Following the diagnostic phase, i-Ready generates a personalized learning plan that targets specific skill gaps and builds upon existing knowledge. This adaptive approach ensures that students are neither bored with content that is too easy nor overwhelmed by material that is too difficult. i-Ready personalized instruction leverages technology to deliver lessons that continuously adjust in difficulty and content relevance as students advance, providing a dynamic and engaging learning experience.

Adaptive Learning Technology

The core of i-Ready personalized instruction is its adaptive learning technology, which uses complex algorithms to analyze student responses and adjust subsequent instruction accordingly. This technology personalizes the pace, difficulty, and sequence of lessons to match each learner's evolving needs. It enables real-time feedback and targeted interventions, ensuring that students receive support exactly when they need it. The adaptive system also helps identify misconceptions and learning gaps early, allowing educators to address issues promptly and effectively.

i ready personalized instruction: *Digital Personalization in Early Childhood* Natalia Kucirkova, 2017-09-07 Digital personalization is an emerging interdisciplinary research field, with application to a variety of areas including design, education and publication industry. This book focuses on children's education and literacy resources, which have undergone important changes with the 'personalization revolution' in the early 21st century. The author develops original insights from educational research and her own studies concerned with digital and non-digital personalization, to discuss in a clear and critical way the thinking, research issues and practical implications of this new field. She scrutinises the character of technology-based personalized education to substantiate the claim that the current models of personalized education tend to be technology- and business-driven, with little pedagogical understanding of the social value of personalization. Research involving touchscreens, personalized books and 2-8-year olds is interrogated for its impact on children's development of language, creativity, identity, as well as family dynamics and classroom dialogue. The literature available on digital and non-digital personalization is discussed in relation to five key themes of personalized education, the so-called 5As: autonomy, authorship, aesthetics, attachment and authenticity. It is argued that the 5As need to be anchored in humanist principles for a sustainable pedagogy and practice. Based on the insights from research with typically and atypically developing children, Kucirkova proposes personalised pluralisation, as a pedagogical framework of personalized education for the future. The book aims to help scholars and professionals understand the connections between personalization and literacy, personalization and education, and personalization and wider socio-moral issues.
