mechanical engineering curriculum gatech: Curriculum Models for the 21st Century

Maree Gosper, Dirk Ifenthaler, 2013-08-28 Changing student profiles and the increasing availability of mainstream and specialized learning technologies are stretching the traditional face-to-face models of teaching and learning in higher education. Institutions, too, are facing far-reaching systemic changes which are placing strains on existing resources and physical infrastructure and calling into question traditional ways of teaching through lectures and tutorials. And, with an ever-increasing scrutiny on teaching and teachers' accountability for positive educational outcomes, the call for closer attention to learning, teaching and, most especially, to the design and delivery of the curriculum is given increasing relevance and importance. Research provides strong evidence of the potential for technologies to facilitate not only cognition and learning but also to become integral components in the redesign of current curriculum models. Some Universities and individual academics have moved along this pathway, developing new and innovative curriculum, blending pedagogies and technologies to suit their circumstances. Yet, there are others, unsure of the possibilities, the opportunities and constraints in these changing times. Curriculum Models for the 21st Century gives insights into how teaching and learning can be done differently. The focus is on a whole of curriculum approach, looking at theoretical models and examples of practice which

capitalize on the potential of technologies to deliver variations and alternatives to the more traditional lecture-based model of University teaching.

The architectural development of Georgia Tech began as a core of Victorian-era buildings sited around a campus green and Tech Tower. During the subsequent Beaux-Arts era, designers (who were also members of the architecture faculty) added traditionally styled buildings, with many of them in a pseudo-Jacobean collegiate redbrick style. Early Modernist Paul Heffernan led an architectural revolution in his academic village of functionalist buildings on campus--an aesthetic that inspired additional International Style campus buildings. Formalist, Brutalist, and Post-Modern architecture followed, and when Georgia Tech was selected as the Olympic Village for the 1996 Summer Olympics, new residence halls were added to the campus. Between 1994 and 2008, Georgia Tech president G. Wayne Clough stewarded over \$1 billion in capital improvements at the school, notably engaging midtown Atlanta with the development of Technology Square. The landscape design by recent campus planners is especially noteworthy, featuring a purposeful designation of open spaces, accommodations for pedestrian perambulations, and public art. What might have developed into a prosaic assemblage of academic and research buildings has instead evolved into a remarkably competent assemblage of aesthetically pleasing architecture.

mechanical engineering curriculum gatech: Pre-Milestone A and Early-Phase Systems Engineering National Research Council, Division on Engineering and Physical Sciences, Air Force Studies Board, Committee on Pre-Milestone A Systems Engineering: A Retrospective Review and Benefits for Future Air Force Systems Acquisition, 2008-02-11 The ability of U.S. military forces to field new weapons systems quickly and to contain their cost growth has declined significantly over the past few decades. There are many causes including increased complexity, funding instability, bureaucracy, and more diverse user demands, but a view that is gaining more acceptance is that better systems engineering (SE) could help shorten development time. To investigate this assertion in more detail, the US Air Force asked the NRC to examine the role that SE can play during the acquisition life cycle to address root causes of program failure especially during pre-milestone A and early program phases. This book presents an assessment of the relationship between SE and program outcome; an examination of the SE workforce; and an analysis of SE functions and guidelines. The latter includes a definition of the minimum set of SE processes that need to be accounted for during project development.
