study documents Hmong's involvement in the Secret War in Laos, their refugee exodus from Laos to the refugee camps in Thailand, and the challenges to find third countries to take Hmong refugees. At the time, Hmong and other highlander refugees from Laos were considered unsuitable to be resettled into the United States. He provides detailed research on the adaptation of Hmong Americans to their new lives in the United States, facing discrimination and prejudice, and the advancement of Hmong Americans over the past 40 years. He presents the Hmong American community as an uprooted refugee community that grew from a small population in 1975 to more than 300,000 by the year 2015; spreading to all 50 states while becoming a diverse and complex American ethnic community. To get better insight into their diversity, complexity, and adaptation to different localities, Kou Yang uses the Hmong communities in Montana, Fresno and Denver as case studies. The progress of Hmong Americans over the past 4 decades is highlighted with a list of many achievements in education, high-tech, academia, political participation, the military and other fields. Readers of this book will gain a deeper understanding of the challenges, complex and diverse experience of the Hmong American community. csu fresno electrical engineering: *Transforming Healthcare in Africa* Robert Dibie, 2025-01-14 The current available books and literature that shed light on health policies in many African countries are limited. Transforming Healthcare in Africa: A Comparative Analysis by Professor Robert Dibie examines the key players in the health system game in many African countries. It explores the regulatory regimes that impact the health systems, such as the Ministry of Health. It also provides few case studies of the relationship between the government, the environment, and their citizens. Apart from filling the gap in the healthcare policy in African literature, the authors also seek to examine the impacts of weak health policies and the inability to effectively formulate solid initiatives for capacity building that could lead to enhanced healthcare delivery for all their citizens. Thus, Dibie's book provides evidence to inform scholarly discussion on the best approaches to strengthen healthcare delivery and public health capacity in many African countries. The book also sought to answer six research questions: (1) How is healthcare delivery perceived by African countries? (2) How are healthcare policies implemented in urban, and rural regions or local governments in African countries? (3) To what extent are current health services delivered to respond to all citizens' needs in African countries? (4) What is the current capacity for rural or local governments to effectively engage in health service delivery? (5) How can citizens living in rural and urban regions be empowered in the health development delivery system? and (6) Which is the best evidence-based management system adopted to improve affordable healthcare

system in many African countries? It also fills the gap in the literature of health systems in Africa.

csu fresno electrical engineering: Equity in STEM Education Research Alberto J. Rodriguez, Regina L. Suriel, 2022-09-06 This book focuses on the creative and transformative work of scholars who are advancing social justice through science/STEM education with limited resources. It draws attention to the significant body of work being conducted in various contexts so that readers could reflect and appreciate how much broader and transformative our impact could be if funding agencies, policy makers, and other researchers would widen their perspective and seek to promote social justice-driven scholarship. Public funding for STEM research on K-12 and teacher education that targets special populations is often limited and tends to favor mainstream research. This book contains case studies on innovative and promising STEM research with a focus on equity, diversity and social justice that are funded with limited or no public funding. It also presents anecdotes from authors in relation to their struggles in either securing funding for their reported study or seeking to publish its findings. This provides more context to the challenges of conducting non-mainstream research in science/STEM education. Most of the contributors are scholars of color and/or women conducting research with traditionally marginalized populations in science/STEM. Thus, this book offers an additional venue to share the voices of marginalized scholars and allies seeking to broaden our understanding of the challenges and successes of promoting equity, diversity, and social justice in various educational contexts.
