i promise school math test: *Improving Research-Based Knowledge of College Promise Programs* Laura W. Perna, Edward J. Smith, 2020-03-20 Also known as "free tuition" and "free college" programs, college promise programs are an emerging approach for increasing higher education attainment of people in particular places. To maximize the effectiveness of their efforts and investments, program leaders and policymakers need research-based evidence to inform program design, implementation, and evaluation. With the goal of addressing this knowledge need, this volume presents a collection of research studies that examine several categories and variations of college promise programs. These theoretically grounded empirical investigations use varied data sources and analytic techniques to examine the effects of college promise programs that have different design features and operate in different places. Individually and collectively, the results of these studies have implications for the design and implementation of promise programs if these programs are to create meaningful improvements in attainment for people from underserved groups. The authors' efforts also provide a useful foundation for the next generation of college promise research.

i promise school math test: Full Circle on the Mountain Linda Gardner, 2002-05-01 Do you believe a personal destiny exists for each of us? If it were possible to catch a glimpse of that destiny, would you have the courage, faith and strength of heart to follow it? What would be the cost, and what would have to be laid on the altar of sacrifice? FULL CIRCLE on the MOUNTAIN answers those questions with a powerful and insightful journey into one woman's personal destiny. Claudette Elizabeth McAllister grew up a young woman, in rural South Carolina in the fifties, the daughter of a farmer and his bakery shop attendant wife. She was an ordinary girl, with ordinary dreams of going to college and pursuing a career in accounting. Destiny, however, used those dreams to choose another path for her. A presumed chance meeting with handsome, educated, and wealthy, Johnny Richardson would change her life and set her on a course with destiny which would not rest until she came full circle with it some twenty years later. In the early sixties, fate, in disguise as a life-threatening experience drives her back to her hometown. There she must face the reality of a son born out of wedlock, the tragic accident that killed her best friend and the realization that her life was somehow being orchestrated by forces beyond her control. Forces that continually required her to sacrifice and endure what seemed impossible for the human spirit. FULL CIRCLE on the MOUNTAIN is a journey along her path of people, places and events which would not only direct and shape her destiny, but weave its threads deeply into an entire family, unaware they too were a part

of the great tapestry of this simple woman. A rare and powerful combination of: entertainment, insight, wisdom and truth. Henri Forget, free-lance editor.

i promise school math test: *Sky Songs* Jennifer Sinor, 2020-10 *Sky Songs* is a collection of essays that takes inspiration from the ancient seabed in which Jennifer Sinor lives, an elemental landscape that reminds her that our lives are shaped by all that has passed through. Beginning with the conception of her first son, which coincided with the tragic death of her uncle on an Alaskan river, and ending a decade later in the Himalayan home of the Dalai Lama, Sinor offers a lyric exploration of language, love, and the promise inherent in the stories we tell: to remember. In these essays, Sinor takes us through the mountains, deserts, and rivers of the West and along with her on her travels to India. Whether rooted in the dailiness of raising children or practicing yoga, Sinor searches for the places where grace resides. The essays often weave several narrative threads together in the search for relationship and connection. A mother, writer, teacher, and yoga instructor, Sinor ultimately tackles the most difficult question: how to live in a broken world filled with both suffering and grace.

i promise school math test: Promise and Dilemma Eugene Y. Lowe, Jr., 2021-02-09 Issues of diversity and affirmative action have turned elite higher education in the United States into contested terrain. Rights revolutions in the country have raised hopes that have proved difficult to fulfill. Most particularly, expectations about access and opportunity--redressing the unfairness of the past--have collided with widely held beliefs: that educational institutions should treat each person fairly as an individual and should promote high academic standards. *Promise and Dilemma* gathers the reflections of a group of leading educators on whether and how objectives of diversity, equity, and excellence can be simultaneously pursued. Empirical in orientation, these essays focus on constructive proposals and on the role of social and political consensus. Furthermore, they contrast what we believe we know with what empirical data and institutional experience can teach us. Eugene Lowe's substantive introduction reviews the history of the practice of affirmative action in colleges and universities. The other essays are by L. Scott Miller of The College Board; Mamphela Ramphele, vice chancellor of the University of Cape Town; Neil J. Smelser of the Center for Advanced Study in the Behavioral Sciences, Stanford; and Claude M. Steele of Stanford University. Also included are commentaries by Randall Kennedy, Harvard Law School; Richard J. Light, John F. Kennedy School of Government, Harvard University; Chang-Lin Tien, the University of California, Berkeley; and Philip Uri Treisman, the University of Texas.

i promise school math test: The Best Book On Elite Admissions (Former Stanford Admissions Officer's Plan For Select College Admissions) Erinn Andrews, 2011-11-17 ABOUT THE BOOK Applying to college is likely the most stressful and important moment in a teenager's academic life. Pressure from friends, family, teachers, and oneself add up to make this an overwhelming process to go through, especially for students applying to the nation's most selective schools. One major reason for this stress is the uncertainty of the application process. Often, the students who apply to top schools are used to feeling in control of their lives and planning their future, but because there are no sure admittances in elite admissions, the feeling of helplessness can be overwhelming. There are a number of resources available to students who wish to maximize their chances of admission; however, I, as a former admission officer at a selective university, feel that many are misleading. In some cases, the advice given is very specific to one school which isn't useful for the majority of students or it's too vague. And in some other cases, students try to compare their statistics with the

statistics of other seemingly similar students to gauge their chances of admission, perhaps the worst resource of all. MEET THE AUTHOR Erinn Andrews is the former Assistant Director of Undergraduate Admissions at Stanford University. She read and evaluated thousands of applications from the US, as well as more than 70 countries around the world, and through that, she has developed a unique perspective on what it takes to get into the nation's elite colleges. She completed an M.A. in Education at Stanford University's School of Education in the Policy, Organization, and Leadership Studies Program. She also earned a B.A. in History with Honors at Stanford. She now works with students to help them uncover their intellectual and personal interests and present the best version of themselves in the elite admissions process. EXCERPT FROM THE BOOK The purpose of the application in selective admissions is to understand the context from which the applicant is coming. In order to decide which students to admit when admit rates are so low (Once the context has been established, then the admission officer tries to find out if the student has taken advantage of the opportunities available to him and has either: a.) made a lasting impact in his community in some way, or b.) has the potential to make a lasting impact in his future community (college and beyond). Despite popular belief, every application is actually read in its entirety by an admission officer in the selective admissions process.
