10 reasons to become a teacher: Moral and Political Values in Teacher Education over Time Nick Mead, 2022-08-19 This collection brings together international teacher educators to employ a ‘long view’ of an historic and values-based dialectic in teacher education. The authors reflect how employing historical consciousness to look back can offer greater continuity to teachers’ moral and political values within their training. The book draws on research from experienced teacher educators representing different historical, social and political contexts in North America, Europe, Asia as well in post-conflict South Africa. Within each section, the authors reflect on the development of the moral and political values of pre-service and in-service teachers in an era of global neo-liberalism and how this is inextricably bound up with the narratives of professionals in the past within their own national context. Each chapter takes a ‘long view’ of the role of historical consciousness in informing the moral and political values of pre-service and in-service teachers, providing examples of how international teacher educators can collectively support one another in restoring a vibrant, values-based dialectic within the processes, pedagogies and provision of

university and school-based training for which they are responsible. The 'long view' approach offers a compelling argument for the need to connect pre-service and in-service teachers' values and narrative to the legacy of professionals of the past. *Moral and Political Values in Teacher Education over Time* will be of great interest to researchers, academics and students in teacher education, comparative education and the history of education. It will also be of interest to international university and school-based teacher educators and policymakers in the field.

10 reasons to become a teacher: Scientific Sources and Teaching Contexts Throughout History: Problems and Perspectives Alain Bernard, Christine Proust, 2013-11-26 This book examines the textual, social, cultural, practical and institutional environments to which the expression "teaching and learning contexts" refers. It reflects on the extent to which studying such environments helps us to better understand ancient or modern sources, and how notions of "teaching" and "learning" are to be understood. Tackling two problems: the first, is that of certain sources of scientific knowledge being studied without taking into account the various "contexts" of transmission that gave this knowledge a long-lasting meaning. The second is that other sources are related to teaching and learning activities, but without being too precise and demonstrative about the existence and nature of this "teaching context". In other words, this book makes clear what is meant by "context" and highlights the complexity of the practice hidden by the words "teaching" and "learning". Divided into three parts, the book makes accessible teaching and learning situations, presents comparatist approaches, and emphasizes the notion of teaching as projects embedded in coherent treatises or productions.

10 reasons to become a teacher: Maverick for Life HENRY ERIC FIRDMAN, 2004-02-04 -- I had no way to know that my beloved bosses were active members of the infamous Rosenberg ring. I learned this much later, -- two years after my immigration to the States. I also learned then that in my ignorance I was in a good company with the FBI that wanted Joel Barr (a.k.a. Joe Berg) and Alfred Sarant (a.k.a. Phil Staros) since the late 1940s, but had no idea forty years later where these people were. The letter was delivered to Shuysky, Khrushchev's personal assistant, who -- promised to put it on Khrushchev's desk the day he comes back from his vacation. Unfortunately, when Khrushchev came back -- he was no longer the First Secretary of the Central Committee. A young, Jewish-looking man came out of the Consulate and looked at me. -- Three people surrounded me right away, and one of them said: Lets go. The last thing I saw was the Americans' frightened face, and then he darted back through the door. -- Another KGB operative with Lyalya at his side caught up with us. -- Apparently, KGB had our pictures. Now I had a chance to -- experience mundane, daily life in the United States. I would finally live in the country where everything was rational, logical, economically justified, and not prone to any ideological perversions. I would finally not feel like Gulliver in the Land of Idiots, as I characterized my life in the Soviet Union, and live among people thinking and acting like me. I was dead wrong.

10 reasons to become a teacher: Bold Ventures S. Raizen, E.D. Britton, 1996-12-31 This book presents comprehensive results from case studies of five innovations in science education that have much to offer toward understanding current reforms in this field. Each chapter tells the story of a case in rich detail, with extensive documentation, and in the voices of many of the participants-the innovators, the teachers, the students. Similarly, Volume 3 of *Bold Ventures* presents the results from case studies of five innovations in mathematics education. Volume 1 provides a cross-case analysis of all eight innovations. Many U.S. readers certainly will be very familiar with

the name of at least one if not all of the science innovations discussed in this volume-for example, Project 2061-and probably with their general substance. Much of the education community's familiarity with these arises from the projects' own dissemination efforts. The research reported in this volume, however, is one of the few detailed studies of these innovations undertaken by researchers outside the projects themselves. Each of the five studies was a large-scale effort involving teams of researchers over three years. These teams analyzed many documents, attended numerous critical project meetings, visited multiple sites, conducted dozens of individual interviews. The team leaders (Atkin, Huberman, Rowe), having spent much time with science education over long careers, looked at these innovations through many lenses. It was a daunting task for each team to sift through the mountains of detail in order to bring the most compelling themes to the surface.
