free access big ideas math: Managing the New Tools in K-12 Teaching and Learning

Jerome A. Schulz, 2018-02-02 Managing the New Tools in K-12 Teaching and Learning: How Technology Can Enable School Improvement is about how to manage technology for learning at the district and school levels. It provides an overview of the components of learning technology; these include student devices, networking, software productivity toolkits, electronic curricula and resources, and data system infrastructure. And, it discusses how we can manage our technology efforts more effectively to help our students attain the benefits of this technology. The book concludes with case studies of how this is being done at pioneering districts. We are now at a tipping point in implementing learning technology on a larger scale. This is happening very quickly! Historically, learning technology was driven by a strategy of "technology integration," where we called on individual teachers to each determine how to use technology in their classes and make changes in their own ways of working. But to successfully implement technology on the scale we need requires top-down as well as bottom-up efforts. Managing the New Tools in K-12 Teaching and Learning focuses on how districts and schools can now use technology to bring about the big improvements in learning we are all striving for.

free access big ideas math: Mindset Mathematics: Visualizing and Investigating Big Ideas, Grade 3 Jo Boaler, Jen Munson, Cathy Williams, 2018-07-12 Engage students in mathematics

using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the third-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.
