mckinley institute of technology photos: The Technology-Energy-Environment-Health (TEEH) Chain In China Karen Polenske, 2006-07-11 Since 1997, the AGS China cokemaking team has been examining the rapidly changing relationships among technology, energy, the environment, and health (TEEH) in one of China's most energy-intensive and highly polluting industries--cokemaking. The team has developed analytical tools and methods that can be used to examine TEEH issues in almost any industry in any country. Their findings tell a fascinating story--a story that not only teaches us how we can begin to analyze unfamiliar industries through the TEEH lens, but also reveals the often unexpected consequences of industrial management and technology decisions. Coke is unusual in that it is at the same time both particularly unglamorous and particularly important--as a result, key industrial changes occurring in China with far-reaching

global economic and environmental impacts often go unnoticed. This book is a major step in closing the knowledge gap of those impacts. The editor supplements the detailed and informative text with photos illustrating the new and old technologies used in Shanxi Province from 1998 through 2004. The TEEH approach should serve as a template for scholars, industrial and resource managers, and economic development strategists for years to come. --Adam Rose, Professor of Energy, Environmental, and Regional Economics, The Pennsylvania State University Impressive. This book, the result of seven years of interdisciplinary work, proves that the China cokemaking team is contributing to the forefront of the field. --Wang Huijiong, Vice President, Academic Committee, Development Research Center, State Council, People's Republic of China, and Li Shantong, Vice President, Academic Committee, Development Foundation This book is timely and relevant...[It] describes many aspects of recent, dramatic transformations in the [coke] industry and uses new survey and planning tools to provide descriptive and analytic information that should be useful to policy analysts. --Zmarak Shalizi, Senior Research Manager for Infrastructure and Environment Research, the World Bank This [is a] timely, comprehensive study . . . Prof. Polenske is to be commended for a very readable analysis of cokemaking, during a period of unprecedented growth in the coke industry and the economy in China, illustrated by a large number of photographs. --Adel Sarofim, Presidential Professor, College of Engineering, University of Utah, formerly MIT Lamot du Pont Professor of Chemical Engineering

mckinley institute of technology photos: *Technology and Public Management* Alan R. Shark, 2022-12-30 Students of public administration, public policy, and nonprofit management require a

strong foundation in how government and NGOs are connected with information technology. Whether simplifying internal operations, delivering public-facing services, governing public utilities, or conducting elections, public administrators must understand these technological tools and systems to ensure they remain effective, efficient, and equitable. This innovative textbook is designed for students of public affairs at every level who need to know and understand how technology can be applied in today's public management workplace. The book explores the latest trends in technology, providing real-life examples about the need for policies and procedures to safeguard technology infrastructure while providing greater openness, participation, and transparency. In *Technology and Public Management, Second Edition*, author Alan Shark informs, engages, and directs students to consider best practices, with new material on emerging technology, data management and analytics, artificial intelligence, and cybersecurity. This thoroughly updated second edition explores: A broad range of technologies on which government, nonprofit partners, and citizens depend upon to deliver important infrastructure, including security, education, public health and personal healthcare, transit and transportation, culture and commerce. Growing mistrust in government, and the role technology can play in ameliorating it. Emerging and adapted technologies to help government achieve ambitious goals, including drawing carbon out of the atmosphere, empowering students everywhere to learn effectively at home or at school, improving healthcare, providing affordable housing, enabling agriculture to keep pace with population growth, and improving scores of other public services. The critical insights and management skills needed to argue for investments in information technology as necessary priorities for our public organizations to improve public services and resources. This reader-friendly and jargon-free textbook is required for students enrolled in public administration and nonprofit management programs, as well as for practicing public administrators looking for a better understanding of how technology may be successfully and responsibly used in public organizations. It is equally valuable as a text for MBA studies, social work, education, public health, and other degree programs that produce graduates who will work with and within those organizations that deliver public services.
