cremation society of virginia charlottesville va: Churchyard and cemetery Julie Rugg, 2015-11-01 This book explores, for the first time, the turbulent social history of churchyards and cemeteries over the last 150 years. Using sites from across rural North Yorkshire, the text examines the workings of the Burial Acts and discloses the ways in which religious politics framed burial management. It presents an alternative history of burial which questions notions of tradition and modernity, and challenges long-standing assumptions about changing attitudes towards mortality in England. This study diverges from the long-standing tendency to regard the churchyard as inherently 'traditional' and the cemetery as essentially 'modern'. Since 1850, both types of site have been subject to the influence of new expectations that burial space would guarantee family burial and the opportunity for formal commemoration. Although the population in central North Yorkshire declined, demand for burial space rose, meaning that many dozens of churchyards were extended, and forty new cemeteries were laid out. This text is accessible to undergraduates and postgraduates, and will be an essential resource for historians, archaeologists and local government officials.

cremation society of virginia charlottesville va: Death to Dust Kenneth V. Iserson, 2001 In our culture, we rarely speak about death -- partly because it is seen as a sort of pornography, shrouded in indecency and immersed in taboos; and partly because we know so little about it. Yet nearly everyone at some point has questions about what happens after death. At long last, here is a book to answer many of those questions: What physical changes occur to a dead body?

cremation society of virginia charlottesville va: Death and Architecture James Stevens Curl, 2002 Richly illustrated with over 350 photographs, plans and engravings, this fascinating and unusual book examines the importance of funerary architecture in the development of architectural style. It reveals many hidden wonders and beauties throughout the world.

cremation society of virginia charlottesville va: Death, Ritual, and Belief Douglas James Davies, 1997 Describing a great variety of funeral ritual from major world religions and from local traditions, this book shows how cultures not only cope with corpses but also create an added value for living through the encouragement of afterlife beliefs. The explosion of interest in death in recent years reflects the key theme of this book - the rhetoric of death - the way cultures use the most potent weapon of words to bring new power to life. This new edition is one third longer than the original with new material on the death of Jesus, the most theorized death ever which offers a useful case study for students. There is also empirical material from contemporary/recent events such as the death of Diana and an expanded section on theories of grief which will make the book more

attractive to death counsellors.

cremation society of virginia charlottesville va: **From the Pleistocene to the Holocene** C. Britt Bousman, Bradley J. Vierra, 2012-10-22 The end of the Pleistocene era brought dramatic environmental changes to small bands of humans living in North America: changes that affected subsistence, mobility, demography, technology, and social relations. The transition they made from Paleoindian (Pleistocene) to Archaic (Early Holocene) societies represents the first major cultural shift that took place solely in the Americas. This event—which manifested in ways and at times much more varied than often supposed—set the stage for the unique developments of behavioral complexity that distinguish later Native American prehistoric societies. Using localized studies and broad regional syntheses, the contributors to this volume demonstrate the diversity of adaptations to the dynamic and changing environmental and cultural landscapes that occurred between the Pleistocene and early portion of the Holocene. The authors' research areas range from Northern Mexico to Alaska and across the continent to the American Northeast, synthesizing the copious available evidence from well-known and recent excavations. With its methodologically and geographically diverse approach, *From the Pleistocene to the Holocene: Human Organization and Cultural Transformations in Prehistoric North America* provides an overview of the present state of knowledge regarding this crucial transformative period in Native North America. It offers a large-scale synthesis of human adaptation, reflects the range of ideas and concepts in current archaeological theoretical approaches, and acts as a springboard for future explanations and models of prehistoric change.

cremation society of virginia charlottesville va: **Encyclopedia of Death and Dying** Glennys Howarth, Oliver Leaman, 2003-12-16 In recent years there has been a massive upsurge in academic, professional and lay interest in mortality. This is reflected in academic and professional literature, in the popular media and in the proliferation of professional roles and training courses associated with aspects of death and dying. Until now the majority of reference material on death and dying has been designed for particular disciplinary audiences and has addressed only specific academic or professional concerns. There has been an urgent need for an authoritative but accessible reference work reflecting the multidisciplinary nature of the field. This Encyclopedia answers that need. The Encyclopedia of Death and Dying consolidates and contextualizes the disparate research that has been carried out to date. The phenomena of death and dying and its related concepts are explored and explained in depth, from the approaches of varied disciplines and related professions in the arts, social sciences, humanities, medicine and the sciences. In addition to scholars and students in the field—from anthropologists and sociologists to art and social historians—the Encyclopedia will be of interest to other professionals and practitioners whose work brings them into contact with dying, dead and bereaved people. It will be welcomed as the definitive death and dying reference source, and an essential tool for teaching, research and independent study.

Leveillee, 2002-04-30 Over 3,000 years ago, in what would be northern North America, there was a cultural florescence. Native Americans were exchanging materials and ideas over long distances, and their shamans were overseeing treatment of the dead and conducting ceremonies to insure entry into the spirit world. The author details how archaeologists discovered their story. The discovery, excavation, and interpretation of data on one of the most significant ancient Native American archaeological sites in the Northeast is chronicled. Research team leader Alan Leveillee outlines the regional, environmental, and cultural contexts, details the archaeological methodology, and synthesizes the results of analyses of lithics, metals, flora, fauna, and soils, and presents the on-site observations and interpretations of the Native American representative of the team. Focusing on the discovery and subsequent archaeological approach to the first professionally excavated secondary burial complex in the Commonwealth of Massachusetts, Leveillee demonstrates that anthropological models enable consideration of how artifacts and features reveal 3,500-year-old ideologies, ceremonies, and social systems—the archaeology of ideas.
