creighton medical school research opportunities: Handbook of Basic and Clinical Ocular Pharmacology and Therapeutics Sunny Ohia, Najam Sharif, 2022-07-26 Handbook of Basic and Clinical Ocular Pharmacology and Therapeutics provides a review of the basic anatomy, physiology, biochemistry and pathology of the eye with a focus drug therapy, drug delivery and use of therapeutic medical miniature devices. An understanding of the pharmacological actions of drugs acting on the eye requires the student and health care practitioner to learn additional principles in basic and clinical sciences that are unique to this organ. As a sensory organ, the eye is relatively inaccessible to the systemic circulation due to the blood-vitreous, blood-aqueous and blood-retinal barriers. Consequently, the administration of drugs for therapeutic effects in the eye necessitates an understanding of physico-chemical properties of the molecules and pharmacokinetic principles involved in the access to its site of action via topical, intracameral and intravitreal administration. This book includes information on the general principles of pharmacokinetics and pharmacodynamics of drugs as it pertains to the eye and in combating ocular disorders and diseases. Using a disease-themed approach, the book discusses basic and clinical pharmacological principles involved in the therapy of these diseases including the ocular side effect of systemically-administered drugs, drugs used in ophthalmic surgery and miscellaneous agents, the therapeutic utility of biologics, drug conjugates, combination products, gene and cellular therapy are also covered. Handbook of Basic and Clinical Ocular Pharmacology and Therapeutics is useful as a primary and secondary source of reference for up-to-date information about the pharmacological mechanisms of action, pharmacokinetics, side effects, drug-drug interactions and therapeutic indications of drugs for pharmacologists, pharmaceutical scientists, students in the health care disciplines (nursing, pharmacy, optometry, medical), and practitioners in optometry and ophthalmology. - Explains the mechanisms of action, side-effects and therapeutic uses of drugs, biologics, miniature devices, gene and cellular therapies for the eye - Provides a comprehensive review of the anatomy, physiology, biochemistry, pharmacology, microbiology, genetics and pathology of parts of the eye involved in drug therapy to combat eye disorders and diseases - Explores the pharmacological and clinical basis of drugs, drug conjugates, combination products used in the treatment of anterior and posterior segment diseases

creighton medical school research opportunities: American Men and Women in Medicine, Applied Sciences and Engineering with Roots in Czechoslovakia Miloslav Rechcigl Jr., 2021-02-17 No comprehensive study has been undertaken about the American learned men and women with Czechoslovak roots. The aim of this work is to correct this glaring deficiency, with the focus on men and women in medicine, applied sciences and engineering. It covers immigration from the period of mass migration and beyond, irrespective whether they were born in their European ancestral homes or whether they have descended from them. This compendium clearly demonstrates the Czech and Slovak immigrants, including Bohemian Jews, have brought to the New World, in these areas, their talents, their ingenuity, the technical skills, their scientific knowhow, as well as their humanistic and spiritual upbringing, reflecting upon the richness of their culture and traditions, developed throughout centuries in their ancestral home. This accounts for their remarkable success and achievements of these settlers in the New World, transcending through their descendants, as this publication demonstrates. The monograph has been organized into sections by subject areas, i.e., Medicine, Allied Health Sciences and Social Services, Agricultural and Food Science, Earth and Environmental Sciences and Engineering. Each individual entry is usually accompanied with literature, and additional biographical sources for readers who wish to pursue a deeper study. The selection of individuals has been strictly based on geographical vantage, without regards to their native language or ethnical background. Some of the entries may surprise you, because their Czech or Slovak ancestry has not been generally known. What is conspicuous is a large percentage of listed individuals being Jewish, which is a reflection of high-level of education and intellect of Bohemian Jews. A prodigious number of accomplished women in this study is also astounding, considering that, in the 19th century, they rarely had careers and most professions refused entry to them.

creighton medical school research opportunities: Calming America Dennis S. O'Leary MD, 2022-09-16 Pot Luck Spokesman? The information void in the hours following the shooting of US President Ronald Reagan late Monday afternoon, March 30, 1981, spawned many false rumors and misinformation, which White House political adviser Lyn Nofziger understood threatened the credibility of the White House. He therefore took the podium before the 200 plus assembled press in Ross Hall to tell them that he would be bringing with him a credible physician to brief them once the president was out of surgery. However, he didn't have many options to draw from for that credible physician. At the hospital, the surgeons tending the three shooting victims had first-hand information about the afternoon's events, but each surgeon knew only about his own injured patient. White House physician Dan Ruge meanwhile had been at the president's side throughout the afternoon and was a possible candidate, but his White House association made his credibility suspect according to White House aides. The job became the drafting of the most logical person to be spokesman. That would have been the seasoned physician CEO of the George Washington University Medical Center Ron Kaufman, but he was out of town. Next up was Dennis O'Leary, the physician dean for clinical affairs, as the preferred spokesman. To the White House, O'Leary was a total unknown, but a review of his credentials would hardly have been reassuring. He had originally been recruited to George Washington University as a blood specialist. Reticent by nature, he had

minimal public-relations and public-speaking experience, save two years as a member of his hometown high school debate team. He had no surgical or trauma training or experience. But beggars can't be choosers, as the saying goes. Kindly stated, O'Leary was probably the least bad choice to serve as White House/hospital spokesman to inform the world of the status of the wounded President Reagan, special agent Tim McCarthy, and press secretary Jim Brady. Yet, with a little bit of luck, it might all work out. And it did.
