**berkeley research group glassdoor: Research Methods for Digital Work and Organization** Gillian Symon, Katrina Pritchard, Christine Hine, 2021-10-21 Digital work has become increasingly common, taking a wide variety of forms including working from home, mobile work, gig work, crowdsourcing, and online volunteering. It is organizationally, interpretively, spatially, and temporally complex. An array of innovative methodologies have begun to emerge to capture this complexity, whether through re-purposing existing tools, devising entirely novel methods, or mixing old and new. This volume brings together some of these techniques in an accessible sourcebook for management, business, organizational, and work researchers. It presents a range of innovative methods which capture and analyse digitally-related work practices through reflexive accounts of real-world research projects, and elucidates the range of challenges such methods may raise for research practice. It outlines debates and recommendations, and provides further reading and information to support research practice. The book is organised in four sections that reflect different areas of focus and methodological approaches: working with screens; digital

working practices; distributed work and organizing; and digital traces of work. It then concludes by reflecting on the methodological issues, research ethics, requisite skills, and future of research given the intensification of digital work during a global pandemic that has impacted all aspects of our lives.

Scholars from each discipline see lean production as positive or negative; the book blends theory with practice by sorting out these different academic views and revealing how lean is implemented in different ways. The first part synthesizes academic research from a range of disciplines—including, engineering, sociology, and management—to present the reader with an integrated understanding of the benefits and drawbacks of lean management. The second part links this theory to practice, with a set of case studies from companies like Apple, Google, Nike, Toyota, and Walmart that demonstrate how lean is implemented in a variety of settings. The book concludes with three models, explaining how Toyotism, Nikefication with offshoring, and Waltonism provide full or less complete models of lean production. It clearly presents the positive and negative aspects of lean and insights into the culture of lean organizations. With its rich interdisciplinary approach, *Framing and Managing Lean Organizations in the New Economy* will benefit researchers and students across a range of classes from management, sociology, and public policy to engineering.

Section on Organizations, Occupations, and Work Winner, 2021 PROSE Award in the Business, Finance & Management Category A behind-the-scenes examination of Asian Americans in the workplace In the classroom, Asian Americans, often singled out as so-called “model minorities,” are expected to be top of the class. Often they are, getting straight As and gaining admission to elite colleges and universities. But the corporate world is a different story. As Margaret M. Chin reveals in this important new book, many Asian Americans get stuck on the corporate ladder, never reaching the top. In *Stuck*, Chin shows that there is a “bamboo ceiling” in the workplace, describing a corporate world where racial and ethnic inequalities prevent upward mobility. Drawing on interviews with second-generation Asian Americans, she examines why they fail to advance as fast or as high as their colleagues, showing how they lose out on leadership positions, executive roles, and entry to the coveted boardroom suite over the course of their careers. An unfair lack of trust from their coworkers, absence of role models, sponsors and mentors, and for women, sexual harassment and prejudice especially born at the intersection of race and gender are only a few of the factors that hold Asian American professionals back. Ultimately, Chin sheds light on the experiences of Asian Americans in the workplace, providing insight into and a framework of who is and isn’t granted access into the upper echelons of American society, and why.
