Divided into two parts, the book begins with the basics of analysis, providing a brief history, systematic methods of identification, fingerprint pattern types and their associated terminologies and current classifications. The second part of the book discusses the identification and presentation of evidence in the courtroom, demonstrating both the traditional, manual method of lifting prints and the newer techniques for automated and live scans. Coverage provides instruction on searching and developing latent prints, storage, and comparison of prints. New to this edition are updated techniques on collecting and preserving fingerprint evidence—including packaging and maintaining chain of custody. More detailed documentation processes, and additional chemical and lifting techniques, are described including use of light sources, latent backing cards and lifting material, casting material, ten print cards, and the enhancement of prints in blood. A discussion of laboratory equipment and comparison tools, the addition of photography techniques, and recent courtroom challenges to fingerprint evidence is also presented. Fingerprints, Second Edition will provide a hands-on, fresh look at the most commonly utilized evidence found at crime scenes: fingerprints. The book will provide law enforcement, crime scene personnel and students just such an opportunity to easily understand and grasp the concepts, and relevant issues, associated with friction skin and fingerprint evidence.

crime scene technology degree: Daddy's Deploying Marlene Norgard, 2020-12-30 This book is a poem I wrote as I watched my husband be absent through his first child's first year of life. He struggled missing his first words, first foods, first steps, and first birthday. With only seeing his little world through photographs, he emotionally grappled to both connect with him and settle in to the father figure role. I hoped to capture all of the sentiments that are connected with parents and children when facing a deployment. There is nothing that can give them that time back with their children, and nothing that can make up for that initial lack of connection between parent and baby. I try and highlight the similarities of both of their current geographical worlds and shrink them by

showing that they are both looking at the same moon, stars, and sun. It helped my son connect with his daddy knowing when he looked up in the sky at the same time his daddy was, they could share a moment together, and both my son and I could feel less alone.

crime scene technology degree: Visual Communication David Machin, 2014-04-30 The primary goal of the volume on Visual Communication is to provide a collection of high quality, accessible papers that offer an overview of the different academic approaches to Visual Communication, the different theoretical perspectives on which they are based, the methods of analysis used and the different media and genre that have come under analysis. There is no such existing volume that draws together this range of closely related material generally found in much less related areas of research, including semiotics, art history, design, and new media theory. The volume has a total of 34 individual chapters that are organized into two sections: theories and methods, and areas of visual analysis. The chapters are all written by quality theorists and researchers, with a view that the research should be accessible to non-specialists in their own field while at the same time maintaining a high quality of work. The volume contains an introduction, which plots and locates the different approaches contained in it within broader developments and history of approaches to visual communication across different disciplines as each has attempted to define its terrain sometimes through unique concepts and methods sometimes through those borrowed and modified from others.
