icon of the seas blueprint: *The Sea Can Wash Away All Evils* Kimberley Christine Patton, 2007 Kimberley Patton examines the environmental crises facing the world's oceans from the perspective of religious history. Much as the ancient Greeks believed, and Euripides wrote, that the sea can wash away all evils, a wide range of cultures have sacralized the sea, trusting in its power to wash away what is dangerous, dirty, and morally contaminating. The sea makes life on land possible by keeping it pure. Patton sets out to learn whether the treatment of the world's oceans by industrialized nations arises from the same faith in their infinite and regenerative qualities. Indeed, the sea's natural characteristics, such as its vast size and depth, chronic motion and chaos, seeming biotic inexhaustibility, and unique composition of powerful purifiers-salt and water-support a view of the sea as a no place capable of swallowing limitless amounts of waste. And despite evidence to the contrary, the idea that the oceans could be harmed by wasteful and reckless practices has been slow to take hold. Patton believes that environmental scientists and ecological advocates ignore this relationship at great cost. She bases her argument on three influential stories: Euripides' tragedy *Iphigenia in Tauris*; an Inuit myth about the wild and angry sea spirit Sedna who lives on the ocean floor with hair dirtied by human transgression; and a disturbing medieval Hindu tale of a lethal underwater mare. She also studies narratives in which the sea spits back its contents-sins, corpses, evidence of guilt long sequestered-suggesting that there are limits to the ocean's vast, salty heart. In these stories, the sea is either an agent of destruction or a giver of life, yet it is also treated as a passive receptacle. Combining a history of this ambivalence toward the world's oceans with a serious scientific analysis of modern marine pollution, Patton writes a compelling, cross-disciplinary study that couldn't be more urgent or timely.

icon of the seas blueprint: *Weaponizing Maps* Joe Bryan, Denis Wood, 2015-03-11 Maps play an indispensable role in indigenous peoples' efforts to secure land rights in the Americas and beyond. Yet indigenous peoples did not invent participatory mapping techniques on their own; they appropriated them from techniques developed for colonial rule and counterinsurgency campaigns, and refined by anthropologists and geographers. Through a series of historical and contemporary examples from Nicaragua, Canada, and Mexico, this book explores the tension between military applications of participatory mapping and its use for political mobilization and advocacy. The authors analyze the emergence of indigenous territories as spaces defined by a collective way of life--and as a particular kind of battleground.

icon of the seas blueprint: *In Search of Captain Cook* Dan O'Sullivan, 2008-03-30 Captain James Cook was the greatest explorer of his age, perhaps of any age. He was a leader of men, a master voyager who journeyed to unknown places, a seeker of knowledge who commanded three demanding scientific expeditions. He and his crews had encounters with peoples of the South Seas which could lead to mutual respect and trade, but also to misunderstanding and violence. Even before he died his exploits were widely admired. But his death at the hands of Hawaiians turned him

into a legendary figure, a hero of the Enlightenment, who was said to have brought civilization to the Pacific while giving up his own life in the process. Yet despite everything that is known about Cook's life and many adventures, the man himself remains shrouded in mystery. With this book, Dan O'Sullivan seeks to put this right and casts vivid light on Cook's character, teasing out his personality from the pages of his own journals. As well as an original and illuminating re-examination of Cook's complex character, this is also a vivid introduction to his life and times which is essential reading for anyone with an interest in this incomparable sea-captain.

Among his recent exhibition designs is The Renaissance from Brunelleschi to Michelangelo, presenting architectural models and shown in Venice, Paris and Berlin.

icon of the seas blueprint: City of Echoes Jessica Wörnberg, 2023-08-31 In Rome the echoes of the past resound clearly in its palaces and monuments, and in the remains of the ancient imperial city. But another presence has dominated Rome for 2,000 years -the pope, whose actions and influence echo down the ages. In this epic tale, historian Jessica Wörnberg tells, for the first time, the story of Rome through the lens of its popes, illuminating how these remarkable (and unremarkable) men have transformed lives and played a crucial role in deciding the fate of the city. Emerging as the anonymous leader of a marginal cult in the humblest quarters of the city, less than 300 years later the pope sat enthroned in a gilt basilica, endorsed by the emperor himself. Eventually, the Roman pontiff would supplant even the emperors, becoming the de facto ruler of Rome and pre-eminent leader of the Christian world. Shifting elegantly between the panoramic and the personal, the spiritual and the profane, this is a fresh and often surprising take on a city, a people and an institution that is at once familiar and elusive.
