Key Technical Areas

Questions often focus on skills such as managing ventilators, interpreting arterial blood gases (ABGs), administering vasoactive medications, and understanding hemodynamic monitoring. Knowledge of infection control and emergency procedures is also commonly tested.

icu nursing interview questions: Health Promotion in Health Care - Vital Theories and Research Gørill Haugan, Monica Eriksson, 2021-03-11 This open access textbook represents a vital contribution to global health education, offering insights into health promotion as part of patient care for bachelor's and master's students in health care (nurses, occupational therapists, physiotherapists, radiotherapists, social care workers etc.) as well as health care professionals, and

providing an overview of the field of health science and health promotion for PhD students and researchers. Written by leading experts from seven countries in Europe, America, Africa and Asia, it first discusses the theory of health promotion and vital concepts. It then presents updated evidence-based health promotion approaches in different populations (people with chronic diseases, cancer, heart failure, dementia, mental disorders, long-term ICU patients, elderly individuals, families with newborn babies, palliative care patients) and examines different health promotion approaches integrated into primary care services. This edited scientific anthology provides much-needed knowledge, translating research into guidelines for practice. Today's medical approaches are highly developed; however, patients are human beings with a wholeness of body-mind-spirit. As such, providing high-quality and effective health care requires a holistic physical-psychological-social-spiritual model of health care is required. A great number of patients, both in hospitals and in primary health care, suffer from the lack of a holistic oriented health approach: Their condition is treated, but they feel scared, helpless and lonely. Health promotion focuses on improving people's health in spite of illnesses. Accordingly, health care that supports/promotes patients' health by identifying their health resources will result in better patient outcomes: shorter hospital stays, less re-hospitalization, being better able to cope at home and improved well-being, which in turn lead to lower health-care costs. This scientific anthology is the first of its kind, in that it connects health promotion with the salutogenic theory of health throughout the chapters. The authors here expand the understanding of health promotion beyond health protection and disease prevention. The book focuses on describing and explaining salutogenesis as an umbrella concept, not only as the key concept of sense of coherence.

icu nursing interview questions: Intensive Care Robert Zussman, 1992 From this superb fieldwork--observing medical staff on their rounds; interviewing staff, patients, and families; and systematically reviewing hospital records--Zussman reveals the existence of deep conflicts of opinion on how to allocate treatment and resources. He shows that these perspectives depart from the formal principles of medical ethics. He argues that courts and hospital administrators, with their new insistence on taking the rights of patients seriously, have reshaped the way life and death decisions are made. At the same time, Zussman examines doctors' frequent resistance to the precepts of medical ethics: doctors, he shows, often override patients' wishes, justifying their decisions in the name of the patients' best interests while maintaining control over the decision-making process.
