positively living choice health network: Living with HIV and Dying with AIDS Lesley Doyal, 2016-05-13 There is now a vast literature on HIV and AIDS but much of it is based on traditional biomedical or epidemiological approaches. Hence it tells us very little about the experiences of the millions of people whose living and dying constitute the reality of this devastating pandemic. Doyal brings together findings from a wide range of empirical studies spanning the social sciences to explore experiences of HIV positive people across the world. This will illustrate how the disease is physically manifested and psychologically internalised by individuals in diverse ways depending on the biological, social, cultural and economic circumstances in which they find themselves. A proper understanding of these commonalities and differences will be essential if future strategies are to be effective in mitigating the effects of HIV and AIDS. Doyal shows that such initiatives will also require a better appreciation of the needs and rights of those affected within the wider context of global inequalities and injustices. Finally, she outlines approaches to address these challenges. This book will appeal to everyone involved in struggles to improve the well-being of those with HIV and AIDS. While academically rigorous, it is written in an accessible manner that transcends specific disciplines and, through its extensive bibliography, provides diverse source material for future teaching, learning and research.

positively living choice health network: The Healing Power of Community Lusijah Marx, Graham Harriman, Robin McCoy Brooks, 2024-07-04 The Healing Power of Community offers a diverse cross section of interdisciplinary and depth-psychological perspectives in support of using mutual aid approaches in all levels of group and community practice as a remedy for individualism and social and political divisions, centering social justice. Written by three distinct voices who collaborated at the height of the AIDS crisis, the book begins with an autoethnographic study of Project Quest, an HIV/AIDS clinic established in 1989, before looking at how the lessons learnt from this clinic can be applied to our current global mental health climate. Filled with clinical and theoretical applications, chapters include content on what mutual aid communities are, rethinking professionalism and boundaries in a crisis, healing collective trauma, group psychotherapy, psychodrama, depth psychology, and how mental health professionals can support radical change of key structures in nonprofit clinics, public administration, private practice, and research. Arguing for their approach of radicalizing mental health and community-based practice today, the book examines how this can be achieved by moving beyond individual-level approaches, creating new frameworks to meet the mental health needs of our era in creative ways. This book is designed to engage clinical social workers and mental health care clinicians working in community-based mental health, as well as those involved in community psychology, collective trauma and grief, HIV/AIDS advocacy, policy making, and political advocacy.

positively living choice health network: The Routledge Handbook of Poverty in the United States Stephen Haymes, Maria Vidal de Haymes, Reuben Miller, 2014-12-17 In the United States, the causes and even the meanings of poverty are disconnected from the causes and meanings of global poverty. The Routledge Handbook of Poverty in the United States provides an authoritative overview of the relationship of poverty with the rise of neoliberal capitalism in the context of globalization. Reorienting its national economy towards a global logic, US domestic policies have promoted a market-based strategy of economic development and growth as the obvious solution to alleviating poverty, affecting approaches to the problem discursively, politically, economically, culturally and experientially. However, the handbook explores how rather than alleviating poverty, it has instead exacerbated poverty and pre-existing inequalities – privatizing the services of social welfare and educational institutions, transforming the state from a benevolent to a punitive state, and criminalizing poor women, racial and ethnic minorities, and immigrants. Key issues examined by the international selection of leading scholars in this volume include: income distribution, employment, health, hunger, housing and urbanization. With parts focusing on the lived experience of the poor, social justice and human rights frameworks – as opposed to welfare rights models – and the role of helping professions such as social work, health and education, this comprehensive handbook is a vital reference for anyone working with those in poverty, whether directly or at a macro level.
