crime intelligence analysis certification: Improving Intelligence Analysis Stephen Marrin, 2012-08-21 This book on intelligence analysis written by intelligence expert Dr. Stephen Marrin

argues that scholarship can play a valuable role in improving intelligence analysis. Improving intelligence analysis requires bridging the gap between scholarship and practice. Compared to the more established academic disciplines of political science and international relations, intelligence studies scholarship is generally quite relevant to practice. Yet a substantial gap exists nonetheless. Even though there are many intelligence analysts, very few of them are aware of the various writings on intelligence analysis which could help them improve their own processes and products. If the gap between scholarship and practice were to be bridged, practitioners would be able to access and exploit the literature in order to acquire new ways to think about, frame, conceptualize, and improve the analytic process and the resulting product. This volume contributes to the broader discussion regarding mechanisms and methods for improving intelligence analysis processes and products. It synthesizes these articles into a coherent whole, linking them together through common themes, and emphasizes the broader vision of intelligence analysis in the introduction and conclusion chapters. The book will be of great interest to students of intelligence studies, strategic studies, US national security, US foreign policy, security studies and political science in general, as well as professional intelligence analysts and managers.

crime intelligence analysis certification: *Crime and Technology* Ernesto U. Savona, 2013-06-05 Guido Rossi As Chairman of ISPAC, I want to thank all the contributors to this book that originates from the International Conference on Crime and Technology. This could be the end of my presentation if I did not feel uneasy not considering one of the problems I believe to be pivotal in the relationship between crime and technology. I shall also consider that the same relationship exists between terror and globalization, while globalization is stemming from technology and terror from crime. Transnational terrorism is today made possible by the vast array of communication tools. But the paradox is that if globalization facilitates terrorist violence, the fight against this war without borders is potentially disastrous for both economic development and globalization. Antiterrorist measures restrict mobility and financial flows, while new terrorist attacks could lead the way for an antiglobalist reaction. But the global society has yet to agree on a common definition of terrorism or on a common policy against it. The ordinary traditional criminal law is still depending on the sovereignty of national states, while international criminal justice is only a spotty and contested last resort. The fragmented and weak international institutions and underdeveloped civil societies have no power to enforce criminal justice against terrorism. At the same time, the states that are its targets have no interest in applying the laws of war (the Geneva Conventions) to their fight against terrorists.

crime intelligence analysis certification: *Professional Issues in Forensic Science* Max M. Houck, 2015-04-15 Professional Issues in Forensic Science will introduce students to various topics they will encounter within the field of Forensic Science. Legal implications within the field will focus on expert witness testimony and procedural rules defined by both legislative statute and court decisions. These decisions affect the collection, analysis, and court admissibility of scientific evidence, such as the Frye and Daubert standards and the Federal Rules of Evidence. Existing and pending Forensic Science legislation will be covered, including laws governing state and national DNA databases. Ethical concerns stemming from the day-to-day balancing of competing priorities encountered by the forensic student will be discussed. Such competing priorities may cause conflicts between good scientific practice and the need to expedite work, meet legal requirements, and satisfy client's wishes. The role of individual morality in Forensic Science and competing ethical standards between state and defense experts will be addressed. Examinations of ethical guidelines issued by

various professional forensic organizations will be conducted. Students will be presented with examples of ethical dilemmas for comment and resolution. The management of crime laboratories will provide discussion on quality assurance/quality control practices and the standards required by the accreditation of laboratories and those proposed by Scientific Working Groups in Forensic Science. The national Academy of Sciences report on Strengthening Forensic Science will be examined to determine the impact of the field. Professional Issues in Forensic Science is a core topic taught in forensic science programs. This volume will be an essential advanced text for academics and an excellent reference for the newly practicing forensic scientist. crime intelligence analysis certification: INTELLIGENCE AND PRIVATE INVESTIGATION Hank Prunckun, 2013-07-01 While many books have been written about private investigation, this text is different in that it does not deal with the subject from traditional perspectives. It examines how private investigation has grown, particularly since 9-11, into an exacting and sophisticated occupation. The book looks at the key issues in what it describes as private intelligence; that is, intelligence activities practiced by operatives other than law enforcement, national security, or the military. Eleven world experts contribute chapters addressing key practice issues concerning the skills, abilities, and knowledge necessary in the new realm of private intelligence. The initial three chapters provide a report on present-day private intelligence and offer an overview of the specifics of intelligence issues that follow. Eleven subsequent chapters take the reader progressively through various intelligence-related subjects. Major topics presented include: skills for intelligence-led private investigators, open source intelligence, target profiling, fraud intelligence, political intelligence, anti-terrorist and anti-gang intelligence, illicit organizations and financial intelligence, counterintelligence, clandestine communication methods, preparing a prosecution brief, legal issues for intelligence-led private investigators, and ethical issues for intelligence-led private investigators. Additionally, the text contains several features that will appeal to both students and instructors. These include a set of key terms and phrases, a number of study questions, and learning activities in each chapter. Written in a clear and concise style, the text provides a foundation of practical and useful information. It will be a most important and unique resource for undergraduate students in private investigation courses as well as intelligence practitioners and general readers interested in self-development study.
