Located in Franklin Township, this network integrates skilled physicians, advanced medical technology, and patient-focused care models to address the health needs of diverse populations. The network is part of a larger healthcare system known for its commitment to excellence, compassionate care, and innovative treatments. Patients benefit from coordinated care approaches that streamline communication between specialists and primary care providers, ensuring continuity and quality throughout their healthcare journey.

History and Mission

Founded to serve the growing needs of the Franklin Township community, the Franciscan Physician Network has built a reputation for delivering accessible and reliable family medicine services. Its mission centers on improving health outcomes by providing comprehensive care that emphasizes prevention and education. The network's guiding principles include respect, integrity, and a patient-first philosophy, which underpins every aspect of their clinical practice.

Physician Expertise and Team Approach

The family medicine providers within the network possess extensive expertise across all age groups, from pediatrics to geriatrics. They are supported by a multidisciplinary team that includes nurse practitioners, physician assistants, and care coordinators. This collaborative approach ensures that patients receive well-rounded care tailored to their individual health profiles and lifestyle considerations.

Comprehensive Family Medicine Services

Franciscan Physician Network Franklin Township family medicine offers a full range of primary care services designed to maintain and improve patient health throughout their lives. Their services encompass preventive care, diagnosis and treatment of acute illnesses, chronic disease management, and health education. This holistic approach enables patients to receive consistent care under one roof, minimizing the need for multiple referrals and appointments.

Preventive Care and Wellness

Preventive care is a cornerstone of the family medicine practice at Franciscan Physician Network. Routine screenings, immunizations, and health risk assessments are conducted to detect potential health issues early. This proactive strategy helps patients avoid the development of serious conditions and supports long-term wellness.

Chronic Disease Management

Managing chronic illnesses such as diabetes, hypertension, asthma, and heart disease is a significant focus area. The network utilizes evidence-based protocols and personalized treatment plans to help patients control their conditions effectively. Regular monitoring and patient education empower individuals to take an active role in their health management.

Pediatric and Geriatric Care

Family medicine providers deliver age-appropriate care for both children and older adults. Pediatric services include growth and development monitoring, vaccination schedules, and treatment of common childhood illnesses. Geriatric care focuses on managing multiple health issues, medication reviews, and improving quality of life for elderly patients.

Acute Illness and Injury Treatment

Patients can receive timely evaluation and treatment for common acute conditions such as infections, minor injuries, and seasonal illnesses. The network's family medicine physicians are equipped to handle these issues promptly, ensuring quick recovery and minimizing complications.

franciscan physician network franklin township family medicine: *Fundamentals of Family Medicine* A.K. David, D.M. Phillips, J.E. Scherger, S.A. Fields, 2013-03-09 Fundamentals of Family Medicine, Third Edition, describes the current approach to common problems in family practice. The book tells how family physicians provide high-quality, comprehensive, and ongoing health care for patients and families, based on current evidence and time-tested methods in clinical practice. Clinical scenarios that include case studies and questions for group discussion reinforce the book's clinical topics. The clinical scenarios all concern members of the Nelson family- a multigenerational extended family whose members visit the family physician with a variety of health concerns and whose dynamics evolve from chapter to chapter. The discussion questions allow the group to consider both the biomedical and psychosocial aspects of problems such as headache, obstructive airway disease, diabetes mellitus, athletic injuries, domestic violence, care of the dying patient, and the family physicians's role in dealing with terrorist events. The book is intended to be a reference source for the care of diseases family physicians are likely to see and as the course textbook for medical students in family medicine clerkships in medical school. This book will help health professionals provide up-to-date care for their patients, and will allow students to view clinical issues through the eyes of the family physician. Fundamentals of Family Medicine, Third Edition, ideally is used as a companion to Family Medicine: Principles and Practice, Sixth Edition, edited by Robert B. Taylor et al.

franciscan physician network franklin township family medicine: *Family Medicine* Paul M. Paulman, Robert B. Taylor, Audrey A. Paulman, Laeth S. Nasir, 2022-01-21 Since the publication of the 7th edition of this book, there has been a remarkable increase in information in several clinical areas, including cardiology, immunology and oncology. This rapid knowledge expansion has led to practice changes for family physicians and other primary care providers. Patients are now discharged from tertiary care hospitals to their home communities with life sustaining left ventricular assist "heart pumps". Hepatitis C, once an incurable illness, is now routinely cured. Oncology treatment regimens are increasingly becoming ambulatory and individualized. The

decreased cost and increasing availability of health monitoring devices will make it possible for physicians to remotely check on the health status of their patients in their homes. With the ongoing and worsening shortage of family physicians across the US, the practice model for family medicine in the future may tend toward a family physician supervising a cast of mid-level providers as they care for a panel of patients, versus the physician providing the majority of care. All of these changes will require practice pattern changes and a need for up to date sources of information for the family physician. In addition, the “family” of family medicine academic organizations is undertaking a major review of the practice, training, funding and evaluation of all aspects of family medicine. Eight family medicine organizations have launched the “Family Medicine for America’s Health” (FMAHealth) with the expressed purpose “to strategically align work to improve practice models, payment, technology, workforce and education, and research to support the triple aim”. This project has moved past the study phase and will soon move to the implementation phased. This book is organized into short, focused chapters almost exclusively dedicated to topics relevant to daily practice. All lead authors are themselves accomplished family physicians who can specifically address the needs, concerns, and interests of this crucial profession. As one of the key reference textbooks for family medicine, it is very important to provide the most up-to-date knowledge to support learners and practitioners of family medicine in the face of rapidly expanding clinical knowledge and the extensive self-examination of family medicine. *Family Medicine: Principles and Practice*, 8th Edition, is a must-have reference for medical students, residents, practicing physicians, nurse practitioners and physician assistants with an active role in patient care.

franciscan physician network franklin township family medicine: Urban Family Medicine Richard B. Birrer, 1987 Now, more than ever, Family Medicine is alive and well in the United States. The base of this medical specialty has traditionally been in the smaller cities, suburban communities, and rural areas of this country. Over the past decade, however, there has been a resurgence of interest in primary care in our major metropolitan areas as a solution to the high tech subspecialty pace of the tertiary care environment. A rebirth of urban family medicine has accompanied these pioneering efforts. To date, the accomplishments are substantial and the prospects are bright. There is still a long way to go and there are a significant number of hurdles to cross. Although diseases are generally the same wherever you are, their effects as illness on the individual and the family are strongly influenced by the environment and social milieu. Urban families have distinctive and diverse problems-cultural, economic, and ethnic. Training programs situated in the large cities must recognize these issues and include special emphasis on the situations that the family physician is likely to encounter during and after his training. There is very little research literature on the background and nature of special urban problems and these areas are the subject of several chapters of this long overdue volume devoted specifically to urban family medicine. Dr. Birrer has persuaded true experts to share their knowledge with the reader.

franciscan physician network franklin township family medicine: Taylor's Manual of Family Medicine Paul M. Paulman, Audrey A. Paulman, Kimberly Jarzynka, Nathan P. Falk, 2015 Written from the family physician's perspective, this text provides practical, accessible information on the full spectrum of clinical problems in primary care. It emphasises ambulatory care, pertinent hospital-based and home-based problems, and focuses on disease prevention and health maintenance.

franciscan physician network franklin township family medicine: Family Medicine Robert B.
