csu east bay continuing education: Online Teaching and Learning in Higher Education during COVID-19 Roy Chan, Krishna Bista, Ryan Allen, 2021-08-12 This timely volume documents the immediate, global impacts of the coronavirus pandemic (COVID-19) on teaching and learning in higher education. Focusing on student and faculty experiences of online and distance education, the text provides reflections on novel initiatives, unexpected challenges, and lessons learned. Responding to the urgent need to better understand online teaching and learning during the COVID-19 pandemic, this book investigates how the use of information and communication technologies (ICT) impacted students, faculty, and staff experiences during the COVID-19 lockdown. Chapters initially look at the challenges faced by universities and educators in their attempts to overcome the practical difficulties involved in developing effective online programming and pedagogy. The text then builds on these insights to highlight student experiences and consider issues of social connection and inequality. Finally, the volume looks forward to asking what lessons COVID-19 can offer for the future development of online and distance learning in higher education. This engaging volume will benefit researchers, academics, and educators with an interest in online teaching and eLearning, curriculum design, and more, specifically those involved with the digitalization of higher education. The text will also support further discussion and reflection around pedagogical transformation, international teaching and learning, and educational policy more broadly.

csu east bay continuing education: Tropical Biodiversity: Why Should We Care? Ana Maria Rocha de Almeida, Chelsea D. Specht, 2019-06-07 When we look at our planet's species distribution, we observe a very interesting pattern: as we move from the Poles to the Equator, the number of species drastically increases. This is what has been called 'latitudinal gradient of species diversity'. In short, it means that tropical areas, which are located between the Tropic of Cancer and the Tropic of Capricorn, harbor a greater number of species than temperate areas. We still don't know exactly what causes (or have caused) this phenomenon, but we know that it resulted in high endism, that is, a large number of animals and plants unique to these areas. The tropical areas of the globe are an intricate patchwork of various ecosystems. Tropical ecosystems can vary from rainforests to deserts; from savannahs to mangroves, and we have a lot to learn from them. However, in recent years we have witnessed an increase in rates of habitat destruction, particularly in the tropics. Currently, many tropical ecosystems are under threat, as vast areas are devastated to give space to cities, agriculture, and cattle farms. As tropical areas vanish, so do species previously unknown to us, as well as ecological processes specific to these environments. Moreover, due to its global importance, devastation of tropical areas has potential impacts on other non-tropical ecosystems, and may exacerbate climate change, as well as influence the spread of tropical diseases. On the other side of this battle, there are many scientists that dedicated themselves to the study of the fascinating tropical biodiversity. This collection of articles aims at highlighting their contributions to our understanding of tropical patterns and processes leading to this incredible biodiversity. It focuses on the wonders of the tropical areas of the globe, by asking, amongst others, the following questions: Which species of plants and animals are found in tropical areas? What can we learn about tropical ecology and how can this knowledge help us conserve these ecosystems for future generations?

csu east bay continuing education: Using ROI for Strategic Planning of Online Education Kathleen S. Ives, Deborah M. Seymour, 2023-07-03 Published in association with While higher education has rarely employed ROI methodology—focusing more on balancing its revenue streams, such as federal, state, and local appropriations, tuition, and endowments with its costs—the rapid growth of online education and the history of how it has evolved, with its potential for institutional transformation and as a major source of revenue, as well as its need for substantial and long-term investment, makes the use of ROI an imperative. This book both demonstrates how ROI is a critical tool for strategic planning and outlines the process for determining ROI. The book's expert contributors lay the foundation for developing new practices to meet the compelling challenges of online education and identify new models that offer the potential for transforming the educational system, meeting new workforce demands, and ultimately improving the economy. The opening chapters of the book explore the dimensions of ROI as a strategic planning process, offering guiding

principles as well as methods of measurement and progress tracking, and demonstrate the impact of ROI across the institution. The book identifies the role of previously overlooked constituents—such as online professionals as critical partners for developing institutional strategy and institutional stakeholders for vital input on inclusivity, diversity, and equity—and their increasingly important role in impacting the ROI of online programs. Subsequent chapters offer a range of approaches to ROI reflecting the strategic priorities and types of return institutions seek from their investment in online programming, whether they be increased profits or surpluses via reduced expenses or increased operating efficiencies or the development of increased brand awareness for their programs. They also address the growing competitive environment of recent commercial entrants and online program managers (OPMs). The contributors offer best practices for setting goals and identifying benchmarks for increasing and measuring payback, including the creation of cross-functional ROI teams from across an institution; and further address the advantages and disadvantages of universities partnering with external providers, or even other colleges and universities, to provide online programs with them and for them. This book offers presidents and senior administrators, faculty engaged in shared governance, online learning administrators, and stakeholders representing student, community and employer interests with a rigorous process for developing an online strategy.

csu east bay continuing education: Doctoral Students' Identities and Emotional Wellbeing in Applied Linguistics Bedrettin Yazan, Ethan Trinh, Luis Javier Pentón Herrera, 2023-03-31 This edited volume comprises an insightful collection of international autoethnographies from doctoral candidates in the field of applied linguistics, narrating and analyzing their student experiences to problematize and challenge the dominant and oppressive cultures of academia. Through 12 select contributions, the book examines the intersection of identity work and emotional labor in the doctoral student journey, sharing insights into the potential of autoethnography for self-reflection, community building, and healing in doctoral studies. Contributors examine their doctoral journeys through personal narratives and testimonials to understand their own experiences, agency, identity, and emotions, encouraging current or former doctoral students to engage in the critical reflection of their own experiences. Chapters are divided into four themes: interrelating multiple identities, navigating and negotiating in-betweenness, engaging emotions and wellbeing, and establishing support systems. Offering unique perspectives from a global spread of Ph.D. candidates, this book will be highly relevant reading for researchers and prospective or current doctoral students of applied linguistics, language education, TESOL, and LOTE. It will also be of interest to those interested in higher education, dissertation research, and autoethnography as a method.

csu east bay continuing education: Race, Class, and Choice in Latino/a Higher Education Sarah M Ovink, 2016-11-12 This book is an in-depth study which examines the lives of fifty ambitious Latino/a high school seniors in the San Francisco East Bay Area, following their entrance into college and career pathways over several years. This book examines the social forces that contributed to near-universal college attendance among these mostly low-income Latinos/as, all of whom attended fairly typical public schools. In an era of increased economic insecurity, decreased funding for schools, and rising college tuition, this book provides a balanced look at the individual choices and systemic constraints influencing today's "college-for-all" orientation, while pointing the way toward possibilities for making college pathways smoother for all.

csu east bay continuing education: Transformative Practices for Minority Student Success Dina C. Maramba, Timothy P. Fong, 2023-07-03 Between 2000 and 2015 the Asian American Pacific Islander population grew from nearly 12 million to over 20 million--at 72% percent recording the fastest growth rate of any major ethnic and racial group in the US. This book, the first to focus wholly on Asian American and Native American Pacific Islander Institutions (AANAPISIs) and their students, offers a corrective to misconceptions about these populations and documents student services and leadership programs, innovative pedagogies, models of community engagement, and collaborations across academic and student affairs that have transformed student outcomes. The contributors stress the importance of disaggregating this population that is composed of over 40

ethnic groups that vary in immigrant histories, languages, religion, educational attainment levels, and socioeconomic status. This book recognizes there is a large population of underserved Asian American and Pacific Islander college students who, given their educational disparities, are in severe need of attention. The contributors describe effective practices that enable instructors to validate the array of students' specific backgrounds and circumstances within the contexts of developing such skills as writing, leadership and cross-cultural communication for their class cohorts as a whole. They demonstrate that paying attention to the diversity of student experiences in the teaching environment enriches the learning for all. The timeliness of this volume is important because of the keen interest across the nation for creating equitable environments for our increasingly diverse students. This book serves as an important resource for predominantly white institutions who are admitting greater numbers of API and other underrepresented students. It also offers models for other minority serving institutions who face similar complexities of multiple national or ethnic groups within their populations, provides ideas and inspiration for the AANAPISI community, and guidance for institutions considering applying for AANAPISI status and funding. This book is for higher education administrators, faculty, researchers, student affairs practitioners, who can learn from AANAPISIs how to successfully engage and teach students with widely differing cultural backgrounds and educational circumstances.
