the impact of globalization and intensification of information technology, the ideas and practices of enterprise management are also changing rapidly nowadays. A practice that was incompletely unheard of yesterday may soon become a model for everyone to learn from tomorrow. The development of information technology has blurred the boundaries between work and non-work, and employees today have more options to work from home. At the same time, the family structure has also become more diversified, with different types of income structures, bringing many possibilities for work and family care models. In addition, the government's social policies, such as school-to-work transitional regulations and the extended retirement age, suggest that people today may face a quite different labor market situation, compared to other generations. As individuals are facing longer and more complicated working life, it is very important to ensure their long-term employability by creating a healthy and successful career.
