best way to study accounting: *The Routledge Companion to Accounting Education* Richard M.S. Wilson, 2014-04-29 Many enquiries into the state of accounting education/training, undertaken in several countries over the past 40 years, have warned that it must change if it is to be made more relevant to students, to the accounting profession, and to stakeholders in the wider community. This book's over-riding aim is to provide a comprehensive and authoritative source of reference which defines the domain of accounting education/training, and which provides a critical overview of the state of this domain (including emerging and cutting edge issues) as a foundation for facilitating improved accounting education/training scholarship and research in order to enhance the educational base of accounting practice. The Routledge Companion to Accounting Education highlights the key drivers of change - whether in the field of practice on the one hand (e.g. increased regulation, globalisation, risk, and complexity), or from developments in the academy on the other (e.g. pressures to embed technology within the classroom, or to meet accreditation criteria) on the other. Thirty chapters, written by leading scholars from around the world, are grouped into seven themed sections which focus on different facets of their respective themes - including student, curriculum, pedagogic, and assessment considerations.

best way to study accounting: *Liberalising the Accounting Curriculum in University Education* Alan Sangster, Richard M.S. Wilson, 2014-10-29 This book presents the views of accounting educators, accounting education policy-makers, and accounting practitioners from across the world on the challenging topic of liberalising the accounting curriculum within university education. Accounting is a relatively new subject within universities and has been absorbed into a high level of education without any real attempt to do so within the traditional ethos of a liberal arts education. In this book, the logic of teaching using the liberal arts is described and contrasted with the practical vocational training approach of teaching which has formed the foundation of accountancy courses for many years. A proposal to change this established practice, by integrating the liberal arts into the university accounting curriculum, is followed by a series of short chapters which address the relevance, validity and worthiness of the proposed approach. Comments and counter-arguments are then discussed before further chapters illustrate how the proposed change may be achieved in a

variety of different contexts – ranging from that of the global financial crisis (which began in 2008) to the inclusion of ethics and sustainability within the accounting curriculum. This book will aid those teaching accounting in universities to improve the design of their accounting degree programmes by moving away from an excessive emphasis on technical skills towards a broader consideration of a liberal contextualisation of the accounting curriculum. This book was originally published as a special issue of *Accounting Education: an international journal*.

best way to study accounting: Clinical Neuropsychology of Intervention Barbara P. Uzzell, Yigal Gross, 2012-12-06 Neuropsychology has been concerned with brain-behavior relationships. Clinical neuropsychology has been concerned with application of relationships to clinical problems. As interest in these topics continues, a spin-off from clinical neuropsychology has been the realization of the potential of the lineations of behavioral consequences of cerebral lesions for developing and evaluating restoration and compensation objectives. Methods for these procedures are scattered in books, journal articles, or else unwritten, and only in the minds of clinicians. Questions need to be addressed regarding the kinds of assessment selections required; the types of rehabilitation planning; the influences of the environment, communication, and personality; and the means of effectively evaluating rehabilitation procedures. A useful book is needed by clinicians working in this area. The purpose of this book is to consolidate, in one volume, current workable approaches of a subdiscipline within neuropsychology and related areas which we are calling

Intervention. Problems, dilemmas, solutions, and choices are presented to the reader beginning to work in this fascinating area, and to those of us already enthralled by previous developments and outcomes. Workers with expertise in assessment for intervention and intervention strategies are chapter contributors who unravel issues, provide empirically based theory, illustrative data, and case reports. The volume begins with a chapter that emphasizes an awareness of the potential usefulness of pathophysiology, and the recognition of spontaneous recovery in relationship to intervention. Part II of the book is devoted to identifying and developing assessment techniques relevant for intervention.
