credence resource management at t: Engineering Risk in Natural Resources Management L. Duckstein, E. Parent, 2013-11-11 The purpose of this paper is to present a methodology for estimating space-time stochastic properties of local climatic factors reflecting global climate change. Specifically, daily precipitation amount and daily mean temperature are considered and illustrated with application to the state of Nebraska, U. S. A. Furthermore, a drought index with and without global climate change is examined. The magnitude and consequences of regional response to anticipated climatic changes are uncertain (Houghton et al. , 1990). Typical questions to be answered are: can time series of hydrological events or 10cal climatic variables such as daily temperature be conditioned in scenarios of future climate change and if so, how can this be utilized

? Can extreme historical drought events be reproduced by a stochastic hydroclimatological model ? Can such a model be used with General Circulation Model (GCM) outputs to evaluate the regional/local effects of climate change scenarios? The approach presented in this paper is an extension of the usual analysis of regional hydrometeorological impacts of climate change: we propose to examine time series of GCM produced daily atmospheric circulation patterns (CP), thought to be relatively accurate GCM output to estimate local climatic factors. The paper is organized as follows. First, daily CPs are classified and analyzed statistically, first for historical and then for GCM produced data. Next, the height of the 500 hPa pressure field is introduced as an additional physically relevant variable influencing local climatic factors within each CP type.

credence resource management at t: Religion, Occult and Youth Conflict in the Niger Delta of Nigeria E. Anugwom, 2017-03-02 The book examines the nexus between youth conflict and the occult drawing its insights from the oil-rich Niger Delta of Nigeria. It sees the occult represented by the Egbesu deity in this conflict as a form of religious belief imbued in this case with the powers of good. Thus, the religious occult is regenerated and re-energised as an idiom of justice and fairness within the Nigerian state by militant youth fighting the forces of the Nigerian state. Ingeniously, the young men simply dug into the cultural repertoire of the people for a hitherto popular expression of justice and perceived source of potency which they felt would not only provide spiritual protection but also pander to the popular imagination of justice. Even against the background prevalent Christianity, the Egbesu does not generate tension in beliefs but responds to the critical exigency of the immediate socio-political milieu of the people.
