**free business tycoon games:** Digital Games and Mathematics Learning Tom Lowrie, Robyn Jorgensen (Zevenbergen), 2015-10-05 Digital games offer enormous potential for learning and engagement in mathematics ideas and processes. This volume offers multidisciplinary perspectives—of educators, cognitive scientists, psychologists and sociologists—on how digital games influence the social activities and mathematical ideas of learners/gamers. Contributing authors identify opportunities for broadening current understandings of how mathematical ideas are fostered (and embedded) within digital game environments. In particular, the volume advocates for new and different ways of thinking about mathematics in our digital age—proposing that these mathematical ideas and numeracy practices are distinct from new literacies or multiliteracies. The authors acknowledge that the promise of digital games has not always been realised/fulfilled. There is emerging, and considerable, evidence to suggest that traditional discipline boundaries restrict opportunities for mathematical learning. Throughout the book, what constitutes mathematics learnings and pedagogy is contested. Multidisciplinary viewpoints are used to describe and understand the potential of digital games for learning mathematics and identify current tensions within the field. Mathematics learning is defined as being about problem solving; engagement in mathematical ideas and processes; and social engagement. The artefact, which is the game, shapes the ways in which the gamers engage with the social activity of gaming. In parallel, the book (as a textual artefact) will be supported by Springer's online platform—allowing for video and digital communication (including links to relevant websites) to be used as supplementary material and

establish a dynamic communication space.

**free business tycoon games: Transmediations** Niklas Salmose, Lars Elleström, 2019-11-22  
This collection offers a multi-faceted exploration of transmediations, the processes of transfer and transformation that occur when communicative acts in one medium are mediated again through another. While previous research has explored these processes from a broader perspective, Salmose and Elleström argue that a better understanding is needed of the extent to which the outcomes of communicative acts are modified when transferred across multimodal media in order to foster a better understanding of communication more generally. Using this imperative as a point of departure, the book details a variety of transmediations, viewed through four different lenses. The first part of the volume looks at narrative transmediations, building on existing work done by Marie-Laure Ryan on transmedia storytelling. The second section focuses on the spatial dynamics involved in media transformation as well as the role of the human body as a perceptive agent and a medium in its own right. The third part investigates new, radical boundaries and media types in transmediality and hence shows its versatility as a method of analyzing complex and contemporary communicative discourses. The fourth and final part explores the challenges involved in transmediating scientific data into the narrative format in the context of environmental issues. Taken together, these sections highlight a range of case studies of transmediations and, in turn, the complexity and variety of the process, informed by the methodologies of the different disciplines to which they belong. This innovative volume will be of particular interest to students and scholars in multimodality, communication, intermediality, semiotics, and adaptation studies.
