**mayo clinic sleep medicine update 2024: Novel Technologies in the Diagnosis and Management of Sleep-disordered Breathing** Henri Korkalainen, Ding Zou, 2024-03-13

Sleep-disordered breathing, ranging from habitual snoring to severe obstructive sleep apnea, is highly prevalent and represents a growing global healthcare burden. Besides disrupting sleep, sleep-disordered breathing leads to detrimental outcomes such as excessive daytime sleepiness, neurocognitive impairment, and increased cardiometabolic morbidities. The gold standard diagnostic procedures (e.g., in-lab polysomnography) are cumbersome and standard parameters derived from sleep studies often yield poor long-term prognostic value. Hence, there is a need for innovative diagnostic technologies and novel sleep metrics to enable simple diagnosis and tailored disease management.

**mayo clinic sleep medicine update 2024:** *The Later Years* Sir Peter Thornton, 2025-02-27

'Deeply practical' The Times The essential guide to all you need to know and do as you get older and closer to the end of life. 'Peter Thornton is like a death doula. I've already ordered five copies' Alice Thomson in The Times It is not difficult to imagine the sense of panic when faced with the sheer administrative hassle of the end of life, despite the fact that it will come to us all sooner or later. As we get older, all that needs to be done can feel alarmingly daunting. The good news is that Sir Peter Thornton KC has rationally organised and prioritised everything we need to know, and presents it in a simple, straightforward way that encourages us to complete all the necessary tasks. With chapters on what to do before death (such as a will and a Lasting Power of Attorney), money, pensions, inheritance tax, scams, health, home, care, your rights, and what to do after the death of a loved one, this puts all the information in one place, and is as easy to follow as a shopping list.

**mayo clinic sleep medicine update 2024:** Clinical Application of Artificial Intelligence in Emergency and Critical Care Medicine, Volume IV Zhongheng Zhang, Rahul Kashyap, Longxiang Su, Nan Liu, Qinghe Meng, 2024-01-23 This Research Topic is the fourth volume of the series Clinical Application of Artificial Intelligence in Emergency and Critical Care Medicine Volume I: Clinical Application of Artificial Intelligence in Emergency and Critical Care Medicine, Volume I Volume II: Clinical Application of Artificial Intelligence in Emergency and Critical Care Medicine, Volume II Volume III: Clinical Application of Artificial Intelligence in Emergency and Critical Care Medicine, Volume III Analytics based on artificial intelligence has greatly advanced scientific research fields like natural language processing and imaging classification. Clinical research has also greatly benefited from artificial intelligence. Emergency and critical care physicians face patients with rapidly changing conditions, which require accurate risk stratification and initiation of rescue therapy. Furthermore, critically ill patients, such as those with sepsis, acute respiratory distress syndrome, and trauma, are comprised of heterogeneous population. The "one-size-fit-all" paradigm may not fit for the management of such heterogeneous patient population. Thus, artificial intelligence can be employed to identify novel subphenotypes of these patients. These sub classifications can provide not only prognostic value for risk stratification but also predictive value for individualized treatment. With the development of transcriptome providing a large amount of information for an individual, artificial intelligence can greatly help to identify useful information from high dimensional data. Altogether, it is of great importance to further utilize artificial intelligence in the management of critically ill patients.
