Understanding Cross Border Taxation

Cross border taxation refers to the taxation principles and regulations that apply when business activities, income, or assets cross national boundaries. This domain involves the interpretation and application of tax laws from multiple countries, often creating complex scenarios for taxpayers. Key issues include determining tax residency, source of income, and the applicability of double taxation treaties.

Tax Residency and Permanent Establishment

Determining tax residency is fundamental in cross border tax and accounting as it dictates the jurisdiction that has the right to tax an individual or entity. Businesses must also assess whether they have a permanent establishment (PE) in another country, which impacts tax obligations. A PE generally refers to a fixed place of business or a dependent agent through which business activities are conducted.

Double Taxation Treaties

Double taxation treaties (DTTs) are agreements between countries designed to prevent the same income from being taxed twice. These treaties allocate taxing rights and provide mechanisms for tax relief, such as credits or exemptions. Understanding and applying DTT provisions is vital to minimize tax liabilities and ensure compliance in cross border transactions.

Transfer Pricing Regulations

Transfer pricing governs the pricing of transactions between related entities operating in different countries. Tax authorities scrutinize these transactions to ensure profits are not artificially shifted to low-tax jurisdictions. Compliance requires documentation and adherence to the arm's length principle, which mandates that related-party transactions be conducted as if between independent parties.

International Accounting Standards and Practices

Accounting across borders necessitates compliance with various international standards to ensure consistency, transparency, and comparability of financial statements. The adoption of International Financial Reporting Standards (IFRS) or Generally Accepted Accounting Principles (GAAP) varies by jurisdiction, impacting cross border accounting practices.

International Financial Reporting Standards (IFRS)

IFRS is a globally recognized set of accounting standards designed to bring uniformity to financial reporting. Many countries require or permit IFRS for public companies, facilitating investment and financial analysis across borders. IFRS principles address revenue recognition, asset valuation, and consolidated financial statements, which are crucial in multinational accounting.

U.S. GAAP and Other National Standards

While IFRS is widely adopted, some countries, notably the United States, follow their own standards such as U.S. GAAP. Differences between IFRS and GAAP can complicate the preparation of consolidated financial statements for multinational corporations. Professionals must be adept at reconciling these standards and understanding their implications on financial reporting.

Currency Translation and Consolidation

Cross border accounting involves converting foreign currency financial statements into the reporting currency of the parent company. Exchange rate fluctuations can significantly impact reported earnings and balance sheet values. Various methods such as the temporal method or current rate method are used for currency translation and consolidation.

Compliance Challenges in Cross Border Tax and Accounting

Compliance with diverse tax laws and accounting regulations presents significant challenges for multinational enterprises. These challenges include managing differing reporting deadlines, understanding varying tax bases, and adhering to anti-avoidance rules. Non-compliance can result in penalties, reputational damage, and increased scrutiny.

Varying Regulatory Environments

Each country has distinct tax codes, reporting requirements, and accounting standards that require detailed knowledge to ensure compliance. Multinational companies must maintain updated information on tax law changes and accounting pronouncements in all jurisdictions where they operate.

Tax Reporting and Documentation Requirements

Cross border tax and accounting compliance demands extensive documentation, including transfer pricing reports, tax return filings, and financial disclosures. Tax authorities often require audits and may impose substantial penalties for inadequate reporting or failure to meet deadlines.

Anti-Avoidance and Substance Rules

Many countries have introduced anti-avoidance legislation to curb aggressive tax planning and profit shifting. Substance requirements ensure that entities have real economic activities in the jurisdiction to justify tax benefits. Compliance with these rules requires careful structuring of international operations.

Tax Planning and Optimization Strategies

Effective cross border tax and accounting strategies can optimize tax liabilities while maintaining compliance. Tax planning involves structuring

transactions and business operations to take advantage of favorable tax regimes, incentives, and treaty benefits.

Utilizing Tax Treaties and Incentives

Strategic use of double taxation treaties and local tax incentives can reduce withholding taxes, corporate tax rates, and other tax burdens. Companies must analyze treaty provisions on dividends, interest, and royalties to maximize benefits.

Transfer Pricing Planning

Implementing robust transfer pricing policies aligned with international guidelines helps mitigate risks of adjustments and penalties. Advance pricing agreements (APAs) with tax authorities can provide certainty and reduce disputes.

Entity Structure and Location Decisions

Choosing the appropriate legal entity and jurisdiction for operations affects tax exposure and compliance complexity. Factors such as tax rates, regulatory environment, and availability of tax treaties influence these decisions.

Technology and Tools for Cross Border Financial Management

Advancements in technology have enhanced the efficiency and accuracy of managing cross border tax and accounting matters. Software solutions and digital platforms support compliance, reporting, and data analysis on a global scale.

Automated Tax Compliance Systems

Automated tools facilitate tax return preparation, filing, and payment processes across multiple jurisdictions. These systems help reduce errors, ensure timely submissions, and maintain audit trails.

Accounting Software with Multi-Currency Support

Modern accounting software supports multi-currency transactions and currency translation, easing the consolidation of international financial data. Integration with tax compliance modules streamlines operations for

multinational entities.

Data Analytics and Risk Management

Data analytics platforms enable companies to monitor tax positions, identify risks, and analyze financial trends. These tools support strategic decision-making and compliance monitoring in complex cross border environments.

Frequently Asked Questions

What are the key challenges businesses face in cross border tax compliance?

Key challenges in cross border tax compliance include navigating differing tax laws and regulations, managing transfer pricing rules, avoiding double taxation, ensuring proper documentation, and keeping up with frequent changes in international tax policies.

How does the OECD's BEPS initiative impact cross border tax planning?

The OECD's BEPS (Base Erosion and Profit Shifting) initiative aims to prevent tax avoidance strategies that exploit gaps in tax rules. It imposes stricter regulations on profit shifting, transfer pricing, and transparency, requiring businesses to adjust their cross border tax planning to comply with new reporting standards and substance requirements.

What is double taxation and how can it be mitigated in cross border transactions?

Double taxation occurs when the same income is taxed by two different countries. It can be mitigated through Double Taxation Avoidance Agreements (DTAAs), foreign tax credits, tax treaties, and proper structuring of transactions to ensure income is taxed only once or that taxes paid in one jurisdiction are credited in another.

Why is transfer pricing important in cross border accounting and tax?

Transfer pricing is crucial because it determines the prices at which related entities in different countries transact with each other. Proper transfer pricing ensures compliance with tax regulations, prevents profit shifting to low-tax jurisdictions, and avoids penalties from tax authorities by demonstrating that transactions are conducted at arm's length.

What role does digitalization play in cross border tax and accounting processes?

Digitalization streamlines cross border tax and accounting processes by enabling real-time data sharing, improving accuracy, enhancing compliance through automated reporting, and facilitating better risk management. Technologies like blockchain and AI help reduce errors, increase transparency, and support adherence to international tax regulations.

cross border tax and accounting: *Cross-Border Taxation of Permanent Establishments*

Andreas Waltrich, 2016-04-20 The permanent establishment (PE) is a legal form of cross-border direct investment whereby a business presence is maintained as an integral part of the foreign investor. Due to the growing intensity and complexity of international business relations, the PE definition and the allocation of profits between head units and PEs have become highly contentious, especially from the perspectives of the major emerging economies of the BRIC countries (Brazil, Russia, India, and China). Unsurprisingly, the potential for tax avoidance and the scrutiny of tax authorities have increased enormously. Against this background, this work illustrates and compares the OECD Model Tax Convention with country-specific source taxation rules, focusing on possible tax system changes and offering reform proposals. Emphasizing the taxable implications of the various rules upon country-specific PE concepts, the author's treatment covers such issues and topics as the following: - the PE definition of the OECD MC and from the perspective of selected countries; - allocation of business profits under the Authorised OECD Approach (AOA); - avoidance of PE status; - implementation of a service PE proposal; - construction site PEs established by subcontractors; - existence of an agency PE; and - the OECD project on Base Erosion and Profit Shifting (BEPS). The author uses simulated cross-border national and treaty cases to highlight qualification conflicts, thus reinforcing his detailed discussion of source taxation rules of business profits and relevant case law in Germany, the United States, and the BRIC states. There is also a checklist detailing how companies can avoid unintentionally setting up a PE. The author's deeply informed proposals provide much-needed guiding tax criteria and open the way to greater feasibility and transparency in PE taxation. Because the definition of PEs has enlarged and the treatment of profit allocation has become more complex, the clarification of the PE concept presented in this book is of inestimable importance for lawyers, officials, policymakers, and academics concerned with international business taxation in any jurisdiction.

cross border tax and accounting: *Taxation of Income from Domestic and Cross-border*

Collective Investment Andreas Oestreich, Markus Hammer, 2013-07-30 The Fund Reporting Cloud® has made tax reporting less complex, but comparing the effective tax treatment of investment funds and their investors in an international environment is still an ambitious task. Against this background, this study examines the tax consequences at fund, asset, and investor level. In geographical terms our comparison covers eleven European countries, the USA, and Japan. Our analysis of the relevant tax provisions, which is of a primarily qualitative nature, is complemented by a quantitative comparison of the tax burden for a model investor investing assets nationally in the form of a collective investment. It will be of interest both for investors seeking tax advantages and for governments to check whether there is a need for tax reforms. It also ties in perfectly with the current evaluations at OECD level in the context of TRACE.

cross border tax and accounting: *Cross-Border Mergers and Acquisitions*

Moshfique Uddin, Agyenim Boateng, 2014-05-30 Cross-border mergers and acquisitions (CBM&As) activity has become an important vehicle for firms' internationalization and corporate restructuring over the past three decades. This book discusses and synthesizes the theoretical literature on the motivation and performance of international merger activities. Focusing on the UK as a top acquiring country in the European Union, the authors explore the recent trends in cross-border mergers and acquisitions, motives for cross-border mergers and acquisitions, the mergers integration process, home and host countries' macroeconomic consequences on mergers and acquisitions, and shareholder's wealth effects on CBM&A. This book explores and sheds much-needed light on the UK CBM&A market, what drives it, and what lessons can be learned for other regions around the globe.

cross border tax and accounting: International Taxation of Cross-border Leasing

Income Amar Mehta, 2005 This book discusses the practical issues faced by the banks, financial institutions, companies engaging in leasing as a form of asset financing, and their tax advisers. The book elaborately deals with the divergent tax treatment in the five most important leasing jurisdictions (ie, US, Japan, Germany, UK and Netherlands) in respect of transaction characterization, depreciation, income-recognition and anti-avoidance rules, as well as divergence in the relevant bilateral tax treaty provisions. Further, the book investigates how the parties to a cross-border leasing transaction may obtain tax advantages due to such divergent tax treatments, and whether and to what extent the general or specific anti-avoidance rules in the jurisdictions may neutralize the tax arbitrage opportunities. Finally, it examines how the framework of the EC Treaty may be relevant for cross-border leasing transactions between the EC Member States.

John Abrahamson, 2016-02-18 The most thorough treatment of its subject available, this book introduces and analyses the international tax issues relating to international manufacturing and distribution activities, extending from the tax regime in the country where the manufacturing activities are located, through to regional purchase and sales companies, to the taxation of local country sales companies. The book includes descriptions of 21 country tax systems and ten detailed case studies applying the analysis to specific examples. Detailed up-to-date attention is paid to the OECD Action Plan on Base Erosion and Profit Shifting (BEPS) and other measures against tax avoidance. As a full-scale commentary and analysis of international taxation issues for multinational manufacturing groups – including in-depth consideration of corporate structures, tax treaties, transfer pricing, and current developments – this book is without peer. cross border tax and accounting: *Attribution of Profits to Permanent Establishments* Michael

Lang, Raffaella Petruzzi, Alfred Storck, 2020-04-08 Attribution of Profits to Permanent Establishments: Issues and Developments The profit attribution to permanent establishments is one of the most controversial topics in international tax law. In recent years it was subject to various changes based on the introduction of the "Authorized OECD Approach" in 2008 and 2010, the outcomes of Final Report on OECD BEPS Action 7 and the Final Report on "Additional Guidance on the Attribution of Profits to a Permanent Establishment under BEPS Action 7" from 2018 (with the previous Discussion-Drafts). This publication discusses the most important issues and recent developments related to the attribution of profits to permanent establishments. Starting with an in-depth analysis on the commonalities and differences between the profit attribution provisions in modern double tax treaties (ie Art 7 AOA vs Art 9 OECD/UN Models), it further deals with topics such as profit attribution to PEs and PE exemptions (Art 5 para 4), profit attribution to agency PEs (Art 5 para 5 and 6), and profit attribution to a significant economic presence and to market states. This book is based on the outcomes of the presentations and discussions held during the WU Transfer Pricing Symposium that took place in October 2019 at the WU Vienna University of Economics and Business. The authors, apart from providing a theoretical background to the discussed issues, also present case studies that show how certain issues can be approached in practice. Every chapter ends with a summary of the opinions on the issues at stake of representatives of tax administrations, multinationals and tax advisories, which completes this essential practical guideline.

cross border tax and accounting: International Taxation of Permanent Establishments Michael Kobetsky, 2011-09-15 The effects of the growth of multinational enterprises and globalization in the past fifty years have been profound, and many multinational enterprises, such as international banks, now operate around the world through branches known as permanent establishments. The business profits article (Article 7) of the OECD model tax treaty attributes a multinational enterprise's business profits to a permanent establishment in a host country for tax purposes. Michael Kobetsky analyses the principles for allocating the profits of multinational enterprises to permanent establishments under this article, explains the shortcomings of the current arm's length principle for attributing business profits to permanent establishments and considers the alternative method of formulary apportionment for allocating business profits.

cross border tax and accounting: *International Tax Coordination* Martin Zagler, 2010-06-30 International taxation is a major research topic, and for a field of research at the intersection of so many disciplines there has been surprisingly little done across disciplinary boundaries. This book fills the gap by combining teams from business, economics, information science, law and political science to offer a unique and innovative approach to the issue of international tax coordination. All the chapters are written in collaboration between at least two authors from two different disciplines. This approach offers a rich and nuanced understanding of the many issues of international tax coordination. The book collects seven papers, each one a valuable contribution in itself, beginning with current problems of international taxation and finishing with potential solutions. The essays explore current EU legislation, tax avoidance and tax fraud, as well as double tax agreements, dividend repatriation and hybrid finance and tax planning. Providing methodological answers to the question of how to conduct interdisciplinary research, the book also gives an accessible introduction into research questions and answers that are important in related disciplines for scholars in various areas. This book will be of interest to postgraduates and researchers in the fields of economics, business, informational science, law and political science, as well as to professional accountants and tax lawyers.

cross border tax and accounting: *Gerhard G. Mueller: Father of International Accounting Education* Dale L. Flesher, 2010-07-27 Gerhard G Mueller is best known for his work in the area of international accounting, but his contributions have spanned many areas of accountancy teaching, research, and professional service. His books and leadership roles have made him the premiere international accountant of the 20th century.

cross border tax and accounting: *Cross-Border Life and Work* Peter Droege, Stefan Guldenberg, Marco J. Menichetti, Stefan Seidel, 2023-12-29 This book discusses the risks, challenges, and opportunities of cross-border work and life from a multidisciplinary and multilevel perspective, including (a) the individual, (b) the social and organizational, and (c) the regional levels, taking into consideration the diverse and multilayered social, economic, technological, and jurisdictional issues involved. Emerging public policies and advanced information technologies (IT) have created new opportunities for work and life that thrive in global value chains and markets. Life, in general, and work, in particular, are increasingly organized across borders of various kinds and are subject to rapid change. At the same time, life and work have been determined by 19th and 20th century infrastructures and technologies. As a consequence, new strategies and measures are required for both physical and virtual work and life spaces.

cross border tax and accounting: *Dealing with the Fragmented International Legal Environment* Turki Althunayan, 2009-12-02 Taxes are sometimes so fundamental to domestic

systems that they are almost impossible to change, as when the tax system is part of a nation's majority religion or is linked to another value deeply rooted in local communities, such as housing or farming. There is a danger in the WTO, a Geneva-based entity, making decisions for people living in distant locations with regard to tax issues related to their local needs and wants. The Saudi Arabian tax system exemplifies the tension between religion, tax and trade, because tax has a role in the country's religion and is an essential part of its laws. Therefore, there is a need for maintaining a delicate balance between local needs and international commitments with respect to taxation. This book aims to show directions in which legal order can be preserved as much as possible from within each country, and yet not imposed upon them, and which will help build a peaceful bridge between local and international factors that are important to shaping the global order.

cross border tax and accounting: Mumbai - An International Financial Centre India. Ministry of Finance. High Powered Expert Committee, 2007-04-19 Most financial services are now tradable across borders in an extremely competitive environment with buyers and sellers around the world having a choice of procuring services from competing international financial centres. The global international financial services (IFS) market in the 21st century is one in which competition is driven by rapid innovation in financial products, services, instruments, structures, and arrangements to accommodate and manage myriad requirements, risks and a ceaseless quest for cost reduction. Competitive advantage in IFS provision depends on seven key factors:- An extensive national, regional, global network of corporate and government client connections possessed by financial firms participating in an international finance centre- High level human capital specialized in finance, supported by a numerate labour force.- World-class telecommunications infrastructure- State-of-the-art IT systems- A well-developed, sophisticated open financial system- A system of financial regime governance that is amenable to operating on global 'best-practice' lines and standards- A 'hinterland advantage' in terms of either a national or regional economy (preferably both) whose growth is generating rapid growth in demand for IFS. The Ministry of Finance, Government of India established a High Powered Expert Committee in 2006 to study the feasibility of India's entry into the global market for IFS and that of Mumbai becoming an IFC. The Committee's report analyses Mumbai's strengths and weaknesses in terms of the above seven key factors essential for the success of an IFC. The report strives to deliver a nuanced appreciation of the likely costs and benefits of the path to an IFC, based on an understanding of which policy-makers can make a reasoned choice.

cross border tax and accounting: *International Tax Primer* Brian J. Arnold, 2019-01-14 Tax practitioners, multinational companies and national tax authorities have relied on this indispensable resource since its first edition nearly two decades ago. The Primer provides the reader with an introductory analysis of the major issues that a country must confront in designing its international tax rules and coordinating those rules with the tax systems of its trading partners, with numerous examples drawn from the practices of both developed and developing countries. This fourth edition follows the format and sequence of earlier editions but adds details on ongoing developments surrounding the Organisation for Economic Co-operation and Development's (OECD) base erosion and profit shifting (BEPS) project, updates to the OECD and UN Model Conventions, the 2017 US tax reform, the EU anti-tax avoidance directive, and continuing issues concerning the digital economy. The book strikes a balance between the specific and the general by illustrating the fundamental principles and structure of international tax with frequent reference to actual practice in a variety of countries. Coverage includes the following: • role of the tax adviser in planning international transactions; • taxation of residents on foreign income and of nonresidents on domestic income; • mechanisms used to mitigate the risks to taxpayers of international double taxation; • transfer pricing rules to prevent the avoidance of tax by multinational corporations; • anti-avoidance measures dealing with tax havens, treaty shopping, and other offensive tax planning activities; • overview and analysis of the provisions of bilateral tax treaties and the OECD and UN Model Treaties on which they are generally based; and • challenges posed by taxation of income derived from the digital economy. An extensive glossary of international tax terms is included. With

examples of typical international tax planning techniques and descriptions of the work of the major international organizations that play an important role with respect to international tax, the Primer remains the preeminent first recourse for professionals in the field. Although of greatest value to students, tax practitioners and government officials confronting international tax for the first time, this book is sure to continue in use by tax professionals at every level of experience and on a worldwide basis.

cross border tax and accounting: Cross-Border Mergers Thomas Papadopoulos, 2019-09-28 This edited volume focuses on specific, crucially important structural measures that foster corporate change, namely cross-border mergers. Such cross-border transactions play a key role in business reality, economic theory and corporate, financial and capital markets law. Since the adoption of the Cross-border Mergers Directive, these mergers have been regulated by specific legal provisions in EU member states. This book analyzes various aspects of the directive, closely examining this harmonized area of EU company law and critically evaluating cross-border mergers as a method of corporate restructuring in order to gain insights into their fundamental mechanisms. It comprehensively discusses the practicalities of EU harmonization of cross-border mergers, linking it to corporate restructuring in general, while also taking the transposition of the directive into account. Exploring specific angles of the Cross-border Mergers Directive in the light of European and national company law, the book is divided into three sections: the first section focuses on EU and comparative aspects of the Cross-border Mergers Directive, while the second examines the interaction of the directive with other areas of law (capital markets law, competition law, employment law, tax law, civil procedure). Lastly, the third section describes the various member states' experiences of implementing the Cross-border Mergers Directive.

cross border tax and accounting: A Common Consolidated Corporate Tax Base for Europe - Eine einheitliche Körperschaftsteuerbemessungsgrundlage für Europa Wolfgang Schön, Ulrich Schreiber, Christoph Spengel, 2008-04-24 Preface This book contains the proceedings of the International Tax Conference on the common consolidated corporate tax base (CCCTB) that was held in Berlin on 15 - 16 May 2007. The conference was jointly organised by the German Federal Ministry of Finance, the Centre for European Economic Research (ZEW), Mannheim, and the Max Planck Institute (MPI) for Intellectual Property, Competition and Tax Law, Munich. More than 250 participants from all over Europe and other regions, scholars, politicians, business people and tax administrators, discussed the European Commission's proposal to establish a CCCTB. Three panels of tax experts evaluated the common tax base with respect to structural elements, consolidation, allocation, international aspects and administration. The conference made clear that the CCCTB has the potential to overcome some of the most intriguing problems of corporate income taxation within the Common Market. Common tax accounting rules substantially reduce compliance and administrative costs. Consolidation of a group's profits and losses effects cross-border loss compensation which removes a major tax obstacle for European cross-border investment. At the same time, tax planning with respect to financing and transfer pricing is pushed back within the European Union. Moreover, as far as the CCCTB applies, member states are able to remove tax provisions that are targeted at cross border tax evasion and that might be challenged by the jurisdiction of the European Court of Justice.

cross border tax and accounting: Determinants of Cross-Border M&As in Developing Countries Maximilian Thomas, 2020-07-31 During the last three decades, the importance of cross-border mergers and acquisitions (M&As) as a favourite top-level managerial strategy of multinational enterprises (MNEs) and national champions has increased significantly. The global value of cross-border M&As has grown from around USD 100 billion in 1990 to USD 815 billion in 2018, peaking in 2007 with over USD 1 trillion just before the outbreak of the global financial crisis. This development is not surprising, since the ongoing globalization and the changing global market landscape lead to more complex challenges for companies. In order to face the increasing intensity of competition that accompanies the global integration of markets, cross-border M&As constitute an appropriate way of maintaining competitiveness and creating added value. The acquisition of pre-existing foreign assets enables MNEs not only to exploit synergies and growth opportunities but also to overcome latecomer disadvantages. In addition, M&As offer a time advantage over organic growth strategies such as greenfield investments, which is particularly important considering the dynamic market conditions and the shortening product life cycles. This thesis examines the research question of which country-specific factors determine the volume of inbound cross-border M&As in developing economies. In general, the choice of a cross-border acquisition as an entry mode into a foreign market is influenced by three types of factors: (1) firm-specific factors such as prior acquisition experience, product diversity and core competences; (2) industry-specific factors such as technological, sales and marketing intensity; and (3) country-specific factors such as market size and institutional quality. While firm- and industry-specific factors also play a role in domestic M&As, country-specific factors are a peculiarity in cross-border M&As. According to the research question, the aim of this thesis is to identify country-specific factors that represent determinants. On the one hand, findings on country-specific determinants might be helpful to explain why some countries (e.g. China) receive more cross-border M&As than others (e.g. India). On the other hand, the results reveal which interests transnational companies pursue and how they change. Drawing on this evidence, policy makers and companies may be able to influence the determining factors in order to stimulate or impede inbound investments in form of M&As.

cross border tax and accounting: Chinese Tax Law and International Treaties Lorenzo Riccardi, 2013-05-30 The People's Republic of China's tax policies and international obligations are as multifaceted and dynamic as they are complex, developing closely with the nation's rise to the world's fastest-growing major economy. Today, after decades of reform and the entry into the World Trade Organization, China has developed regulatory systems that enable it to provide stable administration, including a tax structure. China's main tax reform can be attributed to the enactment of the Enterprise Income Tax Law, which came into effect on January 1, 2008. Chinese tax regulations include direct taxes, indirect taxes, other taxes, and custom duties and from a collection point of view, China's tax administration adopts a very devolved system, with revenue collected and shared between different levels of government in accordance with contracts between the different levels of the tax administration system. With respect to international treaties, China has established a network of bilateral tax treaties and regional free trade agreements. This publication describes in detail China's complex tax system and policies, as well as major bilateral treaties in which China has entered into using country-by-country analysis. Lorenzo Riccardi is Tax Advisor and Certified Public Accountant specialized in international taxation. He is based in Shanghai, where he focuses on business and tax law, assisting foreign investments in East Asia. He is an auditor and an advisor for several corporate groups and he is partner and Head of Tax of the consulting firm GWA, specializing in emerging markets.
