Types of Bell Bicycle Computers

Bell offers both wired and wireless bicycle computers. Wired models connect via a sensor and a wire running to the handlebar-mounted computer, while wireless models use radio frequency or Bluetooth technology to transmit data without physical cables. Each type has its advantages depending on rider preferences and bike setup.

Key Features

The main features of Bell bicycle computers often include:

- Current speed display
- Average speed calculation

- Maximum speed recording
- Trip distance and total distance tracking

Installation and Setup Process

Proper installation and setup of the Bell bicycle computer are crucial for accurate data collection and device longevity. The process involves mounting the computer and sensor, calibrating wheel size, and configuring settings specific to the rider's bike.

Unboxing and Components

Inside the Bell bicycle computer package, you will typically find:

- The computer unit
- Wheel sensor
- Magnet for the spoke
- Mounting brackets and straps

Mounting the Computer and Sensor

The computer is usually mounted on the handlebar or stem using adjustable brackets. The sensor is attached to the front fork and aligned with the magnet fixed on a spoke. Proper alignment ensures that the sensor detects each wheel revolution accurately.

Calibrating Wheel Size

Wheel size calibration is vital for accurate speed and distance readings. The manual will guide you to measure your wheel circumference in millimeters or select from a preset list based on your tire size. Entering the correct wheel size into the computer ensures the device converts wheel rotations into distance correctly.

Operating Your Bell Bicycle Computer

Once installed and calibrated, understanding how to operate the Bell bicycle computer is necessary to access its full range of functions. The device typically features buttons for cycling through different data displays and settings.

Basic Controls and Display Information

The computer's screen displays various metrics that can be toggled using buttons. Common displays include current speed, trip distance, total distance, ride time, and average speed. Some models also offer backlighting for nighttime visibility.

Starting and Stopping the Device
