**crime analysis certificate online: Scams, Cons, Frauds, and Deceptions** Sean Byrne, James

Byrne, 2024-06-28 This unique volume presents cutting-edge research on the nature and extent of a wide range of scams, cons, frauds, and deceptive activities, including sextortion, the use of ransomware, phishing, identity theft, Ponzi schemes, online shopping fraud, gift card scams, and health care fraud targeting elderly victims. The contributions to this book raise and attempt to answer several intriguing questions: Why have governments in each global region failed to respond more aggressively to these crimes? What can/should the private sector and social media giants be doing? Can the current responses of both governments and the private sector be linked to the public's ambivalence about how to respond to these forms of offending and victimization? Does a large segment of the public admire individuals who get involved in these activities, in large part due to the positive portrayal of scammers, fraudsters, and con artists in both literature and cinema? Or does the public's view of the harm caused by these scams and cons vary, based on our view of who is victimized (e.g., individuals or corporations) and/or why they were chosen? Will governments - as they have done in the past - attempt to influence the public's views by restricting access to books and movies that focus on the latest scams, cons, and frauds taking place on-line and in-person via book banning and other forms of censoring? And finally, should this discussion of the influence of books and cinema on the public's views of scams, frauds, cons, and deception be broadened to include the government's ongoing attempts to censure a wide range of books and films that may influence the public's view of morality—and more recently, the public's view of our government—due to their content? Timely and thought-provoking, this book will be a key resource for researchers, scholars, and practitioners in criminology and criminal justice, sociology, law, psychology, and social work, while also appealing to interdisciplinary researchers seeking insight into the relationship between positive portrayals of scammers, fraudsters, and con artists in literature and cinema, and the public's perception of individuals who get involved in these activities. It was originally published as a special issue of *Victims & Offenders*.

**crime analysis certificate online:** Advancing the Science of Environmental Justice in the International Wildlife Trade Jamie K. Reaser, Nicholas King, Gunārs Hauff Platais, Ines Arroyo-Quiroz , Meredith L. Gore, Isla Kirkey, 2025-06-03 \*The Smithsonian Institution has offered to cover the publication costs of most, if not all, of the papers accepted for this Research Topic.\* There is a need to conceptualize an environmental justice framework that informs regulation of the international wildlife trade to minimize species endangerment and infectious disease risks while also affording environmental justice to communities, nations, species, and ecological systems entwined in the commerce pathway. This Research Topic is dedicated to advancing the science of environmental justice in the international wildlife trade from both problems and solutions perspectives. We welcome manuscripts relevant to legal and/or illegal aspects of the international wildlife trade. Submissions must be of a scholarly nature and framed from a social sciences perspective, although inter-disciplinary work is encouraged. The international wildlife trade has been recognized as one of the greatest threats to biodiversity, as well as a facilitator of zoonotic disease transmission with pandemic potential. This has led to increased calls for regulation of this megabillion/year industry—ranging from comprehensive bans to risk-based strategies that are species, product, and/or geography specific. Every aspect of wildlife commerce and every proposed risk mitigation measure has implications for environmental justice, yet environmental justice has not been mainstreamed in the scientific inquiry, policy, nor planning processes relative to the international wildlife trade. Because wildlife trade has diverse drivers and purposes, as well as different levels of legality, social legitimacy, and enforcement, there is an urgent need to understand the environmental justice issues tied to consumer demand vs. supply provision along the trade chain, including how this is influenced by economic, cultural, and geographic biases. An understanding of environmental justice patterns and trends is necessary for the design and support of effective regulatory frameworks that manage risks in actuality, rather than merely in concept. Determining where and how to permit and support legal and sustainable wildlife trade, versus where it should be more tightly regulated or even cease, requires at least as much understanding of the human animal as it does the wildlife species. A greater understanding of the political economy of the illegal aspects of the international wildlife trade from an environmental justice perspective can also open new vistas of green criminological inquiry. Ecological citizenship and environmental justice are central themes in green criminology highly relevant to the wildlife trade. They recognize justice as central to the right to be protected from harm, whether that is one-on-one harm, institutionalized harm, or harm arising from human actions that affect climates and environments on a global scale. The recognition of such rights in trade regulation is scant and more likely overshadowed by a desire to protect the economic value of a “good” rather than the inherent value of the wild animal being consumed. We will prioritize papers that use social science approaches/tools to empirically investigate aspects of environmental justice in the international wildlife trade. Manuscripts should be framed so as to facilitate development of an environmental justice framework that informs regulation of the international wildlife trade to minimize species endangerment and infectious disease risks while also affording environmental justice to communities, nations, and ecological systems entwined in the commerce pathway. We welcome manuscripts relevant to legal and/or illegal aspects of the international wildlife trade. Submissions must be of a scholarly nature - we will not accept advocacy documents. The following manuscript types will also be considered if the contributions are sufficiently innovative/transformative: 1) Case studies of environmental justice problems/resolutions in the international wildlife trade context. 2) Models for advancing the science of environmental justice in the international wildlife trade context. 3) Analyses of international wildlife trade law/policy frameworks with a view toward integrating environmental justice issues (as rooted in scholarly science). All papers should emphasize conservation goals/outcomes. Direct
