**best practice energy llc: College of Commercial Arbitrators Guide to Best Practices in Commercial Arbitration - Third Edition** James M. Gaitis, Carl F. Ingwalson, Jr., Vivien B. Shelanski, 2014-01-01 This third edition of The College of Commercial Arbitrators Guide to Best Practices in Commercial Arbitration has been substantially expanded not only to ensure that it is up to date but, also, to incorporate several new chapters on diverse subjects, including intratribunal relations, arbitrators' fees, eDiscovery, and hybrid arbitration processes. Summary of New Material •Twice as long as the second edition •Substantial revision and expansion of existing chapters •Four new chapters (Arbitrators Fees & Expenses, eDiscovery, Intratribunal Relations, Hybrid Arbitration Proceedings) •Updated to take into account evolving case law and to address newly emerging issues relating to the management of commercial arbitrations •Comparative tables regarding certain aspects of in major international rules and international arbitration institution policies •Revised to take into account: ♦The new 2013 CPR Administered Arbitration Rules ♦The 2013 revisions to the AAA Commercial Rules ♦Various protocols and guidelines relating to domestic commercial arbitration ♦The 2011 revisions to the JAMS International Rules ♦The 2012 revisions to the ICDR Articles ♦The 2010 revisions to the UNCITRAL Rules ♦The 2013 IBA Guidelines on Party Representation in International Arbitration ♦The 2010 revisions to the IBA Rules on the Taking of Evidence in International Arbitration ♦Various protocols and guidelines relating to domestic commercial arbitration The aim of the Guide is to identify best practices that arbitrators can employ to provide users of arbitration with the highest possible standards of economy and fairness in the disposition of business disputes. This third edition of the Guide refines the guidance contained in the first and second editions to take into account developing case law, revised institutional rules, advancements in arbitration techniques and thinking, and also addresses newly evolving issues such as electronic discovery. There are significant differences in the ways in which arbitrations are conducted in different substantive fields of commerce and among different arbitrators in the same field. Techniques that are appropriate and useful in one case may be quite unsuited to another. For this reason, it is not possible to prescribe a single set of best practices that commercial arbitrators should invariably follow in every case. Rather, this Guide attempts to identify the principal issues that typically arise in each successive stage of an arbitration and to explain the pros and cons of various preferred ways of handling each issue. From this perspective, the best practice for an arbitrator is to carefully consider the merits of alternative techniques available for dealing with a particular issue and to then select the technique best suited to the situation. In addition, the Guide attempts to identify the full array of practices available for use in complex arbitrations, which can be adapted and streamlined for simpler cases. Formed in 2001, the College of Commercial Arbitrators is a non-profit organization composed of prominent, experienced commercial arbitrators who believe that a national association of commercial arbitrators can provide a meaningful contribution to the profession, to the public, and to the businesses and lawyers who depend on arbitration as a primary means of dispute resolution. Its mission includes promoting professionalism and high ethical practice in commercial arbitration, adopting and maintaining standards of conduct, providing peer training and professional development, and developing and publishing best practices materials. This

work is the College's principal vehicle for fulfilling several aspects of its mission. Many seasoned and knowledgeable practitioners generously contributed their time and insights to the creation of this Guide.

**best practice energy llc: *Energy, Policy, and the Environment*** Marja Järvelä, Sirkku Juhola, 2011-09-01 This book sets the questions of energy and the environment in the North in the global context and further addresses historical developments, views on energy taxation and tariffs, and effects of EU energy policy. Climate change appears more frequently than ever on the top of global and national policy agendas. In the current situation traditional environmental concern and environmental policy may not suffice in the face of the global challenge as manifested by climate change and the depletion of fossil energy resources. But as new data comes to light, new energy policies and changes in economic structures are crucial for putting into action global climate policy. Crucial tasks in environmental policy are the sustainable utilisation of natural resources and the conservation of natural and human-made habitats. One of the areas of the world where this comes into play the most is in the Nordic countries. Northern societies are predominantly high tech, high consumption and high energy supply societies. And with the transition from older energy sources (wood for heating and stream water for power production) to newer ones (oil and nuclear energy) discussions on the environmental impact have led to public and corporate action. The Northern countries have been at the forefront in finding sustainable alternatives to solve conflicts arising from the rise in energy needs. However, these countries have taken different pathways with different policies in attempting to achieve this. As the needs and concerns from climate change arise, a Northern dimension, involving policies that contrast to European and global trends, emerges. *Energy, Policy, and the Environment: Modeling Sustainable Development for the North* explores that dimension.
