential therapeutic benefits in autoimmunity and transplantation. However, even though modern techniques have allowed us to get a much more detailed picture of these cells, they are still highly controversial. Several unresolved issues responsible for this dilemma are discussed in this book: it is difficult to grow and clone such cells, their phenotypes and effector functions are diverse and can sometimes easily be lost, and it is not well understood how they interact with antigen-presenting cells. This book contains contributions from leading investigators from around the world, including lively discussion of the current state of the art in studies of regulatory lymphocytes. Topics featured are the physiological control of autoimmunity, the role of antigen-specific cells in various diseases and disease models and effector mechanisms. Therapeutic applications are considered, particularly for type 1 diabetes, tissue transplantation and the control of viral infection. This important and groundbreaking book should be of interest to all immunologists. Related Novartis Foundation symposia: 254 Immunoinformatics: bioinformatic strategies for better understanding of immune function Chair: Hans-Georg Rammensee 256 Cancer and inflammation Chair: Siamon Gordon

10355 science center drive: The Autoimmune Diseases M. Eric Gershwin, George C. Tsokos, 2006-05-15 Since publication of the Third Edition in 1998, the understanding of the immune mechanisms underlying autoimmunity and autoimmune disease has significantly deepened and broadened. This Fourth Edition incorporates new material and combines common themes underlying inductive and effector mechanisms and therapies that relate generally to the autoimmune disorders. It discusses the biological basis of disease at genetic, molecular, cellular, and epidemiologic levels. New to This Edition: * Tissue-specific interventions to arrest or cure autoimmune disease * Bone marrow eradication and replacement * Both basic science and clinical medicine is covered * Boxed points to emphasize key features of each chapter

10355 science center drive: Lectins and Pathology Michel Caron, Annie-Pierre Seve, 2003-09-02 The present understanding of the various implications of lectins in pathology are summarised in this timely text. With contributions from leading investigators in the field of lectin research, *Lectins and Pathology* provides up-to-date information on key developments within this field, including the use of lectins and lectin-binding molecules as tools, the involvement of endogenous (animal or human) lectins in inflammation, cancer invasion and metastasis, as well as the importance of lectins in bacteriology and parasitology. This volume contains useful knowledge for clinical investigators, cell biologists, biochemists and biotechnologists, as well as for the graduate students interested in getting a comprehensive coverage of this field.

10355 science center drive: Signalling Pathways in Apoptosis Diane Watters, Martin Lavin, 2003-09-02 Apoptosis, or programmed cell death, is a necessary process by which a cell may die without adversely affecting its environment. It plays a crucial role in normal development, and in the body's defence mechanisms against disease. Too much cell death is destructive, leading to neurodegenerative diseases and impaired development. Conversely, too little cell death can lead to an increased susceptibility to cancer and sustained viral infection. Apoptosis is a matter of balance. Dramatic progress has been made in the study of apoptosis over the past decade. One of the most rapidly expanding knowledge bases being established is on the molecular mechanisms controlled by a variety of gene products including Bcl-2, caspases, death receptors, and proteolytic targets, as well as the central role of the mitochondrion. The major challenge in apoptosis research is how the protein products involved operate in an intricate web of signaling pathways that also play a crucial role in cell proliferation and differentiation. This book concentrates on elucidating these signal transduction mechanisms, an area not properly reviewed by other apoptosis texts.

10355 science center drive: Cell Proliferation and Apoptosis David Hughes, Huseyin Mehmet, 2004-03 *Cell Proliferation and Apoptosis* provides a detailed and novel practical guide to cell proliferation and apoptosis detection methods.

10355 science center drive: Apatites—Advances in Research and Application: 2012 Edition, 2012-12-26 *Apatites—Advances in Research and Application: 2012 Edition* is a ScholarlyBrief™ that delivers timely, authoritative, comprehensive, and specialized information

about Apatites in a concise format. The editors have built Apatites—Advances in Research and Application: 2012 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Apatites in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Apatites—Advances in Research and Application: 2012 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

10355 science center drive: *Apoptosis: Mechanisms and Role in Disease* Sharad Kumar, 1998-11-05 This volume deals with many of the recent advances made in uncovering the molecular and cellular basis of apoptosis and elaborates on how this accumulating knowledge is helping us to understand the significance of apoptosis in pathogenesis of diseases arising from inappropriate cell death. Further, mechanistic aspects of cell death and role of apoptosis in disease is covered.

10355 science center drive: *Induction and Modulation of Gastrointestinal Inflammation* A. Stallmach, M. Zeitz, W. Strober, Thomas MacDonald, H. Lochs, 1998-12-31 This book, the proceedings of Falk Symposium No. 104, organized in collaboration with the Society of Mucosal Immunology, and held in Saarbrücken, Germany, March 5-7 1998, is centered around the immunological mechanisms of mucosal protection and their disturbances leading to intestinal inflammation and destruction. This is a rapidly expanding field involving recent knowledge of basic immunology and cell biology as well as clinical observations. The conference and this book summarize very recent data in this field and suggest strategies for future research and clinical applications, and will be of interest to both basic scientists and clinicians.

10355 science center drive: *Science* John Michels (Journalist), 2010

10355 science center drive: *The Science and Applications of Synthetic and Systems Biology* Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2011-12-30 Many potential applications of synthetic and systems biology are relevant to the challenges associated with the detection, surveillance, and responses to emerging and re-emerging infectious diseases. On March 14 and 15, 2011, the Institute of Medicine's (IOM's) Forum on Microbial Threats convened a public workshop in Washington, DC, to explore the current state of the science of synthetic biology, including its dependency on systems biology; discussed the different approaches that scientists are taking to engineer, or reengineer, biological systems; and discussed how the tools and approaches of synthetic and systems biology were being applied to mitigate the risks associated with emerging infectious diseases. The Science and Applications of Synthetic and Systems Biology is organized into sections as a topic-by-topic distillation of the presentations and discussions that took place at the workshop. Its purpose is to present information from relevant experience, to delineate a range of pivotal issues and their respective challenges, and to offer differing perspectives on the topic as discussed and described by the workshop participants. This report also includes a collection of

individually authored papers and commentary.

10355 science center drive: Regulatory T Cells in Inflammation Leonie S. Taams, Arne N. Akbar, Marca H.M. Wauben, 2006-03-30 Regulatory T-cells are essential components of the immune system, and several different subsets of regulatory T-cells have been described. Considerable regulatory function has been attributed to the CD4+CD25+ T-cell subset. These cells act by suppressing adaptive and possibly innate immune responses thereby maintaining or restoring the balance between immunity and tolerance. The suppressive effects of CD4+CD25+ regulatory T-cells are cell-contact dependent. Recent developments and viewpoints in the field of CD4+CD25+ regulatory T-cells as well as the potential use of regulatory T-cells in immunotherapy of inflammatory diseases are discussed in this volume. By linking data from experimental models with recent findings from the clinic, this book will be of interest to immunologists and other biomedical researchers as well as clinicians interested in the regulation and manipulation of the immune response during inflammatory disease.

10355 science center drive: Functional Glycomics Minoru Fukuda, 2006-12-08 In the past decade, there has been an explosion of progress in understanding the roles of carbohydrates in biological systems. This explosive progress was made with the efforts in determining the roles of carbohydrates in immunology, neurobiology and many other disciplines, examining each unique system and employing new technology. This volume represents the second of three in the Methods in Enzymology series, including Glycobiology (vol. 415) and Glycomics (vol. 416), dedicated to disseminating information on methods in determining the biological roles of carbohydrates. These books are designed to provide an introduction of new methods to a large variety of readers who would like to participate in and contribute to the advancement of glycobiology. The methods covered include structural analysis of carbohydrates, biological and chemical synthesis of carbohydrates, expression and determination of ligands for carbohydrate-binding proteins, gene expression profiling including micro array, and generation of gene knockout mice and their phenotype analyses.

10355 science center drive: Autoimmune Liver Disease H.-P. Dienes, U. Leuschner, A.W. Lohse, M.P. Manns, 2005-07-12 Autoimmune processes in the liver can cause severe damage and destruction leading to cirrhosis and liver failure. The clinical spectrum of autoimmune liver disease is very wide, and diagnostic difficulties often stand at the beginning of the patient's medical career. While in autoimmune hepatitis immunosuppressive therapy has long been shown to be life-saving, therapeutic progress is small in primary biliary cirrhosis and questionable in primary sclerosing cholangitis. New approaches to treatment will be needed in the future, but require better understanding of the pathogenesis of the underlying disease process. This book, the proceedings of Falk Symposium 142 on 'Autoimmune Liver Disease' held in Freiburg, Germany, on 12-13 October 2004 (Part I of the Gastroenterology Week Freiburg), describes possible mechanisms of pathogenesis, discusses diagnostic criteria and takes up controversies concerning treatment options. In view of the relatively frequent manifestation of autoimmune hepatitis in childhood in particular, paediatric aspects of autoimmune liver disease, and the role of liver transplantation, are given prominence.

10355 science center drive: Molecular Mimicry, Microbes, and Autoimmunity Madeleine W. Cunningham, Robert S. Fujinami, 2000 A comprehensive review of molecular mimicry. - Presents the latest scientific developments in how molecular mimicry between infectious agents and host molecules can lead to autoimmunity. - Covers molecular mimicry and autoimmunity in the context of specific diseases. - Offers a better understanding of how microbes may lead to autoimmune diseases. - Reviews the most current thinking about microbial pathogens and how they trigger autoimmunity.

10355 science center drive: Signal Transduction Pathways in Autoimmunity A. Altman, A. N. Theofilopoulos, 2002-07 An immensely complex network of interactions between multiple cell types and cytokines regulates the immune system. Ligand binding to antigen-specific, Fc, or cytokine receptors initiates differentiation, activation and proliferation of multiple immune system cell lineages. These activating pathways are counteracted by inhibitory receptors. In the past two decades, considerable work on mechanistic and functional details of such intracellular signaling

pathways has led to the realization that an excess of stimulatory/positive signals as well as a deficiency in inhibitory/negative signals can both result in a hyperactive immune system leading to autoimmunity. The chapters included in this volume represent but a few examples of the close link between aberrant signaling pathways and autoimmune diseases. They cover a variety of cells (T, B and myeloid/monocytic cells), receptors (for antigen, Fc and cytokines) and intracellular signaling molecules (kinases, phosphatases, adapters and transcription factors) in the immune system. This book brings together clinical and experimental aspects of autoimmune disease and the fundamental science of intracellular signaling pathways. Therefore, it should be of interest to clinical investigators of autoimmune diseases as well as to basic immunologists and cell biologists interested in the molecular basis of signal transduction in the immune system.
