Asaf Adi, Suzette Stoutenburg, Said Tabet, 2005-11-04 RuleML 2005 was the first international conference on rules and rule markup languages for the Semantic Web, held in conjunction with the International Semantic Web Conference (ISWC) at Galway, Ireland. With the success of the RuleML workshop series came the need for extended research and applications topics organized in a conference format. RuleML 2005 also accommodated the first Workshop on OWL: Experiences and Directions. Rules are widely recognized to be a major part of the frontier of the Semantic Web, and critical to the early adoption and applications of knowledge-based techniques in business, especially enterprise integration and B2B e-commerce. This includes knowledge representation (KR) theory and algorithms; markup languages based on such KR; engines, translators, and other tools; relationships to standardization efforts; and, not least, applications. Interest and activity in the area of rules for the Semantic Web has grown rapidly over the last five years. The RuleML 2005 Conference was aimed to be this year's premier scientific conference on the topic. It continued in topic, leadership, and collaboration with the previous series of three highly successful annual international workshops (RuleML 2004, RuleML 2003 and RuleML 2002). The theme for RuleML 2005 was rule languages for reactive and proactive rules, complex event processing, and event-driven rules, to support the emergence of Semantic Web applications. Special highlights of the RuleML 2005 conference included the keynote address by Sir Tim Berners-Lee, Director of W3C.

benjamin institute of technology: Benjamin's Passages Alexander Gelley, 2014-12-15 In transposing the Freudian dream work from the individual subject to the collective, Walter Benjamin

projected a “macrocosmic journey” of the individual sleeper to “the dreaming collective, which, through the arcades, communes with its own insides.” Benjamin’s effort to transpose the dream phenomenon to the history of a collective remained fragmentary, though it underlies the principle of retrograde temporality, which, it is argued, is central to his idea of history. The “passages” are not just the Paris arcades: They refer also to Benjamin’s effort to negotiate the labyrinth of his work and thought. Gelley works through many of Benjamin’s later works and examines important critical questions: the interplay of aesthetics and politics, the genre of *The Arcades Project*, citation, language, messianism, aura, and the motifs of memory, the crowd, and awakening. For Benjamin, memory is not only antiquarian; it functions as a solicitation, a call to a collectivity to come. Gelley reads this call in the motif of awakening, which conveys a qualified but crucial performative intention of Benjamin’s undertaking.

benjamin institute of technology: *Whole System Design* Peter Stansinopoulos, Michael Smith, Karlson Hargroves, Cheryl Desha, 2013-01-11 *Whole System Design* is increasingly being seen as one of the most cost-effective ways to both increase the productivity and reduce the negative environmental impacts of an engineered system. A focus on design is critical, as the output from this stage of the project locks in most of the economic and environmental performance of the designed system throughout its life, which can span from a few years to many decades. Indeed, it is now widely acknowledged that all designers - particularly engineers, architects and industrial designers - need to be able to understand and implement a whole system design approach. This book provides a clear design methodology, based on leading efforts in the field, and is supported by worked examples that demonstrate how advances in energy, materials and water productivity can be achieved through applying an integrated approach to sustainable engineering. Chapters 1-5 outline the approach and explain how it can be implemented to enhance the established Systems Engineering framework. Chapters 6-10 demonstrate, through detailed worked examples, the application of the approach to industrial pumping systems, passenger vehicles, electronics and computer systems, temperature control of buildings, and domestic water systems. Published with The Natural Edge Project, the World Federation of Engineering Organizations, UNESCO and the Australian Government.

benjamin institute of technology: *Consuming Glory* Gannon Murphy, 2006-09-22 In the late 1990s, Open Theism took the theological world by storm. Advocated by several prominent theologians, among them Clark H. Pinnock, the view argues that human beings cannot have a genuine relationship with God if God possesses what classical theology has affirmed to be exhaustive foreknowledge of future events. Such foreknowledge, open theists claim, would make human freedom (and salvation itself) meaningless and divine power akin to little more than meaningless, cosmic puppeteering. While several works have taken the important step of addressing open theism’s scriptural deficiencies in its denial of God’s foreknowledge, none have dealt with the vital issue of divine-human relationality and how it can be understood in a classical, orthodox framework that maintains such foreknowledge. *Consuming Glory* remedies that lack by first providing a fresh critique of open theism using Clark Pinnock’s version of it as representative, but then offering a reconstruction of divine-human relationality centered on the Biblical principle of *Christus in nobis* (Christ in us). *Christus in nobis* is coupled with an outworking of meticulous divine providence that serves God’s own self-glorifying orientation. It reverses the relational ordering advocated in open theism by grounding human love of God theologically rather than anthropologically. Love of God and divine-human relationality is established precisely because it is God’s own self-love that is providentially given to us and thus reciprocated as believers are brought into adoptive communion with the Triune Godhead. Drawing on diverse resources throughout the corpus of historical theology, Murphy concludes that divine-human relationality can be summarized as God delighting in himself, in us.
