Through the lenses of courses in anthropology, ESL, gerontology, management information systems, nursing, nutrition, psychology, public health, and sociology, the contributors offer examples of intergenerational and interdisciplinary practice, and share cutting-edge academic creativity to model how to employ community service learning to promote social change.

csuf health and human development: Razor Wire Women Jodie Michelle Lawston, Ashley E. Lucas, 2011-04-11 Offering nuanced portraits of women's lives inside razor wire and prison walls, *Razor Wire Women* puts incarcerated women in dialogue with scholars, artists, educators and activists who live outside of prisons but work on issues connected to the prison industrial complex. Women make up the fastest-growing group of the U.S. prison population, yet prison scholarship largely overlooks the struggles of incarcerated women, and their voices are often silenced both in and out of the prison infrastructure. From the vantage points of those both inside and outside of prisons, this collection of essays and art illuminates many of the distinct experiences and concerns of incarcerated women, including those of girls in prison, abuse and rape, the policing of women, incarcerated motherhood, mental health issues in prisons, incarcerated women's artistic and cultural production, and prisons' impact on families, health, and sexuality. Combining the transcendence, hope and clarity of art with powerful analytical and conceptual tools, *Razor Wire Women* reveals the gendered dimensions of the incarceration now experienced by a growing number of women in the U.S.

csuf health and human development: *Social Psychology* Randal W. Summers, 2016-12-12

This book provides an introduction to social psychology that covers its history, theories, and core concepts. It explains intrapersonal (how others influence our views about ourselves) and interpersonal (how we think about and act toward other people) applications of this discipline in today's society. Human beings are social by nature. Because of this, the people around us have a profound impact on how we think about ourselves and others—from our sense of self esteem to our opinions and attitudes to our interactions in a group setting. *Social Psychology: How Other People Influence Our Thoughts and Actions* describes these subtle but powerful effects in our daily lives, offering a complete and balanced view of the topic. Readers will discover the history of social psychology, grasp its theories and core concepts, learn about important issues and debates related to this topic, and see how these ideas are directly applicable to therapy and other real-world situations. Chapters cover how an individual's self-concept is developed and the various social forces on it, how a social psychology experiment may be conducted, and examples of social psychology in everyday life, such as group dynamics and cultural phenomena. Readers will also see how social psychology plays a role in our criminal justice system, including in the context of the prison system population; in the cultural issues associated with Latino and Native American populations; in our social collective concern about mass shootings, epidemics, and terrorism; and in the dynamics, processes, and tactics of a nationwide presidential election campaign seeking to influence the masses.
