berkeley family practice patient portal: Prospects for the Professions in China William P Alford, William Kirby, Kenneth Winston, 2010-10-07 Professionals are a growing group in China and increasingly make their presence felt in governance and civil society. At the same time, however, professionals in the West are under increasing pressure from commercialism or scepticism about their ability to rise above self-interest. This book focuses on professionals in China and asks whether developing countries have a fateful choice: to embrace Western models of professional organization as they now exist, or to set off on an independent path, adapting elements of Western practices to their own historical and cultural situation. In doing so, the authors in this volume discuss a wealth of issues, including: the historic antecedents of modern Chinese professionalism; the implications of professionalism as an import in China; the impact of socialism, the developmental state and rampant commercialism on the professions in China; and the feasibility of liberal professions in an illiberal state. To conclude, the book considers whether there might be an emerging professionalism with Chinese characteristics, and how this might have an impact on the professions elsewhere. *Prospects for the Professions in China* will be of interest to students and scholars of Chinese Studies, law, sociology, medical studies and cultural studies.

berkeley family practice patient portal: Chinese and Indian Medicine Today Md. Nazrul Islam, 2017-04-04 This book discusses Asian medicine, which puts enormous emphasis on prevention and preservation of health, and examines how, in recent decades, medical schools in Asia have been increasingly shifting toward a curative approach. It offers an ethnographic investigation of the scenarios in China and India and finds that modern students and graduates in these countries perceive Asian medicine to be as important as Western medicine. There is a growing tendency to integrate Asian medicine with Western medical thought in the academic curriculum that has led to a gradual decline of Asian medical thought and practices. At the same time, there has been a massive rise in patent drugs, health products and cosmetics being sold under the brand names of Asian medicine or herbal medicine. Most of these drugs and health products do not follow the classical formulas found in the Asian medical texts. The book analyses these texts and concludes that contemporary Asian medicine rarely follows the classical texts, and in fact uses Asian medicine brands to sell Western health products and practices. With a particular focus on the formal and professional sector of Chinese herbal medicine and Indian ayurvedic medicine in urban areas, this book appeals to a broad readership, including undergraduate students and academics as well as non-experts. Md. Nazrul Islam is an Associate Professor in the General Education Office, United International College, Beijing Normal University-Hong Kong Baptist University. He was a Visiting Associate Professor in the School of Population and Public Health, University of British Columbia (2015-16) during which time he completed this book manuscript.

Building on Carl Jung's groundbreaking work on this phenomenon, Beitman applies new insights on coincidence, synchronicity, serendipity, and related phenomena to the contemporary age, ultimately helping readers begin to better identify patterns of synchronicity in their own lives, find deeper meaning, and more consciously align with their personal life path and goals. The unlikely trajectory of the author's own life reveals the strange and counterintuitive nature of synchronicity. From Wilmington, Delaware, to 1960s-era San Francisco, Beitman explores his experience with precognition and telepathy while playing high school football, his life as a psychiatric medical school student and hippie in Haight-Ashbury, and his rise to become head of psychiatry at University of Missouri-Columbia Medical School while developing The Coincidence Project. As well as providing questions for readers to reflect on, throughout the book Beitman provides additional tools to illustrate synchronicity, offering insightful comments and principles in each section to synthesize useful reflections that serve as a guide for readers' own coincidence diaries.

berkeley family practice patient portal: Have a Good Trip Eugenia Bone, 2024-10-22 From a much-loved expert and popular science writer comes this straight-from-the-trenches report on how and why folks from all walks of life are using magic mushrooms to enhance their lives. Interest in psychedelic mushrooms has never been greater - or the science less definitive. Popular science

writer and amateur mycologist Eugenia Bone reports on the state of psychedelics today, from microdosing to heroic trips, illustrating how “citizen science” and anecdotal accounts of the mushrooms’ benefits are leading the new wave of scientific inquiry into psilocybin. With her signature blend of first-person narrative and scientific rigor, Bone breaks down just how the complicated cocktail of psychoactive compounds is thought to interact with our brain chemistry. She explains how mindset and setting can impact a trip – whether therapeutic, spiritual/mystical, or simply pleasure seeking – and vividly evokes the personalities and protocols that populate the tripping scene, from the renegade “Noccers” of Washington who merrily disperse magic mushroom spores around Seattle, to the indigenous curanderas who conduct traditional ceremonies in remote Mexican villages. Throughout she shares her journey through the world of mushrooms, cultivating her own stash, grappling with personal challenges, and offering the insights she gleaned from her experiences. For both seasoned trippers and the merely mushroom curious, *Have a Good Trip* offers a balanced, entertaining, and provocative look at this rapidly evolving cultural phenomenon.

berkeley family practice patient portal: Your Deepest Ground John J. Prendergast, PhD, 2025-03-11 A guide to connecting with your deepest ground—a rootedness that supports authentic psychological healing and embodied spirituality “This beautiful and deeply insightful work invites us to reconnect with our true ground—a place of inner stability and peace that lies beyond fear.” —Tara Brach, author of *Radical Acceptance* In John J. Prendergast’s decades of experience as a psychotherapist and spiritual teacher, the area of the body that’s most difficult for people to connect with, given our survival fear and trauma, is our physical and energetic ground. This area in the lower belly and at the base of the spine corresponds with the root chakra in the Indian subtle body tradition, the lower dan tien in Taoism, and the hara in Japanese martial arts. While most spiritual traditions focus on opening the mind and the heart, they tend to avoid or undervalue the opening of the ground. Prendergast notes, “It remains largely unconscious and deeply defended.” This guide invites you to take a deep dive into your personal, archetypal, and universal ground, and to see through the false ground of your early conditioning and limited identity. Throughout *Your Deepest Ground*, Prendergast shares:

- Profound yet accessible teachings to help you connect with your ground
- Sensitive awareness to the trauma we’re often holding in this part of our physical and energetic body
- Sensing and inquiry practices to work with your own body and life
- Authentic anecdotes and conversations drawn from his teaching that show the power of this work in action

By consciously opening to our ground, we can experience a felt sense of inner safety and stability that supports the full flowering of inner peace, freedom, and loving awareness—a truly embodied spirituality.

berkeley family practice patient portal: Refuge and Resilience Laura Simich, Lisa Andermann, 2014-06-05 Taking an interdisciplinary approach and focusing on the social and psychological resources that promote resilience among forced migrants, this book presents theory and evidence about what keeps refugees healthy during resettlement. The book draws on contributions from cultural psychiatry, anthropology, ethics, nursing, psychiatric epidemiology, sociology and social work. Concern about immigrant mental health and social integration in resettlement countries has given rise to public debates that challenge scientists and policy makers to assemble facts and solutions to perceived problems. Since the 1980s, refugee mental health research has been productive but arguably overly-focused on mental disorders and problems rather than solutions. Social science perspectives are not well integrated with medical science and treatment, which is at odds with social reality and underlies inadequacy and fragmentation in policy and service delivery. Research and practice that contribute to positive refugee mental health from Canada and the U.S. show that refugee mental health promotion must take into account social and policy contexts of immigration and health care in addition to medical issues. Despite traumatic experiences, most refugees are not mentally ill in a clinical sense and those who do need medical attention often do not receive appropriate care. As recent studies show, social and cultural determinants of health may play a larger role in refugee health and adaptation outcomes than do biological factors or pre-migration experiences. This book’s goal therefore is to broaden the refugee

mental health field with social and cultural perspectives on resilience and mental health.

berkeley family practice patient portal: Ethical Consumption James G. Carrier, Peter Luetchford, 2012 Increasingly, consumers in North America and Europe see their purchasing as a way to express to the commercial world their concerns about trade justice, the environment and similar issues. This ethical consumption has attracted growing attention in the press and among academics. Extending beyond the growing body of scholarly work on the topic in several ways, this volume focuses primarily on consumers rather than producers and commodity chains. It presents cases from a variety of European countries and is concerned with a wide range of objects and types of ethical consumption, not simply the usual tropical foodstuffs, trade justice and the system of fair trade. Contributors situate ethical consumption within different contexts, from common Western assumptions about economy and society, to the operation of ethical-consumption commerce, to the ways that people's ethical consumption can affect and be affected by their social situation. By locating consumers and their practices in the social and economic contexts in which they exist and that their ethical consumption affects, this volume presents a compelling interrogation of the rhetoric and assumptions of ethical consumption.

berkeley family practice patient portal: Time, Consumption and the Coordination of Everyday Life Dale Southerton, 2020-08-17 Time pressure, speed and the desire for instant consumption pervade accounts of contemporary lives. Why is it that people feel pressed for time, in what ways have societies changed to create this condition, and with what implications? This book examines critical contentions in the field of time and society, ranging from the emergence and dominance of 'clock time' and time discipline, the time pressures associated with consumer culture, through to technological innovation and the acceleration of everyday lives. Through extensive analysis of empirical studies of the changing ways in which people organise and experience home, work, leisure, consumption and personal relationships, time pressure is shown to be a problem of the coordination and synchronization of activities. Appreciation of temporal rhythms – formed and reproduced through the organisation and performance of social practices – is necessary to tackle the challenges of coordination, and offers new avenues for analysing social issues such as sustainable consumption, health and well-being. This book is essential reading for all of those interested in social change, consumption and time, including researchers and students from across the social sciences.
