cte early childhood education: Reinventing STEM in Early Childhood Education Eugene Geist, 2025-05-09 Teaching STEM to young children is about more than helping them learn their numbers and facts. It is an important and complex process that, to be effective, should honor the way children's brains are developing. This book outlines how early childhood educators can best support young children's STEM journeys as children naturally take in information about their environment, synthesize it, and grow in the process. This comprehensive text details different theories of learning; research on how young brains develop; practical information on preparing your

environment and yourself for teaching STEM to children; guidance for supporting diverse populations of students; and developmental guidelines, sample standards, resources, and lesson plans. Organized chronologically, the book connects relevant STEM topics with each developmental age range and outlines common school standards for each grade. Reinventing STEM in Early Childhood Education is meant to be a core text for preservice teachers in math and science methods courses and is also important reading for teacher educators and professional development programs.

cte early childhood education: An Investigation of the Post-Graduation Outcomes of High School Students Completing an Early Childhood Education Career and Technical Program Margot Denise Bishop, 2020 ABSTRACTThe quality of care children receive from birth to kindergarten sets them on a trajectory for successful entry to school. Children who receive high-quality care, which is provided by qualified early educators with demonstrated mastery of the essential early learning core competencies, enter school ready to learn. Shortages of credentialed early educators are an obstacle to achieving this goal. This study investigated the employment and educational outcomes for high school students who graduated from early childhood career and technical education programs (EC-CTE) in 16 school districts in Florida and explored whether they chose to work in early learning settings directly following graduation, pursue higher education in the field of early education, or pursue career or educational options outside the field of early education. All participants received a T.E.A.C.H. Early Childhood® scholarship to pay for the National Child Development Associate® (CDA) credential™, which is the entry-level industry standard for early educators. Information gathered from scholarship applications as well as data collected from a post-graduation survey informed the findings of this study. In general, participants felt very prepared to work in preschool settings following the completion of their EC-CTE programs and almost half were employed in early childhood settings immediately following high school. For those who worked in jobs outside the Early Childhood Education (ECE) field, more than half said they were looking for positions in early education. Most participants enrolled in college directly following high school and those who selected a major focused on helping fields such as elementary education, nursing, and early care and education. These findings suggest that high school EC-CTE programs provide a strong pipeline to the early learning career pathway and that high school CTE programs should be considered a viable resource to increase the number of credentialed early educators entering the workforce. This study can be used to inform policy that adequately supports the early learning workforce and attracts and retains the qualified staff necessary to provide high quality early care and education for young children in Florida.

cte early childhood education: Rethinking School-University Partnerships Prentice T.

Chandler, Lisa Barron, 2021-05-01 Rethinking School-University Partnerships: A New Way Forward provides educational leaders in K-12 schools and colleges of education with insight, advice, and direction into the task of creating partnerships. In current times, colleges of education and local school districts need each other like never before. School districts struggle with pipeline, recruitment, and retention issues. Colleges of education face declining enrollment and a shifting educational landscape that fundamentally changes the way that teachers are trained and what local school districts expect their teachers to be able to do. It is with these overlapping constraints and converging interests that partnerships emerge as a foundational strategy for strengthening the education of our teachers. With nearly 80 contributors from 16 states (and Jamaica) representing 39 educational institutions, the partnerships described in this book are different from the ways in which colleges of education and school districts have traditionally worked with one another. In the past, these loose relationships centered primarily on student teaching and/or field experience placements. In this arrangement, the relationship was directed towards ensuring that the local schools were amenable to hosting students from the college of education so that the student/candidate could complete the requirements to earn a teaching license. In our view, this paradigm needs to be enlarged and shifted.

cte early childhood education: *Handbook of Research on Promoting Social Justice for Immigrants and Refugees Through Active Citizenship and Intercultural Education* Barreto, Isabel María Gómez, 2021-06-11 Migration movements have been a constant in the societies of the past, as well as in postmodern society. However, in the past ten years, the increase in political, economic, and religious conflict amongst nations; the increase of the poverty index; and many and various natural disasters have duplicated the forced displacement of millions of people across the seven continents of the planet. This situation brings important challenges in terms of the vulnerability, inequity, and discrimination that certain peoples suffer. Professionals from the fields of the social sciences, education, psychology, and international law share the fact that education represents an opportunity for children and young migrants to become members with full rights in the societies they arrive in. Empirical studies show that the implementation of the right to education for migrants presents some challenges and dilemmas to the governments of host countries

and more specifically to the education centers, NGOs, universities, and the professionals working in them, hence the need for more research on these issues of immigration, refugees, social justice, and intercultural education. The Handbook of Research on Promoting Social Justice for Immigrants and Refugees Through Active Citizenship and Intercultural Education provides visibility to issues such as the increase in migration and displacement and the difficulties in political agreements, educational contexts, and in cultural issues, stigmatization, vulnerability, social exclusion, racism, and hatred amongst host communities. This book gives possible solutions to this current complex situation and helps foster and promote sensitivity, perspective, and critical thinking for a respectful and tolerant coexistence and promotion of equity and social justice. The chapters promote cultural diversity and inclusion in classrooms by offering knowledge, strategies, and research on organizational development for educational institutions and multicultural environments. This book is essential for administrators, policymakers, leaders, teachers, practitioners, researchers, academicians, and students interested in the promotion of social justice in education for immigrants and refugees.

Morest offers a three-pronged approach for community college leaders seeking to improve the success of their students. First, community college leaders need to look around at the technological transformation that has occurred in other service sectors and import some of these ideas to student services. Second, community college leaders need to explicitly socialize their students to become college students and to bond with their community college. Finally, improving the quality of teaching is particularly important with regard to developmental education, where students are attempting to master material that they have ostensibly been taught in the past.
