1983 events in history: Defense's Nuclear Agency 1947-1997 (DTRA History Series) Defense Threat Reduction Agency, 2003-09 This official history was originally printed in very small numbers in 2002. Defense's Nuclear Agency, 1947-1997 traces the development of the Armed Forces Special Weapons Project (AFSWP), and its descendant government organizations, from its original founding in 1947 to 1997. After the disestablishment of the Manhattan Engineering District (MED) in 1947, AFSWP was formed to provide military training in nuclear weapons' operations. Over the years, its sequential descendant organizations have been the Defense Atomic Support Agency (DASA) from 1959 to 1971, the Defense Nuclear Agency (DNA) from 1971 to 1996, and the Defense Special Weapons Agency (DSWA) from 1996 to 1998. In 1998, DSWA, the On-Site Inspection Agency, the Defense Technology Security Administration, and selected elements of the Office of Secretary of Defense were combined to form the Defense Threat Reduction Agency (DTRA).

1983 events in history: Event History Analysis Kazuo Yamaguchi, 1991-07-18 In a manner similar to many other titles within the Applied Social Research Methods Series, this 182-page book thoroughly covers many of the specific methodological hurdles encountered in implementing event history analysis (EHA). The Applied Social Research Methods Series' . . . is the result of careful subject selection. . . . Consistent with the practical orientation of the book, each of the application sections provides useful insights into data structure problems and programming notes. . . . Kazuo Yamaguchi's insightful review of problems in structuring EHA models is useful for those contemplating life-course research. . . . We strongly recommend its inclusion in the libraries of

marketing researchers and its inclusion on suggested reading lists of graduate research method seminars. --Journal of Marketing Research This book, which is part of Sage Publications' Applied Social Research Methods Series, is a practical guide for those interested in using event history analysis. . . . The book's strength is that it is well written and easy to understand. Even those with limited statistical backgrounds can follow the discussion and the systematic progression from the simpler to the more complex models (although the author provides ample references for those wanting a more rigorous discussion). . . . Upon finishing the book, I found myself wondering about specific accounting questions that might be addressed using event history analysis. There are many, and in fact, most issues can be recast in an events framework. . . . In sum, I recommend this book to anyone wanting to use event history analysis whether to apply to new research questions or to provide a fresh look at old questions. --The Accounting Review A significant introduction to the event-history literature that provides the background to implement this difficult methodology successfully and that can be supplemented with other, more advanced texts. It will undoubtedly become a prized text among students and a valuable reference for the research community. --Contemporary Sociology As a research tool event history analysis has recently become a key technique for researchers, professionals and students in a wide range of disciplines. However, despite this increasing interest, few resources exist which clearly examine this technique. Now, Event History Analysis provides a systematic introduction to models, methods and applications of event history analysis. Kazuo Yamaguchi emphasizes hands on information, including the use and misuse of samples, models, and covariates in applications, the structural arrangement of input data, the specification of various models in such computer programs as SAS-LOGIST and SPSS-LOGLINEAR, and the interpretation of parameters estimated from models. This timely book also offers such significant topics as missing data, hazard rate, Cox's partial likelihood model, survivor function, and discrete-time logit models for both one-way and two-way transitions. Event History Analysis is essential for researchers, professionals and students of public health, sociology, labor economics, political science, and organization studies.

1983 events in history: Event History Analysis Hans-Peter Blossfeld, Alfred Hamerle, Karl Ulrich Mayer, 2014-02-24 Serving as both a student textbook and a professional reference/handbook, this volume explores the statistical methods of examining time intervals between successive state transitions or events. Examples include: survival rates of patients in medical studies, unemployment periods in economic studies, or the period of time it takes a criminal to break the law after his release in a criminological study. The authors illustrate the entire research path required in the application of event-history analysis, from the initial problems of recording event-oriented data to the specific questions of data organization, to the concrete application of available program packages and the interpretation of the obtained results. Event History Analysis: * makes didactically accessible the inclusion of covariates in semi-parametric and parametric regression models based upon concrete examples * presents the unabbreviated close relationship underlying statistical theory * details parameter-free methods of analysis of event-history data and the possibilities of their graphical presentation * discusses specific problems of multi-state and multi-episode models * introduces time-varying covariates and the question of unobserved population heterogeneity * demonstrates, through examples, how to implement hypotheses tests and how to choose the right model.

1983 events in history: Chronology of Twentieth-Century History: Business and Commerce Frank N. Magill, 2014-04-23 First Published in 2004. Volume II provides the hard facts and the history behind the headlines; significant 20th-century events in the evolution of all aspects of business and commerce are described in chronologically-arranged articles. The text of each article is divided into two sections: Summary of the Event describes the event itself and the circumstances leading up to it, and Impact of the Event analyzes the influence of the event on the evolution of business practice or on a major industry in both the short and long terms. Each article concludes with a fully annotated Bibliography.

1983 events in history: Eastern Trade and the Mediterranean in the Middle Ages Thomas

Sinclair, 2019-12-06 At the end of the High Middle Ages in Europe, with buying power and economic sophistication at a high, an itinerary detailing the toll stations along a commercial artery carrying eastern goods (from China, India and Iran) towards Europe was compiled, and later incorporated in the well-known trading manual of the Florentine bank official Pegolotti; Pegolotti was twice stationed in the city of Famagusta in Cyprus, which lay opposite the city of Ayas where the land route ended. The Il-Khanid capital, Tabriz in Iran, attracting expensive merchandise such as spices and silk from a variety of origins, was the road's starting-point. To demonstrate the importance of the route in its own time, parallel and contemporary routes in the Black Sea and the Levant are traced and the effect of trade on their cities noted. To compare the Ayas itinerary (1250s to 1330s) with previous periods the networks of commercial avenues in the previous period (1100-1250) and the subsequent one (1340s to 1500) are reconstructed. In each period the connection of east-west trade with the main movements of the European economy are fully drawn out, and the effects on the building history of the three main Italian cities concerned (Venice, Genoa and Florence) are sketched. Attention then turns to the Pegolotti itinerary itself. The individual toll stations are identified employing a variety of means, such as names taken from the Roman itineraries (Peutinger Table and Antonine Itinerary) and archaeological data; this allows the course of the track to be followed through diverse topography to the city of Sivas, then across plains and through passes to Erzurum and finally to Tabriz. A picture is drawn of the urban history of each major city, including Sivas, Erzurum and Tabriz itself, and of the other towns along the route.

1983 events in history: Realism and Power (Routledge Revivals) Alison Lee, 2014-07-11 First published in 1990, this study focuses on the subversive techniques of British postmodernist fiction and examines its challenge to Realist traditions, and the liberal humanist ideology behind it. Exploring the concept of literary postmodernism, and the strategies and philosophies to which it has given rise, Alison Lee investigates how they are developed in a selection of contemporary British novels, including *Midnight's Children*, *Waterland*, *Flaubert's Parrot*, and *Lanark*. Postmodernism is considered in relation to history, the visual and performing arts, popular culture, including advertising, music videos, and popular fiction, notably Stephen King's *Misery*. A detailed and comprehensive study, this reissue of *Realism and Power* will be essential reading for students of literary and cultural studies.

1983 events in history: A History of Existential Psychology Zoltán Kőváry, 2024-12-30 The first in a two-part set, this book takes a deep dive into the history and theory of existential psychology. Beginning with a discussion of the "existentialism and psychology problem," the book

presents the philosophical and historical roots of existential psychology. It introduces the most important philosophical schools in the development of existentialism and their creators, such as Kierkegaard, Nietzsche, Heidegger and Sartre, as well as the literary roots of existentialism in the writings of Dostoevsky and Kafka and the important contribution of psychoanalysis and phenomenological psychiatry. The book then goes on to look at the existential psychology schools, including daseinsanalysis, logotherapy and existential analysis, the existential-humanistic school and the existential-phenomenological school. Going beyond the questions of therapy and counseling that typically make up the study of existential psychology, the book offers the ultimate introduction for students and scholars of this fascinating and deeply rooted discipline. It may also interest professionals working in related fields.

1983 events in history: The Western Time of Ancient History Alexandra Lianeri, 2011-03-31 This book examines the conceptual and temporal frames through which modern Western historiography has linked itself to classical antiquity. In doing so, it articulates a genealogical problematic of what history is and a more strictly focused reappraisal of Greek and Roman historical thought. Ancient ideas of history have played a key role in modern debates about history writing, from Kant through Hegel to Nietzsche and Heidegger, and from Friedrich Creuzer through George Grote and Theodor Mommsen to Momigliano and Moses Finley; yet scholarship has paid little attention to the theoretical implications of the reception of these ideas. The essays in this collection cover a wide range of relevant topics and approaches and boast distinguished authors from across Europe in the fields of classics, ancient and modern history and the theory of historiography.

1983 events in history: Techniques of Event History Modeling Hans-Peter Blossfeld, G"tz Rohwer, 2001-09-01 Including new developments and publications which have appeared since the publication of the first edition in 1995, this second edition: *gives a comprehensive introductory account of event history modeling techniques and their use in applied research in economics and the social sciences; *demonstrates that event history modeling is a major step forward in causal analysis. To do so the authors show that event history models employ the time-path of changes in states and relate changes in causal variables in the past to changes in discrete outcomes in the future; and *introduces the reader to the computer program Transition Data Analysis (TDA). This software estimates the sort of models most frequently used with longitudinal data, in particular, discrete-time and continuous-time event history data. Techniques of Event History Modeling can serve as a student textbook in the fields of statistics, economics, the social sciences, psychology, and the political sciences. It can also be used as a reference for scientists in all fields of research.

1983 events in history: Event History Analysis With Stata Hans-Peter Blossfeld, Katrin Golsch, Gotz Rohwer, 2007-02-02 Event History Analysis With Stata provides an introduction to event history modeling techniques using Stata (version 9), a widely used statistical program that provides tools for data analysis. The book emphasizes the usefulness of event history models for causal analysis in the social sciences and the application of continuous-time models. T

Organized alphabetically, the Encyclopedia of Social Science Research Methods covers research terms ranging from different methodological approaches to epistemological issues and specific statistical techniques. Written to be accessible to general readers, the Encyclopedia entries do not require advanced knowledge of mathematics or

statistics to understand the purposes or basic principles of any of the methods. To accomplish this goal, there are two major types of entries: definitions consisting of a paragraph or two to provide a quick explanation of a methodological term; and topical treatments or essays that discuss the nature, history, applications, and implications of using a certain method, including suggested readings and references. Readers are directed to related topics via cross-referenced terms that appear in small capital letters. By assembling entries of varied origins and serving different research purposes, readers will be able to benefit from this immense source of methodological expertise in advancing their understanding of research. With three volumes and more than 900 signed entries, the Encyclopedia of Social Science Research Methods will be a critical addition to any social science library.
