**free early childhood development classes online: Identity, Culture and Belonging** Tony Eaude, 2020-02-20 Tony Eaude argues that the foundations of a robust but flexible identity are formed in early childhood and that children live within many intersecting and sometimes conflicting cultures. He considers three meanings of culture, associated with (often implicit) values and beliefs; the arts; and spaces for growth. In exploring how young children's identities, as constructed and constantly changing narratives, are shaped, he discusses controversial, intersecting factors related to power in terms of race/ethnicity, gender, religion, class, physical ability and age. Eaude explores how young children learn, often tacitly, highlighting reciprocity, example, habituation and children's

agency and voice. He emphasises the importance of a sense of belonging, created through trusting relationships, and inclusive environments, with adults drawing on and extending children's cultural capital and 'funds of knowledge.' Eade shows how a holistic education requires a breadth of opportunities across and beyond the school curriculum, and highlights how play, the humanities and the arts enable children to explore how it is to be human, and to become more humane, broadening horizons and helping challenge preconceptions and stereotypes. This radical, inclusive and culturally sensitive vision, for an international audience, challenges many current assumptions about identity, culture, childhood and education.

**free early childhood development classes online:** *Critical Issues in Early Childhood Teacher Education* Ithel Jones, Miranda Lin, 2020-06-01 In recent years there have been significant changes in education across the globe, largely as a result of changing demographics, technological developments, and increased globalization. Relatedly, the changing needs of societies and families, along with new research findings, provide new directions in early childhood education. Consequently, early childhood teachers today are faced with higher and more complex expectations to help ensure that their students achieve their full potential. Such expectations suggest that early childhood teachers should be professionals who are able to draw on a robust knowledge base in making educational decisions. It follows that teacher education programs should develop and implement innovative programs that can potentially enhance the quality of our future teachers. An awareness of pressing issues in the field of early childhood teacher education led the editors to develop this volume. The chapters in these two volumes bring together scholars from across the US and the globe who are interested in improving the quality of early childhood teacher education. The chapters present their experiences, perspectives, and lessons learned as they addressed some of the challenging issues concerning the education and preparation of future early childhood teachers. The various issues and perspectives from different states in the US or countries across the globe provide insights into current issues and dilemmas facing the field. The contributions of these scholars should inform the discourse on early childhood teacher education and help those who work with preservice teachers improve the quality of their work.

**free early childhood development classes online:** *Unschooling* Kerry McDonald, Peter Gray, 2019-05-07 Education has become synonymous with schooling, but it doesn't have to be. As schooling becomes increasingly standardized and test driven, occupying more of childhood than ever before, parents and educators are questioning the role of schooling in society. Many are now exploring and creating alternatives. In a compelling narrative that introduces historical and contemporary research on self-directed education, *Unschooling* also spotlights how a diverse group of individuals and organizations are evolving an old schooling model of education. These innovators challenge the myth that children need to be taught in order to learn. They are parents who saw firsthand how schooling can dull children's natural curiosity and exuberance and others who decided early on to enable their children to learn without school. Educators who left public school classrooms discuss launching self-directed learning centers to allow young people's innate learning instincts to flourish, and entrepreneurs explore their disillusionment with the teach-and-test approach of traditional schooling.
