The idea of the museum as a ritual site is fairly new and has been applied to the art museums in Europe and the United States so far. This volume expands it by exploring a range of contemporary museums in Europe and Africa. The case studies examine the different ways in which various actors involved in cultural production dramatize and ritualize such sites. It turns out that not only museum specialists, but visitors themselves are engaged in complex performances and experiences that make use of museums in often unexpected ways.

free day at museum of science and industry: The Politics of Display Sharon Macdonald, 2010-10-05 The assumption that museum exhibitions, particularly those concerned with science and technology, are somehow neutral and impartial is today being challenged both in the public arena and in the academy. The Politics of Display brings together studies of contemporary and historical exhibitions and contends that exhibitions are never, and never have been, above politics. Rather, technologies of display and ideas about 'science' and 'objectivity' are mobilized to tell stories of progress, citizenship, racial and national difference. The display of the Enola Gay, the aircraft which dropped the atomic bomb on Hiroshima is a well-known case in point. The Politics of Display charts the changing relationship between displays and their audience and analyzes the consequent shift in styles of representation towards interactive, multimedia and reflexive modes of display. The Politics of Display brings together an array of international scholars in the disciplines of sociology, anthropology and history. Examples are taken from exhibitions of science, technology and industry, anthropology, geology, natural history and medicine, and locations include the United States of America, Australia, the United Kingdom, France, the Netherlands and Spain. This book is an excellent contribution to debates about the politics of public culture. It will be of interest to students of sociology, anthropology, cultural studies, museum studies and science studies.

free day at museum of science and industry: Life on Display Karen A. Rader, Victoria E.M. Cain, 2014-10-03 Rich with archival detail and compelling characters, Life on Display uses the history of biological exhibitions to analyze museums' shifting roles in twentieth-century American science and society. Karen A. Rader and Victoria E. M. Cain chronicle profound changes in these exhibitions—and the institutions that housed them—between 1910 and 1990, ultimately offering new perspectives on the history of museums, science, and science education. Rader and Cain explain why science and natural history museums began to welcome new audiences between the 1900s and the 1920s and chronicle the turmoil that resulted from the introduction of new kinds of biological displays. They describe how these displays of life changed dramatically once again in the 1930s and 1940s, as museums negotiated changing, often conflicting interests of scientists, educators, and visitors. The authors then reveal how museum staffs, facing intense public and scientific scrutiny, experimented with wildly different definitions of life science and life science education from the 1950s through the 1980s. The book concludes with a discussion of the influence that corporate sponsorship and blockbuster economics wielded over science and natural history museums in the century's last decades. A vivid, entertaining study of the ways science and natural history museums

shaped and were shaped by understandings of science and public education in the twentieth-century United States, *Life on Display* will appeal to historians, sociologists, and ethnographers of American science and culture, as well as museum practitioners and general readers.

free day at museum of science and industry: *Exploring Technology and Social Space* John Macgregor Wise, 1997-09-03 Examining the fundamental assumptions that we hold about the role of technology in our lives, *Technology and Social Space* describes the possibilities and limitations of human agency within the new wired world. In a patient and thoughtful style, author J. Macgregor Wise elaborates a critical, philosophical, and epistemological framework from which to better understand our relations to technology and social space. The book argues that most treatments of technology and society arise from a modernist episteme (or set of assumptions) that radically separates humans from technologies, focusing on questions of determination and identity. In an attempt to provide a clearer view of technology and social space, the book explores alternative perspectives centered on notions of agency. Working from within these alternative epistemes, the book turns its attention to the burgeoning technological assemblage of communication and information characterized by the Internet and cyberspace. *Technology and Social Space* draws on the philosophy of Deleuze and Guattari and the actor-network sociology of Bruno Latour, and brings together diverse examples from cyborg films, television, museums, cyberspace, and debates over a New World Information and Communication Order. Ultimately, the book describes the possibilities and limitation of human agency within the new wired world. This groundbreaking volume will be of interest to professionals and academics in popular culture, media studies, mass communication, and sociology.
