free computer science bootcamp: *Alternative and independent* Caren Arbeit, Alexander Bentz, Emily Forrest Cataldi, Herschel Sanders., 2019-02-19 In recent years, nontraditional workforce training programs have proliferated inside and outside of traditional postsecondary institutions. A subset of these programs, bootcamps, advertise high job placement rates and have been hailed by policymakers as key to training skilled workers. However, few formal data exist on the number, types, prices, location, or other descriptive details of program offerings. We fill this void by studying the universe of bootcamp programs offered as of June 30, 2017. In this report, we discuss the attributes of the 1,010 technology-related programs offered in the United States, Canada, and online. We find more diversity among bootcamp providers and programs than would be expected from public discourse. This primarily relates to the mode of delivery (online vs. in person), intensity (part time/full time), cost, and program types. Based on the data we collected, we present a classification structure for bootcamps focused on five distinct program types.

How the world has become much better and why optimism is abundantly justified Why do so many people fear the future? Is their concern justified, or can we look forward to greater wealth and continued improvement in the way we live? Our world seems to be experiencing stagnant economic growth, climatic deterioration, dwindling natural resources, and an unsustainable level of population growth. The world is doomed, they argue, and there are just too many problems to overcome. But is this really the case? In Fewer, Richer, Greener, author Laurence B. Siegel reveals that the world has improved—and will continue to improve—in almost every dimension imaginable. This practical yet lighthearted book makes a convincing case for having gratitude for today's world and optimism about the bountiful world of tomorrow. Life has actually improved tremendously. We live in the safest, most prosperous time in all human history. Whatever the metric—food, health, longevity, education, conflict—it is demonstrably true that right now is the best time to be alive. The recent, dramatic slowing in global population growth continues to spread prosperity from the developed to the developing world. free computer science bootcamp: Code Generation, Analysis Tools, and Testing for Quality Alexandre Peixoto de Queirós, Ricardo, Simões, Alberto, Pinto, Mário Teixeira, 2019-01-11 Despite the advances that have been made in programming, there is still a lack of sufficient methods for quality control. While code standards try to force programmers to follow a specific set of rules, few tools exist that really deal with automatic refactoring of this code, and evaluation of the coverage of these tests is still a challenge. Code Generation, Analysis Tools, and Testing for Quality is an essential reference source that discusses the generation and writing of computer programming and methods of quality control such as analysis and testing. Featuring research on topics such as programming languages, quality assessment, and automated development, this book is ideally designed for academicians, practitioners, computer science teachers, enterprise developers, and researchers seeking coverage on code auditing strategies and methods.

free computer science bootcamp: *No Safe Spaces* Dennis Prager, Mark Joseph, 2019-09-03 YOU HAVE THE RIGHT TO TO REMAIN SILENT Terrifying violence on college campuses across America. Students lashing out at any speaker brave enough to say something they disagree with. Precious snow flakes demanding "Safe Spaces" to protect them from any idea they haven't heard from their liberal professors. In this book and the accompanying movie, Dennis Prager, Mark Joseph, and Adam Carolla expose the attack on free speech and free thought. It began in the universities, but—fair warning—it's coming to your neighborhood and your workplace. "No Safe Spaces is a film

every American should see. I could barely move when it was over. Powerful, emotional, and a call to action for anyone worried about the intellectual fascism happening in this country. A brave, timely, and important film." —MEGYN KELLY, former FOX News anchor and host of Megyn Kelly Today "There is no free speech in America for free thinkers! You can have free speech in America but only if you say what everybody else agrees with. It's not enough to 'live and let live' now. The psycho-elite believe 'silence is violence' and you must actively promote what THEY want no matter how vile or reprehensible it is to you. George Orwell lives! They should've called Orwell 'Nostradamus' because his most frightening prophecies have come to pass, as you will witness in No Safe Spaces!" —MANCOW MULLER, radio phenomenon "An excellent film, the best I've seen on the subject of free speech. I especially like Dennis's line, 'They have to believe we are evil; otherwise they'd have to debate us.' Perfect!" —CAL THOMAS, America's #1 syndicated columnist

free computer science bootcamp: Code Work Héctor Beltrán, 2023-11-14 How Mexican and Latinx hackers apply concepts from coding to their lived experiences In Code Work, Héctor Beltrán examines Mexican and Latinx coders' personal strategies of self-making as they navigate a transnational economy of tech work. Beltrán shows how these hackers apply concepts from the code worlds to their lived experiences, deploying batches, loose coupling, iterative processing (looping), hacking, prototyping, and full-stack development in their daily social interactions—at home, in the workplace, on the dating scene, and in their understanding of the economy, culture, and geopolitics. Merging ethnographic analysis with systems thinking, he draws on his eight years of research in México and the United States—during which he participated in and observed hackathons, hacker schools, and tech entrepreneurship conferences—to unpack the conundrums faced by workers in a tech economy that stretches from villages in rural México to Silicon Valley. Beltrán chronicles the tension between the transformative promise of hacking—the idea that coding will reconfigure the boundaries of race, ethnicity, class, and gender—and the reality of a neoliberal capitalist economy divided and structured by the US/México border. Young hackers, many of whom approach coding in a spirit of playfulness and exploration, are encouraged to appropriate the discourses of flexibility and self-management even as they remain outside formal employment. Beltrán explores the ways that "innovative culture" is seen as central in curing México's social ills, showing that when innovation is linked to technological development, other kinds of development are neglected. Beltrán's highly original, wide-ranging analysis uniquely connects technology studies, the anthropology of capitalism, and Latinx and Latin American studies.

free computer science bootcamp: Proactive and Dynamic Network Defense Cliff Wang, Zhuo Lu, 2019-05-22 This book discusses and summarizes current research issues, identifies challenges, and outlines future directions for proactive and dynamic network defense. This book also presents the latest fundamental research results toward understanding proactive and dynamic network defense by top researchers in related areas. It includes research results that offer formal frameworks to define proactive and dynamic network defense, and develop novel models to analyze and evaluate proactive designs and strategies in computer systems, network systems, cyber-physical systems and wireless networks. A wide variety of scientific techniques have been highlighted to study these problems in the fundamental domain. As the convergence of our physical and digital worlds grows fast pace, protecting information systems from being tampered or unauthorized access is becoming one of the most importance issues. The traditional mechanisms of network defense are built upon a static, passive, and reactive nature, which has insufficient to defend against today's attackers that attempt to persistently analyze, probe, circumvent or fool such mechanisms. It has not yet been fully investigated to address the early stage of “cyber kill chain” when adversaries carry out sophisticated reconnaissance to plan attacks against a defense system. Recently, proactive and dynamic network defense has been proposed as an important alternative towards comprehensive network defense. Two representative types of such defense are moving target defense (MTD) and deception-based techniques. These emerging approaches show great promise to proactively disrupt the cyber-attack kill chain and are increasingly gaining interest within both academia and industry. However, these approaches are still in their preliminary design stage. Despite the promising potential, there areresearch issues yet to be solved regarding the effectiveness, efficiency, costs and usability of such approaches. In addition, it is also necessary to identify future research directions and challenges, which is an essential step towards fully embracing proactive and dynamic network defense. This book will serve as a great introduction for advanced-level computer science and engineering students who would like to start R&D efforts in the field of proactive and dynamic network defense. Researchers and professionals who work in this related field will also find this book useful as a reference.

free computer science bootcamp: *A New U* Ryan Craig, 2018-09-11 Every year, the cost of a four-year degree goes up, and the value goes down. But for many students, there's a better answer. So many things are getting faster and cheaper. Movies stream into your living room, without ticket or concession-stand costs. The world's libraries are at your fingertips instantly, and for free. So why is a college education the only thing that seems immune to change? Colleges and universities operate much as they did 40 years ago, with one major exception: tuition expenses have risen dramatically. What's more, earning a degree takes longer than ever before, with the average time to graduate now over five years. As a result, graduates often struggle with enormous debt burdens. Even worse, they often find that degrees did not prepare them to obtain and succeed at good jobs in growing sectors of the economy. While many learners today would thrive with an efficient and affordable postsecondary education, the slow and pricey road to a bachelor's degree is starkly the opposite. In A New U: Faster + Cheaper Alternatives to College, Ryan Craig documents the early days of a revolution that will transform—or make obsolete—many colleges and universities. Alternative routes to great first jobs that do not involve a bachelor's degree are sprouting up all over the place. Bootcamps, income-share programs, apprenticeships, and staffing models are attractive alternatives to great jobs in numerous growing sectors of the economy: coding, healthcare, sales, digital marketing, finance and accounting, insurance, and data analytics. A New U is the first roadmap to these groundbreaking programs, which will lead to more student choice, better matches with employers, higher return on investment of cost and time, and stronger economic growth.
