framework us history regents: The Great Speckled Bird Catherine Cornbleth, Dexter Waugh, 2012-12-06 This unique volume takes readers behind the scenes for an insider/outsider view of education policymaking in action. Two state-level case studies of social studies curriculum reform and textbook policy (California and New York) illustrate how curriculum decision making becomes an arena in which battles are fought over national values and priorities. Written by a New York education professor and a California journalist, the text offers a rare blend of academic and journalistic voices. The great speckled bird is the authors' counter-symbol to the bald eagle--a metaphor representing the racial-ethnic-cultural diversity that has characterized the U.S. since its beginnings and the multicultural reality of American society today. The text breaks new ground by focusing on the intersections of national debates and education policymaking. It situates the case studies within historical and contemporary cultural contexts--with particular attention to questions of power and knowledge control and how influence is exercised. By juxtaposing the contrasting cases of California and New York, the authors illustrate commonalities and differences in education policymaking goals and processes. By sharing stories of participants at and behind the scenes, policymaking comes alive rather than appearing to result from impersonal forces or factors.

framework us history regents: National History Standards Linda Symcox, Arie Wilschut, 2009-04-01 As educators in the United States and Europe develop national history standards for K-12 students, the question of what to do with national history canons is a subject of growing concern. Should national canons still be the foundation for the teaching of history? Do national canons develop citizenship or should they be modified to accommodate the new realities of globalization? Or should they even be discarded outright? These questions become blurred by the debates over preserving national heritages, by so-called 'history wars' or 'culture wars,' and by debates over which pedagogical frameworks to use. These canon and pedagogical debates often overlap, creating even more confusion. A misconceived "skills vs. content" debate often results. Teaching students to think chronologically and historically is not the same as teaching a national heritage or a cosmopolitan outlook. But what exactly is the difference? Policy-makers and opinion leaders often confuse the pedagogical desirability of using a 'framework' for studying history with their own efforts to reaffirm the centrality of national identity rooted in a vision of their nation's history as a way of inculcating citizenship and patriotism. These are the issues discussed in this volume." Today's students are citizens of the world and must be taught to think in global, supranational terms. At the same time, the traditionalists have a point when they argue that the ideal of the nation-state is the cultural glue that has traditionally held society together, and that social cohesion depends on creating and inculcating a common national culture in the schools. From an educational perspective, the problem is how to teach chronological thinking at all. How are we to reconcile the social, political and intellectual realities of a globalizing world with the continuing need for individuals to function locally as citizens of a nation-state, who share a common past, a common culture, and a common political destiny? Is it a duty of history education to create a frame of reference, and if so, what kind of frame of reference should this be? How does frame-of-reference knowledge relate to canonical knowledge and the body of knowledge of history as a whole?

framework us history regents: A Case for Change in Teacher Preparation Julie Gorlewski, Amanda Winkelsas, Suzanne N. Rosenblith, Corrie Stone-Johnson, Elisabeth Etopio, David Gorlewski, Tiffany Karalis Noel, Bobbie Finocchio, Amanda Seccia, Ling Zhai, Erin Kearney, Xiufeng Liu, Nooshin Shafaei, Tanika Shedrick, 2021-08-19 Why are preservice teachers often told by veteran teachers to forget what you learned in teacher preparation programs? Why is there a gap between pedagogical practices employed at schools and those taught at colleges and universities? And why, after evidence from countless studies, are there still so few teachers of color working in

our rapidly diversifying schools? These questions are addressed in this book, which describes a reconceptualized teacher preparation program based on a teacher residency model. This model is grounded in three core beliefs: first, that teacher quality is a shared responsibility between universities and school districts; second, that all students have a right to high-quality teachers who are as racially, ethnically, and linguistically diverse as the students they teach; and third, that for education to be transformative, future educators must have the right balance of theoretical knowledge and practical experiences grounded in specific contexts. Through a combination of rich description and qualitative and quantitative program data, the authors make the case that university programs focused on the communities they serve can ensure more effective, learner-ready teachers who remain in the profession longer. By providing a detailed blueprint for program development, the contents of this book will be of value and interest to educational leaders, policy makers, and researchers.

framework us history regents: *Teaching Recent Global History* Diana B. Turk, Laura J. Dull, Robert Cohen, Michael R. Stoll, 2014-03-05 *Teaching Recent Global History* explores innovative ways to teach world history, beginning with the early 20th century. The authors' unique approach unites historians, social studies teachers, and educational curriculum specialists to offer historically rich, pedagogically innovative, and academically rigorous lessons that help students connect with and deeply understand key events and trends in recent global history. Highlighting the best scholarship for each major continent, the text explores the ways that this scholarship can be adapted by teachers in the classroom in order to engage and inspire students. Each of the eight main chapters highlights a particularly important event or theme, which is then complemented by a detailed discussion of a particular methodological approach. Key features include: • An overarching narrative that helps readers address historical arguments; • Relevant primary documents or artifacts, plus a discussion of a particular historical method well-suited to teaching about them; • Lesson plans suitable for both middle and secondary level classrooms; • Document-based questions and short bibliographies for further research on the topic. This invaluable book is ideal for any aspiring or current teacher who wants to think critically about how to teach world history and make historical discussions come alive for students.

framework us history regents: *A Pedagogical Design for Human Flourishing* Cynthia McCallister, 2022-03-28 In *A Pedagogical Design for Human Flourishing: Transforming Schools with the McCallister Model*, Cynthia McCallister presents a revolutionary paradigm for education that is practical, conceptually convincing, and grounded in contemporary behavioral science theory. Beginning with the assertion that equality of educational opportunity depends on access to experiences that are sufficiently appropriate and rich to enable the achievement of diverse human potentials, she provides a comprehensive school design for intervention that demonstrates how to achieve it. Grounded in recent advances in learning science, McCallister asserts three necessary conditions for learning: the need for learners to have access to diverse, rich environmental experiences; the need for them to enjoy fundamental freedom and autonomy to direct their own learning; and access to full and free forms of association. In her model, these conditions provide what is necessary for learners to coordinate their minds with others to develop their identities, personalities, and talents. These conditions are animated in concrete procedures that can be adapted to a wide variety of populations in formal, informal, and remote educational settings. The

procedures take the form of rules that learners comply with in the exercise of their freedom. When they are followed, the rules provide a grammar for the social norms that govern the moral worlds of learners and compel them to flourish. Tested over two decades in her work as a teacher, scholar, and school reformer in more than 20 NYC public schools, the McCallister Method has delivered an innovative and disruptive approach to schooling that has proven successful in finally transforming low-performing industrial schools into 21st-century learning organizations. Online support material includes assessments, records, surveys, and more to be used in school design and classroom settings.

George, 2023-04-01 Archaeologists have a history of being prime agents of change, particularly in advocating for protection and preservation of historical resources. As more social issues intersect with archaeology and historical sites, we see archaeologists and others continuing to advocate for not only historic resources, but for the larger social justice issues that threaten the communities in which these resources reside. Inspired by the idea of revolution and excitement about the ways archaeology is being used in social justice arenas, this volume seeks to visualize archaeology as part of a movement by redefining what archaeology is and does for the greater good.

framework us history regents: Social Studies for the Twenty-First Century Jack Zevin, 2023-03-17 Now in its 5th edition, this popular text offers practical, interesting, exciting ways to teach social studies and a multitude of instructional and professional resources for teachers. Theory, curriculum, methods, and assessment are woven into a comprehensive model for setting objectives; planning lessons, units, and courses; choosing classroom strategies; and constructing tests for some of the field's most popular and enduring programs. The reflective and integrative framework emphasizes building imagination, insight, and critical thinking into everyday classrooms; encourages problem-solving attitudes and behavior; and provokes analysis, reflection, and debate. Throughout the text, all aspects of curriculum and instruction are viewed from a tripartite perspective that divides social studies instruction into didactic (factual), reflective (analytical), and affective (judgmental) components. These three components are seen as supporting one another, building the groundwork for taking stands on issues, past and present. At the center is the author's belief that the heart and soul of social studies instruction, perhaps all teaching, lies in stimulating the production of ideas; looking at knowledge from others' viewpoints; and formulating for oneself a set of goals, values, and beliefs that can be explained and justified in open discussion. This new edition is heavily revised and condensed to promote ease of use. Build Your Own Lesson additions to each chapter encourage improvisation and inquiry-based teaching and learning across subjects. A Companion Website offers additional activities, lessons, and resources for pre-service and practicing social studies teachers.

framework us history regents: History Lessons S.G. Grant, 2014-04-04 In this book, extended case studies of two veteran teachers and their students are combined with the extant research literature to explore current issues of teaching, learning, and testing U.S. history. It is among the first to examine these issues together and in interaction. While the two teachers share several similarities, the teaching practices they construct could not be more different. To explore these differences, the author asks what their teaching practices look like, how their instruction influences their students' understandings of history, and what role statewide exams play in their classroom decisions. History Lessons: Teaching, Learning, and Testing in U.S. High School Classrooms is a major contribution to the emerging body of empirical research in the field of social studies education, chiefly in the subject area of history, which asks how U.S. students make sense of history and how teachers construct their classroom practices. Three case study chapters are paired with three essay review chapters intended to help readers analyze the cases by looking at them in the context of the current research literature. Two concluding chapters extend the cases and

analyses: the first looks at how and why the teachers profiled in this book construct their individual teaching practices, in terms of three distinct but interacting sets of influences--personal, organizational, and policy factors; the second explores the prospects for promoting what the author defines as ambitious teaching and learning. Many policymakers assume that standards-based reforms support the efforts of ambitious teachers, but until we better understand how they and the students in their classes think and act, that assumption is hollow at best. This book is a must have for faculty and students in the field of social studies education, and broadly relevant across the fields of curriculum studies and educational policy.

Learning versus the Common Core explains how standards-based education reform is transforming nearly every aspect of public education by looking closely at the standards, the agenda of people pushing standards-based reform, and how these fit within a global

pattern of education reform. With a nod to the philosophy of John Dewey, Tampio concludes with a vision of what democratic education can look like today—and how people can form rhizomatic alliances across different political and ethical backgrounds to fight the Common Core.
