mcmaster centre for continuing education: Research Anthology on Adult Education and the Development of Lifelong Learners Management Association, Information Resources, 2021-03-19 Whether it is earning a GED, a particular skill, or technical topic for a career, taking classes of interest, or even returning to begin a degree program or completing it, adult learning encompasses those beyond the traditional university age seeking out education. This type of education could be considered non-traditional as it goes beyond the typical educational path and develops learners that are self-initiated and focused on personal development in the form of gaining some sort of education. Essentially, it is a voluntary choice of learning throughout life for personal and professional development. While there is often a large focus towards K-12 and higher education, it is important that research also focuses on the developing trends, technologies, and techniques for providing adult education along with understanding lifelong learners' choices, developments, and needs. The Research Anthology on Adult Education and the Development of Lifelong Learners focuses specifically on adult education and the best practices, services, and educational environments and methods for both the teaching and learning of adults. This spans further into the understanding of what it means to be a lifelong learner and how to develop adults who want to voluntarily contribute to their own development by enhancing their education level or knowledge of certain topics. This book is essential for teachers and professors, course instructors, business professionals, school administrators, practitioners, researchers, academicians, and students interested in the latest advancements in adult education and lifelong learning.

mcmaster centre for continuing education: Handbook of Research on Virtual Training and Mentoring of Online Instructors Keengwe, Jared, 2018-07-06 To meet the dynamic academic demands of twenty-first century digital learners, many institutions of higher learning are offering more online classes than ever before that are accessible to both traditional and non-traditional learners. As such, a growing demand for online courses implies that participating institutions provide faculty with appropriate professional development programs to ensure the design and delivery of quality online courses. The Handbook of Research on Virtual Training and Mentoring of Online Instructors is a critical scholarly resource that highlights the issues, challenges, and online engagement experiences to enhance effective teaching and learning in this learning environment. Featuring coverage on a broad range of topics such as media literacy, professional development, and virtual learning environments, this book is geared towards educational administrators, educators, and instructional designers interested in quality online instruction.

mcmaster centre for continuing education: Handbook of Research on Innovative Pedagogies and Best Practices in Teacher Education Keengwe, Jared, 2019-07-05 Educators and those who prepare teachers are facing increased scrutiny on their practice that include pressures to demonstrate their effectiveness, meet the needs of changing demographics and students, and adapt to ever-changing learning environments. Thus, there is a need for innovative pedagogies and adoption of best practices to effectively serve the needs of digital learners. The

Handbook of Research on Innovative Pedagogies and Best Practices in Teacher Education is an essential research book that takes an in-depth look at the methods by which educators are prepared to address shifting demographics and technologies in the classroom and provides strategies for focusing their curricula on diverse learning types. It takes a look at the use of innovative pedagogies and effective learning spaces in teacher education programs and the decisions behind them to enhance more inquiry learning, STEM initiatives, and provide more kinds of exploratory learning for students. Covering topics such as higher education, virtual reality, and inclusive education, this book is ideally designed for teachers, administrators, academicians, instructors, and researchers.

mcmaster centre for continuing education: Handbook of Research on Innovations in Non-Traditional Educational Practices Keengwe, Jared, 2020-12-11 While many school districts and institutions of higher education still cling to the traditional agrarian school year with a factory model delivery of education and Carnegie units based on seat time when most people are no longer farmers, factory workers, or reliant on learning in a classroom, there are bursts of promising practices that buck the norm by questioning the educational value of these traditions. Though researchers have investigated the potential of students learning in their own homes via personalized instruction delivered by computers rather than attending traditional institutions, the status quo in education has remained stubbornly resistant to change. Mixed-reality simulations, year-round schooling, grouping students by competencies instead of age, and game-based teaching are just a few of the educational innovations that seek to maximize learning by recognizing that innovation is essential for successfully teaching students in the modern era. The Handbook of Research on Innovations in Non-Traditional Educational Practices is a comprehensive reference source that examines various educational innovations, how they have developed workarounds to navigate traditional systems, and their potential to radically transform teaching and learning. With each chapter highlighting a different educational innovation such as experiential learning, game-based learning, online learning, and inquiry-based learning and their applications in all levels of education, this book explores the issues and challenges these educational innovations face as well as their impact. It is intended for academicians, professionals, administrators, and researchers in education and specifically benefits academic deans, vice presidents of academic affairs, graduate students, faculty technology leaders, directors of teaching and learning centers, curriculum and instructional designers, policymakers, principals and superintendents, and teachers interested in educational change.

mcmaster centre for continuing education: Research Anthology on Developing Effective Online Learning Courses Management Association, Information Resources, 2020-12-18 In the current educational environment, there has been a shift towards online learning as a replacement for the traditional in-person classroom experience. With this new environment comes new technologies, benefits, and challenges for providing courses to students through an entirely digital environment. With this shift comes the necessary research on how to utilize these online courses and how to develop effective online educational materials that fit student needs and encourage student learning, motivation, and success. The optimization of these online tools requires a deeper look into curriculum, instructional design, teaching techniques, and new models for student assessment and evaluation. Information on how to create valuable online course content, engaging lesson plans for the digital space, and meaningful student activities online are only a few of many current topics of interest for promoting student achievement through online learning. The Research Anthology on Developing Effective Online Learning Courses provides multiple perspectives on how to develop engaging and effective online learning courses in the wake of the rapid digitalization of education. This book includes topics focused on online learners, online course content, effective online instruction strategies, and instructional design for the online environment. This reference work is ideal for curriculum developers, instructional designers, IT consultants, deans, chairs, teachers, administrators, academicians, researchers, and students interested in the latest research on how to

create online learning courses that promote student success.

Fleming, 1971-12-15 Post-secondary education is one of the fastest growing segments of the educational system. In this volume the development and activities of universities, colleges of applied arts and technology, and other institutions of post-secondary education are described in detail. The public and private training activities of business and industry are outlined, and government programs for adult retraining described. Dr Fleming traces the origins of the institutes of technology and the college of applied art and technology, and he provides capsule histories of every university in Ontario.

mcmaster centre for continuing education: *Steel City* M.J. Dear, J.J. Drake, L.G. Reeds, 1987-12-15 From its establishment nearly 200 years ago as a village at the centre of an agricultural district, Hamilton has grown into one of Canada's biggest industrial centres, at the heart of a highly developed regional municipality. The story of its changing landscapes, both physical and human, is presented in the nineteen essays that make up this volume, all by geographers associated with Hamilton's McMaster University. Change is the essence of the story. Each contributor focuses on one aspect of the past, present, or future landscapes of Hamilton, and places it within the context of change in the region. The first series of essays explores physical landscapes – geology and relief, climate, soils, vegetation, and hydrology – and shows how human activity has moulded them. The second group charts the evolution of human landscapes in the region, paying special attention to contemporary Hamilton with its rich and diverse combination of people and cultures, and also to the political intrigue that surrounded the introduction of regional government to the area. Finally a third series focuses on the functioning of the Hamilton region. Within a highly complex system, the city and region balance a broad range of often contradictory trends and activities. The contributors examine the difficulties facing agriculture in a rapidly urbanizing region; the importance of Hamilton in caring for welfare-dependent populations; the future of steel in Steel City; the challenges posed by energy requirements in the region; and the hard choices facing policy-makers. The last two essays discuss the role played by McMaster University in the life of the region, and the landscape of Hamilton today: a remarkable complex of historical interest, great natural beauty, and modern city life.

mcmaster centre for continuing education: *Innovations in the Design and Application of Alternative Digital Credentials* Piedra, Daniel, 2021-11-12 The world of academic credentials is going through a rapid change that has seen the emergence of alternate digital credentials. Among these are micro-certificates, digital diplomas, and open digital badges, which provide a digital record of learning and have the possibility of not only altering the landscape of academic credentials but also transforming the relationship between institutions of higher education, their learners, and society. As institutions turn their attention to alternate digital credentials, it is important to learn from what others have experienced. *Innovations in the Design and Application of Alternative Digital Credentials* identifies innovative examples of the use of alternate digital credentials to validate specific skills within an existing academic program or on their own. Alternate digital credentials may

be how specific skills (hard or soft) are validated with an emphasis on their relationship to enhance employability and recognition within an industry. Covering a wide range of topics such as micro-credentials, badge-driven learning, and traditional credentials, this handbook is ideal for researchers, students, academicians, and administrative decision makers, as well as those who support and finance learning systems and theories and those already involved in the design and application of alternate digital credentials at the post-secondary level.
