Math is a real-life tool that points us to God and helps us explore His creation, yet it often comes across as dry facts and meaningless rules. Here at last is a curriculum that has a biblical worldview integrated throughout the text and problems, not just added as an afterthought. The resources in the Teacher Guide will help students master and apply the skills learned in the Student Textbook. What does this Teacher Guide include? fractions worksheet with answers: The Core: Teaching Your Child the Foundations of Classical Education Leigh A. Bortins, 2010-06-08 In the past, correct spelling, the multiplication tables, the names of the state capitals and the American presidents were basics that all children were taught in school. Today, many children graduate without this essential knowledge. Most curricula today follow a haphazard sampling of topics with a focus on political correctness instead of teaching students how to study. Leigh Bortins, a leading figure in the homeschooling community, is having none of it. She believes that there are core areas of knowledge that are essential to master. Without knowing the multiplication tables, children can't advance to algebra. Without mastery of grammar, students will have difficulty expressing themselves. Without these essential building blocks of knowledge, students may remember information but they will never possess a broad and deep understanding of how the world works. In The Core, Bortins gives parents the tools and methodology to implement a rigorous, thorough, and broad curriculum based on the classical model, including: - Rote memorization to cement knowledge - Systematic learning of geography, historical

facts, and timelines - Reading the great books and seminal historical documents instead of adaptations and abridged editions - Rigorous training in math and the natural sciences
