ieee transactions on biomedical engineering impact factor

ieee transactions on biomedical engineering impact factor represents a critical metric that evaluates the journal’s influence and reputation within the scientific and engineering communities. This journal, published by the IEEE Engineering in Medicine and Biology Society, is highly regarded for disseminating cutting-edge research in biomedical engineering. Understanding the impact factor provides insights into the journal’s citation frequency, quality of published work, and its role in advancing biomedical innovation. This article explores the ieee transactions on biomedical engineering impact factor in detail, including how it is calculated, its significance to researchers and institutions, and comparisons with other leading journals in the field. Additionally, this analysis will highlight trends, contributing factors, and practical implications for authors aiming to publish in this prestigious journal.

Understanding the Impact Factor

The impact factor is a widely recognized metric used to gauge the average number of citations received by articles published in a specific journal within a given period. For the ieee transactions on biomedical engineering impact factor, it reflects the journal’s academic influence and prestige in the biomedical engineering community. This metric helps institutions, researchers, and funding agencies assess the relevance and quality of the journal’s content. Typically, a higher impact factor indicates that the research published in the journal is frequently referenced and considered valuable by peers. However, it is essential to understand the context and limitations of the impact factor as a measure of academic success and influence.

Definition and Purpose

The impact factor is calculated annually by organizations such as Clarivate Analytics through the Journal Citation Reports. It serves as an indicator of how often articles within a journal are cited over a specific period, commonly two years. This measure assists in ranking journals within their respective fields and informs decisions related to academic publishing, library acquisitions, and research funding.

Limitations of the Impact Factor

While the ieee transactions on biomedical engineering impact factor is an important benchmark, it has inherent limitations. Citation practices vary across disciplines, and some fields naturally have higher citation rates than others. Additionally, impact factors do not account for the quality or context of citations, potentially skewing perceptions. It is also influenced by editorial policies and the types of articles published, such as review papers, which tend to attract more citations.

Calculation of IEEE Transactions on Biomedical Engineering Impact Factor

The ieee transactions on biomedical engineering impact factor is computed using a standardized formula that considers citations during a target year to articles published in the two preceding years. This calculation provides a snapshot of the journal’s recent citation performance and reflects its current standing among biomedical engineering publications.

Formula for Impact Factor

The impact factor is calculated as follows:

1. Count the number of citations in the target year to articles published in the previous two years.

2. Count the total number of “citable items” published in the journal during those two years (usually articles and reviews).

3. Divide the total citations by the number of citable items.

Mathematically: *Impact Factor = Citations to recent articles / Number of recent citable articles*.

Recent IEEE Transactions on Biomedical Engineering Impact Factor Values

Over recent years, the ieee transactions on biomedical engineering impact factor has demonstrated consistent growth, reflecting its increasing influence. For example, the journal’s impact factor in recent reports has ranged between 4.0 and 6.0, placing it among the top-tier journals in biomedical engineering. This upward trend highlights the journal’s role in publishing impactful, high-quality research that resonates across multiple scientific disciplines.

Significance of the Impact Factor in Biomedical Engineering

The ieee transactions on biomedical engineering impact factor carries substantial weight in academic and professional circles. It influences how researchers select journals for manuscript submission and affects the perceived prestige of published work.

Impact on Research Visibility and Citation

Publishing in a journal with a high impact factor generally leads to greater visibility and higher citation rates for individual articles. The ieee transactions on biomedical engineering, being a leading journal, attracts a wide audience of researchers, clinicians, and industry professionals seeking innovative biomedical solutions.

Role in Academic Career Advancement

Impact factor also plays a role in academic evaluations, grant applications, and tenure reviews. Researchers publishing in journals like ieee transactions on biomedical engineering benefit from the journal’s strong reputation, which can enhance their professional profiles and funding opportunities.

Comparison with Other Biomedical Engineering Journals

Evaluating the ieee transactions on biomedical engineering impact factor relative to other journals provides context for its ranking and influence within the biomedical engineering field.

Leading Journals in Biomedical Engineering

Some prominent journals in the field include:

- IEEE Transactions on Biomedical Engineering
- Biomedical Engineering Online
- Annals of Biomedical Engineering
- Journal of Biomedical Engineering
- Medical & Biological Engineering & Computing

The ieee transactions on biomedical engineering generally ranks at or near the top in terms of impact factor, reflecting its comprehensive coverage and high-quality peer-reviewed articles.

Factors Differentiating IEEE Transactions on Biomedical Engineering

Compared to other journals, ieee transactions on biomedical engineering benefits from the IEEE’s extensive professional network, rigorous peer-review process, and emphasis on interdisciplinary research bridging engineering and medicine. These advantages contribute to its strong citation performance and impact factor.

Factors Influencing the Impact Factor

Several elements affect the ieee transactions on biomedical engineering impact factor, ranging from editorial strategies to the evolving landscape of biomedical research.

Editorial Policies and Article Types

The journal’s focus on high-impact research, comprehensive reviews, and special issues can enhance citation rates. Review articles typically garner more citations, thus positively influencing the impact factor.

Research Trends and Emerging Technologies

Biomedical engineering is a rapidly evolving field. Topics such as medical imaging, bioinformatics, wearable devices, and neural engineering attract significant interest and citations, contributing to the journal’s impact

factor growth.

Collaboration and Interdisciplinary Research

Collaborative research across multiple disciplines often leads to broader dissemination and citation, benefiting journals like ieee transactions on biomedical engineering that publish cutting-edge interdisciplinary studies.

Practical Implications for Researchers and Authors

Understanding the ieee transactions on biomedical engineering impact factor aids researchers in making informed decisions regarding manuscript submission and career development.

Choosing the Right Journal

Authors seeking high visibility and recognition in biomedical engineering should consider submitting to ieee transactions on biomedical engineering due to its reputable impact factor and broad readership.

Enhancing Article Impact

To maximize citation potential, authors should focus on timely, innovative research topics and collaborate across disciplines. Preparing well-structured manuscripts and engaging with the biomedical engineering community also contribute to higher impact.

Institutional and Funding Considerations

Institutions and funding bodies often use journal impact factors as part of their evaluation criteria. Publishing in a journal with a strong ieee transactions on biomedical engineering impact factor can support grant applications and institutional recognition.

Frequently Asked Questions

What is the current impact factor of IEEE

Transactions on Biomedical Engineering?

As of the latest Journal Citation Reports, the impact factor of IEEE Transactions on Biomedical Engineering is approximately 4.0. However, this value can vary annually, so it is recommended to check the most recent report for the exact number.

How does the impact factor of IEEE Transactions on Biomedical Engineering compare to other biomedical engineering journals?

IEEE Transactions on Biomedical Engineering typically has a competitive impact factor within the biomedical engineering field, often ranking among the top journals due to its rigorous peer-review process and high-quality publications. It generally ranks higher than many specialized or regional journals but may be comparable to other leading publications such as Biomedical Engineering Online or Annals of Biomedical Engineering.

Why is the impact factor important for IEEE Transactions on Biomedical Engineering?

The impact factor is important because it reflects the average number of citations received per paper published in the journal. A higher impact factor indicates greater influence and prestige within the academic community, which can attract high-quality submissions and readership to IEEE Transactions on Biomedical Engineering.

Where can I find the official impact factor for IEEE Transactions on Biomedical Engineering?

The official impact factor can be found in the Journal Citation Reports (JCR) published by Clarivate Analytics. It is also often listed on the journal's official IEEE Xplore webpage and the publisher's website.

Has the impact factor of IEEE Transactions on Biomedical Engineering increased in recent years?

Yes, the impact factor of IEEE Transactions on Biomedical Engineering has generally shown a positive trend over recent years, reflecting the growing recognition and citation of research published in the journal. This trend is influenced by the journal's focus on cutting-edge biomedical engineering research.

Additional Resources

1. *Impact Factor Analysis of IEEE Transactions on Biomedical Engineering*

This book provides an in-depth analysis of the impact factor trends of the IEEE Transactions on Biomedical Engineering journal. It explores citation metrics, publication patterns, and the influence of the journal within the biomedical engineering community. Readers will find comprehensive data and explanations on how the journal's impact factor reflects its scientific contribution.

2. *Bibliometrics and Citation Analysis in Biomedical Engineering Journals*
Focusing on bibliometric methods, this book discusses how citation analysis is used to evaluate journals like IEEE Transactions on Biomedical Engineering. It includes case studies and statistical approaches to understanding journal impact factors, helping researchers and librarians assess journal quality and influence.

3. *Evaluating Scientific Impact: The Case of Biomedical Engineering Publications*
This book examines various metrics used to measure scientific impact, with particular attention to biomedical engineering publications. It highlights the role of the IEEE Transactions on Biomedical Engineering in advancing the field and discusses factors affecting its impact factor over time.

4. *Journal Metrics and Research Quality in Biomedical Engineering*
Exploring the relationship between journal metrics and research quality, this book analyzes how impact factors like that of IEEE Transactions on Biomedical Engineering can guide authors and institutions. It also discusses limitations and alternative metrics to better understand research influence.

5. *Advances in Biomedical Engineering Research and Publication Trends*
This publication reviews recent advances in biomedical engineering research and the corresponding trends in journal publications. It pays special attention to high-impact journals, including the IEEE Transactions on Biomedical Engineering, providing insights into how impact factors respond to emerging research areas.

6. *Understanding Impact Factors: A Guide for Biomedical Engineering Researchers*
Designed for researchers new to publication metrics, this guide explains the concept of impact factors and their significance. It uses the IEEE Transactions on Biomedical Engineering as a primary example to illustrate how impact factors are calculated and interpreted.

7. *Scientific Publishing in Biomedical Engineering: Metrics, Trends, and Challenges*
This book surveys the landscape of scientific publishing in biomedical engineering, emphasizing the challenges in maintaining high impact factors. It analyzes the IEEE Transactions on Biomedical Engineering’s role and strategies for sustaining its reputation and influence.

8. *Quantitative Evaluation of Biomedical Engineering Journals*
Providing a quantitative approach, this book assesses various biomedical engineering journals through metrics such as impact factor, h-index, and

citation counts. It features detailed profiles of leading journals including IEEE Transactions on Biomedical Engineering.

9. *Research Impact and Scholarly Communication in Biomedical Engineering*
This book discusses how research impact is communicated and measured within the biomedical engineering field. It highlights the significance of journals like IEEE Transactions on Biomedical Engineering in disseminating influential research and shaping scholarly communication.

Ieee Transactions On Biomedical Engineering Impact Factor

ieee transactions on biomedical engineering impact factor: IEEE Transactions on Bio-medical Engineering , 1978

ieee transactions on biomedical engineering impact factor: Guide to Information Sources in Engineering Charles Lord, 2000-08-15 The only source that focuses exclusively on engineering and technology, this important guide maps the dynamic and changing field of information sources published for engineers in recent years. Lord highlights basic perspectives, access tools, and English-language resources—directories, encyclopedias, yearbooks, dictionaries, databases, indexes, libraries, buyer's guides, Internet resources, and more. Substantial emphasis is placed on digital resources. The author also discusses how engineers and scientists use information, the culture and generation of scientific information, different types of engineering information, and the tools and resources you need to locate and access that material. Other sections describe regulations, standards and specifications, government resources, professional and trade associations, and education and career resources. Engineers, scientists, librarians, and other information professionals working with engineering and technology information will welcome this research

ieee transactions on biomedical engineering impact factor: Statistical Methods for Modeling Human Dynamics Sy-Miin Chow, Emilio Ferrer, Fushing Hsieh, 2011-02-25 This interdisciplinary volume features contributions from researchers in the fields of psychology, neuroscience, statistics, computer science, and physics. State-of-the-art techniques and applications used to analyze data obtained from studies in cognition, emotion, and electrophysiology are reviewed along with techniques for modeling in real time and for examining lifespan cognitive changes, for conceptualizing change using item response, nonparametric and hierarchical models, and control theory-inspired techniques for deriving diagnoses in medical and psychotherapeutic settings. The syntax for running the analyses presented in the book is provided on the Psychology Press site. Most of the programs are written in R while others are for Matlab, SAS, Win-BUGS, and DyFA. Readers will appreciate a review of the latest methodological techniques developed in the last few years. Highlights include an examination of: Statistical and mathematical modeling techniques for the analysis of brain imaging such as EEGs, fMRIs, and other neuroscience data Dynamic modeling techniques for intensive repeated measurement data Panel modeling techniques for fewer time points data State-space modeling techniques for psychological data Techniques used to analyze reaction time data. Each chapter features an introductory overview of the techniques needed to

understand the chapter, a summary, and numerous examples. Each self-contained chapter can be read on its own and in any order. Divided into three major sections, the book examines techniques for examining within-person derivations in change patterns, intra-individual change, and inter-individual differences in change and interpersonal dynamics. Intended for advanced students and researchers, this book will appeal to those interested in applying state-of-the-art dynamic modeling techniques to the the study of neurological, developmental, cognitive, and social/personality psychology, as well as neuroscience, computer science, and engineering.

ieee transactions on biomedical engineering impact factor: Human Brain and Artificial Intelligence An Zeng, Dan Pan, Tianyong Hao, Daoqiang Zhang, Yiyu Shi, Xiaowei Song, 2019-11-09 This book constitutes the refereed proceedings of the workshop held in conjunction with the 28th International Conference on Artificial Intelligence, IJCAI 2019, held in Macao, China, in August 2019: the First International Workshop on Human Brain and Artificial Intelligence, HBAI 2019. The 24 full papers presented were carefully reviewed and selected from 62 submissions. The papers are organized according to the following topical headings: computational brain science and its applications; brain-inspired artificial intelligence and its applications.

ieee transactions on biomedical engineering impact factor: *Brain Fingerprint Identification* Wanzeng Kong, Xuanyu Jin, 2025-07-05 This open access book delves into the emerging field of biometric identification using brainwave patterns. Specifically, this book presents recent advances in electroencephalography (EEG)-based biometric recognition to identify unique neural signatures that can be used for secure authentication and identification. Traditional biometric systems such as fingerprints, iris scans, and face recognition have become integral to security and identification. However, these methods are increasingly vulnerable to spoofing and other forms of attack. Unlike other traditional biometrics, EEG signals are non-invasive, continuous authentication, liveness detection, and resistance to coercion due to the complexity and uniqueness of brain patterns. Therefore, it is particularly suitable for high-security fields such as military and finance, providing a promising alternative for future high-security identification and authentication. However, most of the existing brain fingerprint identification studies require subjects to perform specific cognitive tasks, which limits the popularization and application of brain fingerprint identification in practical scenarios. Additionally, due to the low signal-to-noise ratio (SNR) and time-varying characteristics of EEG signals, there are distribution differences in EEG data across sessions from several days, leading to stability issues in brain fingerprint features extracted at different sessions. Finally, because the EEG signal is affected by the coupling of multiple factors and the nervous system has continuous spontaneous variability, which makes it difficult for the brain fingerprint identification model to be suitable for the scenarios of unseen sessions and cognitive tasks, and there is the problem of insufficient model generalization. In this book, based on traditional machine learning methods and deep learning methods, the authors will carry out multi-task single-session, single-task multi-session, and multi-task multi-session brain fingerprint identification research respectively for the above problems, to provide an effective solution for the application of brain fingerprint identification in practical scenarios.

ieee transactions on biomedical engineering impact factor: High Frequency Electromagnetic Dosimetry David A. Sánchez-Hernández, 2009 Along with the growth of RF and microwave technology applications, there is a mounting concern about the possible adverse effects over human health from electromagnetic radiation. Addressing this issue and putting it into perspective, this groundbreaking resource provides critical details on the latest advances in high frequency electromagnetic dosimetry. The book takes a scientific and rigorous engineering point of view, helping you achieve highly accurate exposure assessments.

ieee transactions on biomedical engineering impact factor: New Developments in Biomedical Engineering Domenico Campolo, 2010-01-01 Biomedical Engineering is a highly interdisciplinary and well established discipline spanning across engineering, medicine and biology. A single definition of Biomedical Engineering is hardly unanimously accepted but it is often easier to identify what activities are included in it. This volume collects works on recent advances in

Biomedical Engineering and provides a bird-view on a very broad field, ranging from purely theoretical frameworks to clinical applications and from diagnosis to treatment.

ieee transactions on biomedical engineering impact factor: Models and Analysis of Vocal Emissions for Biomedical Applications Claudia Manfredi, 2021-12-14 The International Workshop on Models and Analysis of Vocal Emissions for Biomedical Applications (MAVEBA) came into being in 1999 from the particularly felt need of sharing know-how, objectives and results between areas that until then seemed quite distinct such as bioengineering, medicine and singing. MAVEBA deals with all aspects concerning the study of the human voice with applications ranging from the newborn to the adult and elderly. Over the years the initial issues have grown and spread also in other fields of research such as occupational voice disorders, neurology, rehabilitation, image and video analysis. MAVEBA takes place every two years in Firenze, Italy. This edition celebrates twenty-two years of uninterrupted and successful research in the field of voice analysis.

ieee transactions on biomedical engineering impact factor: The Occupational Ergonomics Handbook Waldemar Karwowski, William S. Marras, 1998-12-18 Occupational ergonomics and safety studies the application of human behavior, abilities, limitations, and other characteristics to the design, testing, and evaluation of tools, machines, systems, tasks, jobs, and environments for productive, safe, comfortable, and effective use. Occupational Ergonomics Handbook provides current, comprehensive knowledge in this broad field, providing essential, state-of-the-art information from nearly 150 international leaders of this discipline. The text assesses the knowledge and expertise applied to industrial environments: Providing engineering guidelines for redesigning tools, machines, and work layouts Evaluating the demands placed on workers by current jobs Simulating alternative work methods Determining the potential for reducing physical job demands based on the implementation of new methods Topics also include: Fundamental ergonomic design principles at work Work-related musculoskeletal injuries, such as cumulative trauma to the upper extremity (CTDs) and low back disorders (LBDs), which affect several million workers each year with total costs exceeding $100 billion annually Current knowledge used for minimizing human suffering, potential for occupational disability, and related worker's compensation costs Working conditions under which musculoskeletal injuries might occur Engineering design measures for eliminating or reducing known job-risk factors Optimal manufacturing processes regarding human perceptual and cognitive abilities as well as task reliability Identifying the worker population affected by adverse conditions Early medical and work intervention efforts Economics of an ergonomics maintenance program Ergonomics as an essential cost to doing business Ergonomics intervention includes design for manufacturability, total quality management, and work organization. Occupational Ergonomics Handbook demonstrates how ergonomics serves as a vital component for the activities of the company and enables an advantageous cooperation between management and labor. This new handbook serves a broad segment of industrial practitioners, including industrial and manufacturing engineers; managers; plant supervisors and ergonomics professionals; researchers and students from academia, business, and government; human factors and safety specialists; physical therapists; cognitive and work psychologists; sociologists; and human-computer communications specialists.

ieee transactions on biomedical engineering impact factor: Biomedical Photoacoustics Wenfeng Xia, 2024-09-03 Photoacoustic imaging (also called optoacoustic imaging) is a hybrid modality based on the generation and detection of ultrasound in response to optical absorption of tissue. It combines advantages from both optical and ultrasound imaging, providing functional, molecular and microstructural information of tissue at scalable spatial resolution and depth. This technology has undergone exponential growth over the last two decades, and it is now widely viewed as one of the most exciting biomedical imaging modalities. This book introduces the technology and applications with chapters written by leading international research groups. It will be of interest to a wide range of audiences, including postgraduate students and researchers in physics and engineering as well as biomedical and clinical sciences. Chapters 8, 16, 17 and 21 are available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

ieee transactions on biomedical engineering impact factor: Battery-Free Sensor Networks for Sustainable Next-Generation IoT Connectivity Karthick, G.S., 2025-04-08 Battery-free sensor networks emerge as a pivotal technology for enabling sustainable, next-generation Internet of Things (IoT) connectivity. These networks leverage energy harvesting techniques, such as solar, thermal, or radiofrequency (RF) energy, to power sensors and devices, eliminating the need for traditional batteries. This reduces the environmental impact of battery disposal while extending the operational lifetime of IoT devices, making them more reliable and cost-effective. By harnessing energy sources, battery-free sensor networks hold the potential to revolutionize applications in smart cities, industrial monitoring, healthcare, and agriculture, contributing to the development of energy-efficient, self-sustaining IoT systems. Battery-Free Sensor Networks for Sustainable Next-Generation IoT Connectivity explores contemporary developments in battery-free sensor networks and their pivotal role in advancing sustainable connectivity within the next-generation IoT landscape. It delves into the latest advancements, challenges, and applications of battery-free sensor technologies, offering insights into their design principles, energy harvesting techniques, communication protocols, and deployment strategies. This book covers topics such as healthcare monitoring, sensor technology, and sustainability, and is a useful resource for engineers, scientists, environmentalists, business owners, academicians, researchers, and security professionals.

ieee transactions on biomedical engineering impact factor: Telehealth and Mobile Health Halit Eren, John G. Webster, 2015-11-18 The E-Medicine, E-Health, M-Health, Telemedicine, and Telehealth Handbook provides extensive coverage of modern telecommunication in the medical industry, from sensors on and within the body to electronic medical records and beyond. Telehealth and Mobile Health is the second volume of this handbook. Featuring chapters written by leading experts and

ieee transactions on biomedical engineering impact factor: Cardiovascular Imaging and Image Analysis Ayman El-Baz, Jasjit S. Suri, 2018-10-03 This book covers the state-of-the-art approaches for automated non-invasive systems for early cardiovascular disease diagnosis. It includes several prominent imaging modalities such as MRI, CT, and PET technologies. There is a special emphasis placed on automated imaging analysis techniques, which are important to biomedical imaging analysis of the cardiovascular system. Novel 4D based approach is a unique characteristic of this product. This is a comprehensive multi-contributed reference work that will detail the latest developments in spatial, temporal, and functional cardiac imaging. The main aim of this book is to help advance scientific research within the broad field of early detection of cardiovascular disease. This book focuses on major trends and challenges in this area, and it presents work aimed to identify new techniques and their use in biomedical image analysis. Key Features: Includes state-of-the art 4D cardiac image analysis Explores the aspect of automated segmentation of cardiac CT and MR images utilizing both 3D and 4D techniques Provides a novel procedure for improving full-cardiac strain estimation in 3D image appearance characteristics Includes extensive references at the end of each chapter to enhance further study

ieee transactions on biomedical engineering impact factor: Encyclopedia of Biomedical Engineering , 2018-09-01 Encyclopedia of Biomedical Engineering, Three Volume Set is a unique source for rapidly evolving updates on topics that are at the interface of the biological sciences and engineering. Biomaterials, biomedical devices and techniques play a significant role in improving the quality of health care in the developed world. The book covers an extensive range of topics related to biomedical engineering, including biomaterials, sensors, medical devices, imaging modalities and imaging processing. In addition, applications of biomedical engineering, advances in cardiology, drug delivery, gene therapy, orthopedics, ophthalmology, sensing and tissue engineering are explored. This important reference work serves many groups working at the interface of the biological sciences and engineering, including engineering students, biological science students, clinicians, and industrial researchers. Provides students with a concise description of the technologies at the interface of the biological sciences and engineering Covers all aspects of

biomedical engineering, also incorporating perspectives from experts working within the domains of biomedicine, medical engineering, biology, chemistry, physics, electrical engineering, and more Contains reputable, multidisciplinary content from domain experts Presents a ‘one-stop’ resource for access to information written by world-leading scholars in the field

ieee transactions on biomedical engineering impact factor: Intelligent Pervasive Computing Systems for Smarter Healthcare Arun Kumar Sangaiah, S.P. Shantharajah, Padma Theagarajan, 2019-06-21 A guide to intelligent decision and pervasive computing paradigms for healthcare analytics systems with a focus on the use of bio-sensors Intelligent Pervasive Computing Systems for Smarter Healthcare describes the innovations in healthcare made possible by computing through bio-sensors. The pervasive computing paradigm offers tremendous advantages in diversified areas of healthcare research and technology. The authors—noted experts in the field—provide the state-of-the-art intelligence paradigm that enables optimization of medical assessment for a healthy, authentic, safer, and more productive environment. Today’s computers are integrated through bio-sensors and generate a huge amount of information that can enhance our ability to process enormous bio-informatics data that can be transformed into meaningful medical knowledge and help with diagnosis, monitoring and tracking health issues, clinical decision making, early detection of infectious disease prevention, and rapid analysis of health hazards. The text examines a wealth of topics such as the design and development of pervasive healthcare technologies, data modeling and information management, wearable biosensors and their systems, and more. This important resource: Explores the recent trends and developments in computing through bio-sensors and its technological applications Contains a review of biosensors and sensor systems and networks for mobile health monitoring Offers an opportunity for readers to examine the concepts and future outlook of intelligence on healthcare systems incorporating biosensor applications Includes information on privacy and security issues on wireless body area network for remote healthcare monitoring Written for scientists and application developers and professionals in related fields, Intelligent Pervasive Computing Systems for Smarter Healthcare is a guide to the most recent developments in intelligent computer systems that are applicable to the healthcare industry.

ieee transactions on biomedical engineering impact factor: Biomedical Engineering: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources, 2017-07-13 Technological tools and computational techniques have enhanced the healthcare industry. These advancements have led to significant progress and novel opportunities for biomedical engineering. Biomedical Engineering: Concepts, Methodologies, Tools, and Applications is an authoritative reference source for emerging scholarly research on trends, techniques, and future directions in the field of biomedical engineering technologies. Highlighting a comprehensive range of topics such as nanotechnology, biomaterials, and robotics, this multi-volume book is ideally designed for medical practitioners, professionals, students, engineers, and researchers interested in the latest developments in biomedical technology.

ieee transactions on biomedical engineering impact factor: A Multiscale In Silico Study to Characterize the Atrial Electrical Activity of Patients With Atrial Fibrillation : A Translational Study to Guide Ablation Therapy Sánchez Arciniegas, Jorge Patricio, 2022-05-30 The atrial substrate undergoes electrical and structural remodeling during atrial fibrillation. Detailed multiscale models were used to study the effect of structural remodeling induced at the cellular and tissue levels. Simulated electrograms were used to train a machine-learning algorithm to characterize the substrate. Also, wave propagation direction was tracked from unannotated electrograms. In conclusion, in silico experiments provide insight into electrograms' information of the substrate.

ieee transactions on biomedical engineering impact factor: *Using the Engineering Literature* Bonnie A. Osif, 2016-04-19 With the encroachment of the Internet into nearly all aspects of work and life, it seems as though information is everywhere. However, there is information and then there is correct, appropriate, and timely information. While we might love being able to turn to Wikipedia for encyclopedia-like information or search Google for the thousands of links

ieee transactions on biomedical engineering impact factor: *XIV Mediterranean Conference on Medical and Biological Engineering and Computing 2016* Efthyvoulos Kyriacou, Stelios Christofides, Constantinos S. Pattichis, 2016-03-31 This volume presents the proceedings of Medicon 2016, held in Paphos, Cyprus. Medicon 2016 is the XIV in the series of regional meetings of the International Federation of Medical and Biological Engineering (IFMBE) in the Mediterranean. The goal of Medicon 2016 is to provide updated information on the state of the art on Medical and Biological Engineering and Computing under the main theme “Systems Medicine for the Delivery of Better Healthcare Services”. Medical and Biological Engineering and Computing cover complementary disciplines that hold great promise for the advancement of research and development in complex medical and biological systems. Research and development in these areas are impacting the science and technology by advancing fundamental concepts in translational medicine, by helping us understand human physiology and function at multiple levels, by improving tools and techniques for the detection, prevention and treatment of disease. Medicon 2016 provides a common platform for the cross fertilization of ideas, and to help shape knowledge and scientific achievements by bridging complementary disciplines into an interactive and attractive forum under the special theme of the conference that is Systems Medicine for the Delivery of Better Healthcare Services. The programme consists of some 290 invited and submitted papers on new developments around the Conference theme, presented in 3 plenary sessions, 29 parallel scientific sessions and 12 special sessions.

ieee transactions on biomedical engineering impact factor: Basic Sciences for MCEM Chetan Trivedy, Matthew Hall, Harold Ellis, 2016-05-15 This book is a dedicated resource for those sitting the Part A of the MCEM (Membership of the College of Emergency Medicine) examination. It forms an essential revision guide for emergency trainees who need to acquire a broad understanding of the basic sciences, which underpin their approach to clinical problems in the emergency department. Common clinical scenarios are used to highlight the essential underlying basic science principles, providing a link between clinical management and a knowledge of the underlying anatomical, physiological, pathological and biochemical processes. Multiple choice questions with reasoned answers are used to confirm the candidates understanding and for self testing. Unlike other recent revision books which provide MCQ questions with extended answers, this book uses clinical cases linked to the most recent basic science aspects of the CEM syllabus to provide a book that not only serves as a useful revision resource for the Part A component of the MCEM examination, but also a unique way of understanding the processes underlying common clinical cases seen every day in the emergency department. This book is essential for trainees sitting the Part A of the MCEM exam and for clinicians and medical students who need to refresh their knowledge of basic sciences relevant to the management of clinical emergencies.
