**best physics channel on youtube: The Best American Infographics 2016** Gareth Cook, Robert Krulwich, 2016-10-04 "When it comes to infographics...the best work in this field grabs those eyes, keeps them glued, and the grip is sensual—and often immediate. A good graphic says 'See what I see!' and either you do or you don't. The best ones...pull you right in, and won't let you go." —From the introduction by Robert Krulwich The year's most "awesome" (RedOrbit) infographics reveal aspects of our world in often startling ways—from a haunting graphic mapping the journey of 15,790

slave ships over 315 years, to a yearlong data drawing project on postcards that records and cements a trans-Atlantic friendship. The Best American Infographics 2016 covers the realms of social issues, health, sports, arts and culture, and politics—including crisp visual data on the likely Democratic/Republican leanings of an array of professions (proving that your urologist is far more likely to be a Republican than your pediatrician). Here once again are the most innovative print and electronic infographics—“the full spectrum of the genre—from authoritative to playful” (Scientific American). ROBERT KRULWICH is the cohost of Radiolab and a science correspondent for NPR. He writes, draws, and cartoons at Curiously Krulwich, where he synthesizes scientific concepts into colorful, one-of-a-kind blog posts. He has won several Emmy awards for his work on television, and has been called “the most inventive network reporter in television” by TV Guide.

The collection includes contributions from academics and filmmakers from across the Arab region, Europe, and North America, and fills a gap in media studies by examining the entire Arab region, rather than focusing on one country or theme. The Handbook also sheds light on the heterogeneity of Arab filmmaking not only within the Arab region, but also globally, within diasporic communities. It is split into six parts: Part 1 provides an overview of each sub-region in the Arab world, including a chapter on Arab animation films. Parts 2, 3, and 4 address topical themes, encompassing the representation of gender, religion, and identity politics in Arab cinema. Part 5 discusses the theme of diaspora and Part 6 concludes the volume with reflective essays penned by selected diasporic filmmakers. This book is an essential reference for Arab media and cinema scholars, students, and professional filmmakers. With case studies from across the Arab region, it's also a valuable resource for anyone interested in film and media, global cinema, and the

Middle East generally.

**best physics channel on youtube: Fact and Prejudice** Holm Gero Hümmler, Ulrike Schiesser, 2023-06-05 When having coffee with your family, you are offered energized water. On Twitter you discuss with vaccination opponents. The WhatsApp kitagroup discusses zodiac signs, the pharmacy sells you globules, the neighbor proselytizes for her guru, and the news is once again about demonstrations by right-wing extremists. Everywhere you encounter conspiracy myths, superstition, esotericism, pseudoscience and Co. and you want to respond to them - while remaining as factual as possible, clarify your position, provide facts, but also not unnecessarily provoke or overload. In addition, you do not want to hurt your counterpart, but to encourage him to rethink. But how do you do that? If you are asking yourself this question, read *Fact and Prejudice*. Understand why we are driven by emotions and most information bounces off us. Read experiences and tips from interviews with professional (science) communicators. Then follow different people through their own rethinking processes: What convinces an alternative medicine practitioner to leave non-evidence-based medicine behind? What was the deciding factor for a former vaccination opponent to have her children vaccinated after all? What helps members of appropriative organizations to get out? What moves a celebrated medium to break away from esotericism? This book is for anyone who worries about or doesn't know how to communicate with people who have irrational worldviews - whether it's with family, friends, anonymously on the Internet, or at work. The authors give concrete tips on discussions and situations and also help to decide when it is important to engage and when it is better to withdraw.

**best physics channel on youtube: Explore Forces and Motion!** Jennifer Swanson, 2016-06-07 Everything moves! Kids run around the playground, cars drive on the road, and balls fly through the air. What causes all this motion? Physics! Forces and motion rule the way everything moves through space. In *Explore Forces and Motion!* With 25 Great Projects, readers ages 7 through 10 discover that the push and pull of every object on the planet and in space depends on how a force acts upon it. Things float because of a force called buoyancy, we stick to the ground because of a force called gravity, and we make footprints in sand because of a force called pressure. Physics becomes accessible and interactive through activities such as a experimenting with a water cup drop, building a bridge, and spotting magnetic field lines. Simple machines such as levers, pulleys, and wedges are used as vehicles for discovery and comprehension of the foundational concepts of physical science. Using a theme familiar to everyone—motion—this book captures the imagination and encourages young readers to push, pull, twist, turn, and spin their way to learning about forces and motion.

It is especially good for those interested in physics theory, concentrating chiefly on the four great physicists William Gilbert, Rene Descartes, Isaac Newton and Albert Einstein - and also having fine sections on Galileo, Kepler, History of Science, Gravity, Light, String Theory, Standard Model Physics, Probability Science, Philosophy of Science and General Image Theory Science. The second book is a new improved English translation of William Gilbert's banned Latin 1600 'De Magnete' or 'On The Magnet'. This is rather easier to read than its two earlier translations, and significantly

helps to clarify Gilbert's 'attraction' physics which Newton put as one of the two mathematized physics options and which he is believed to have privately favoured. It is basically a novel signal-response or remote-control physics that may still have relevance.
