**i ready math kindergarten:** Early Childhood Education in the United States Dinah Volk, Liz Brooker, Pamela Oberhuemer, Rod Parker-Rees, 2020-04-24 Early Childhood Education in the United States is rife with contradictions, critique and innovation. It is a time when a status quo – characterized by systemic, historic discrimination; teacher de-professionalization; 'teaching to the test'; and attacks on funding – is challenged by new technologies, new literacies and transformative and critical perspectives and practices that defy assumptions and biases to create cutting-edge, diverse instantiations of Early Childhood Education for children, families, and teachers. This volume, based on a special issue of the Early Years journal written in 2016 before the new administration announced its policies, aims to generate conversations about developments in Early Childhood Education, situated within classist/racist/linguicist and neoliberal contexts, and to analyze critically where we are, where we might go and what we might do. It is also an opportunity to share counter-narratives to the dominant narratives promulgated by many, convinced that narrow, destructive norms of appropriate practice, standards, and accountability, as well as the curtailed achievement of children of Color, those from low income communities, and emergent bilinguals are 'common sense'. These counter-narratives – some about transformational projects that have generated innovative perspectives and practices, and some detailing critical analyses and projects that go beyond to explore issues of power – contest education that disprivileges some children and families while advocating education that is child- and family-centered, culturally relevant and sustaining, equitable and democratic. Our hope is that this work creates a 'space of dialogue and human action' needed even more urgently today. This book was originally published as a special issue of the Early Years journal.

**i ready math kindergarten:** On the Rocketship Richard Whitmire, 2014-05-15 The face of American education is evolving—and the roadmap is clear On the Rocketship: How Top Charter Schools are Pushing the Envelope examines the rise and expansion of leading charter school network Rocketship, revealing the secret sauce that makes a successful program. A strong narrative

with a timely message, the book explores how Rocketship started and the difficulties encountered as it expands. Designing schools for children who have been failed by traditional schools is extremely challenging work. Setbacks are inevitable. Later in the book the narrative shifts to the national picture, exploring how high performing charter schools are changing the education landscape in cities such as Denver, Memphis, and Houston. The book emerges just as charter schools are running into stiff political opposition in New York City and elsewhere. Even in San Jose, Rocketship's home base, the pushback against charter schools is gaining speed. On the Rocketship becomes a valuable resource for explaining what's at stake in this battle. Lose these schools, in New York, San Jose and other cities, and low-income and minority students lose their best shot at a quality education. Written by a veteran journalist who followed Rocketship through a school year, the book explores some of the factors that make Rocketship and other charters successful, including the blended learning that was pioneered at charter schools, especially Rocketship. Many schools around the country are looking to Rocketship as a model for implementing blended learning. The interplay between charter schools and blended learning is setting a change in motion, and the American education system is ready to evolve. On the Rocketship details this phenomenon, providing insights for educators across the nation.
