critical care medicine conference: *Bouncebacks! Critical Care* Michael B. Weinstock, Kevin M. Klauer, 2021-07-13 This edition of *Bouncebacks! Emergency Medicine* books examines the bounceback visit, putting the reader in the footsteps of the clinician as the patient deteriorates. The story pauses at important decision points as possible management strategies are reviewed in a literature-based fashion, followed by a revelation of the path chosen by the actual provider. As the patient's course progresses, we reach additional decision points and address further clinical questions. In addition to our chapter authors, many with expertise in critical care emergency medicine, we have an all-star lineup of expert-whisperers: first an EM/critical care section editor (below) and second, EMCRI.org's double-boarded critical care guru, Scott Weingart. Their comments are inserted in grey boxes and are intended to give tips and tricks borne of experience and to provide context to the literature, as if they are standing over our shoulder and advising during a resuscitation. Additionally, there are three chapters where we address the medical-legal aspects of care. Enter Greg Henry MD, past president of The American College of Emergency Physicians (ACEP) and one of the most experienced physician medical-legal experts in the country. He opines on the approach that both the defense and plaintiff would likely pursue and, by extension, how we can make patients safer through our evaluation and documentation before there is an adverse outcome. Whereas, these chapters contain the actual documentation from the ED chart, a very few chapters have slight modifications to the final aspects of the return visit at decision point 3, to allow for exploration of different critical care scenarios. There is still plenty of commentary on the documentation, missed red-flags, and what could have been done to improve care at the initial visit. Our goal is to make each chapter challenging, dynamic, and realistic... to move us from "standard of care" to "excellence in care." Book Review: It's back, it's *Bouncebacks!* One of the mostly widely read and highly regarded education series in all of Emergency Medicine. Clinicians fear the medical malpractice landscape, but Mike Weinstock and the team give you all the tools you need to protect yourselves. Documentation people, documentation. Now with a critical care version. Read this book, sleep better at night, as simple as that! Love, love this series! -- Mel Herbert, MD, MBBS, BMedSci, FACEP, FAAEM Professor of Emergency Medicine at the Keck School of Medicine LAC + USC Medical Center, Owner and Editor of EM: RAP

critical care medicine conference: *Perioperative and Critical Care Medicine* A. Gullo, G. Berlot, 2012-12-06 by S. GUASCHINO Dean, Trieste University School of Medicine The society we live in is in continual development and has a number of priorities for improving the standards of communication. The scientific sector in particular thrives on the exchange of information, which is the foundation of progress itself. The channels through which this interaction takes place are many and are aimed at optimising teaching methodology. Researchers and scholars, research centres and the places of higher learning themselves are increasingly aware of the growing importance of

universities, which, thanks to their intrinsic ability to renew themselves, have taken on a vital central and propulsive role. Communication develops as a result of free exchange, debate of the materials available and the study of the various references and analysis sources. With the advent of information systems, the teaching methodology has assumed a decisive role, both in terms of the quantity of data available and the quality of the information. Distance learning is a new and important opportunity for the immediate future. The Anaesthesia and Critical Care School of Trieste has promoted this interesting and highly relevant initiative by drawing together teaching material from the academic year 2003/2004. Numerous international lecturers have contributed to this valuable achievement. In addition, a large part of the material is the fruit of a real consortium between the various Italian Schools of Anaesthesia.

critical care medicine conference: Evaluating Critical Care William J. Sibbald, Julian F. Bion, 2012-12-06 Measuring the quality of a complex service like critical care that combines the highest technology with the most intimate caring is a challenge. Recently, consumers, clinicians, and payers have requested more formal assessments and comparisons of the quality and costs of medical care [2]. Donabedian [1] proposed a framework for thinking about the quality of medical care that separates quality into three components: structure, process, and outcome. An instructive analogy for understanding this framework is to imagine a food critic evaluating the quality of a restaurant. The critic might comment on the decoration and lighting of the restaurant, how close the tables are to each other, the extent of the wine list and where the chef trained. These are all evaluations of the restaurant structure. In addition, the critic might comment on whether the service was courteous and timely - measures of process. Finally, the critic might comment on outcomes like customer satisfaction or food poisoning. Similarly, to a health care critic, structure is the physical and human resources used to deliver medical care. Processes are the actual treatments offered to patients. Finally, outcomes are what happens to patients, for example, mortality, quality of life, and satisfaction with care (Table 1). There is a debate about which of these measurements is the most important measure of quality.
