maui research technology park: Telecommunications technology and Native Americans : opportunities and challenges. , 1995 'Telecommunications Technology and Native Americans: Opportunities and Challenges' examines the potential of telecommunications to improve the socioeconomic conditions of Native Americans - American Indians, Alaska Natives, and Native Hawaiians - living in rural, remote areas, and to help them maintain their cultures and exercise control over their lives and destinies. The report discusses the opportunities for Native Americans to use telecommunications (including computer networking, videoconferencing, multimedia, digital and wireless technologies, and the like) in the realms of culture, education, health care, economic development, and governance. It also explores the challenges and barriers to realizing these opportunities, notably the need to improve the technology infrastructure (and access to it), technical training, leadership, strategic partnerships, and telecommunications planning on Indian reservations and in Alaska Native villages and Native Hawaiian communities. Prepared at the request of the Senate Committee on Indian Affairs, this is the first federal government report on Native American telecommunications. It provides a framework for technology planning and policy actions by Congress and relevant federal agencies, as well as by Native leaders and governments. Native Americans were involved throughout the study. OTA made site visits to six states and consulted with Native leaders and technology experts in about two dozen other states. Computer networking was used extensively for research and outreach, and OTA developed the Native American Resource Page for this study, a World Wide Web home page accessible via OTA Online (<http://www.ota.gov/nativea.html>).

Blackford, 2018-03-31 Ranging from the Hawaiian Archipelago to the Aleutian Islands, from Silicon Valley to Guam, Pathways to the Present is a thoroughly researched and concisely argued account of economic and environmental change in the postwar American Pacific. Following a brief survey of the history of the Pacific, the author takes the Hawaiian Islands as the center of American activities in the region and looks at interactions among native Hawaiian, developmental, military, and environmental issues in the archipelago after World War II. He then turns to land- and water-use problems that have intersected with more nebulous quality-of-life concerns to generate policy controversies in the Seattle region and the San Francisco Bay area, especially Silicon Valley. Economic expansion and environmentalism in Alaska are examined through the lens of changes occurring along the Aleutians. From there the study considers Hiroshima after its destruction by the atomic bomb in 1945, looking at residents' desire to combine urban-planning concepts. The author investigates the effort to
