

post stroke speech therapy

post stroke speech therapy is a critical component of rehabilitation for individuals who experience speech and language impairments following a stroke. Strokes can cause significant disruptions to communication abilities, including difficulties with speaking, understanding language, reading, and writing. Effective post stroke speech therapy aims to help patients regain their communication skills, improve their quality of life, and enhance their social interactions. This article explores the importance of speech therapy after a stroke, the types of communication disorders it addresses, the therapeutic techniques used, and the role of caregivers in the recovery process. Additionally, it discusses the timeline for therapy, setting realistic goals, and advances in treatment options for post stroke speech therapy. The following sections will provide a comprehensive overview of these critical aspects.

- Understanding Post Stroke Communication Disorders
- Goals and Benefits of Post Stroke Speech Therapy
- Common Techniques Used in Speech Therapy
- Role of Caregivers and Family Support
- Timeline and Expectations for Recovery
- Advanced Therapies and Technologies

Understanding Post Stroke Communication Disorders

Post stroke speech therapy primarily addresses communication disorders caused by brain damage resulting from a stroke. These impairments vary depending on the location and severity of the stroke and may affect different aspects of communication.

Aphasia

Aphasia is one of the most common communication disorders following a stroke. It affects a person's ability to produce or comprehend language. There are several types of aphasia, including expressive aphasia, where patients have trouble speaking or writing, and receptive aphasia, which impairs understanding spoken or written language.

Apraxia of Speech

Apraxia of speech involves difficulties in coordinating the movements necessary for speech production. Individuals with this condition know what they want to say but struggle to physically form the words correctly, resulting in distorted or inconsistent speech patterns.

Dysarthria

Dysarthria is characterized by weakened or paralyzed muscles used for speech, leading to slurred or slow speech. This condition affects the clarity, volume, and rhythm of speech and can co-occur with other communication deficits after stroke.

Other Cognitive-Communication Disorders

Some stroke survivors may experience cognitive-communication disorders, which include difficulties with attention, memory, problem-solving, and organizing thoughts. These challenges affect the ability to effectively communicate despite intact language skills.

Goals and Benefits of Post Stroke Speech Therapy

The primary goal of post stroke speech therapy is to restore as much communication function as possible, allowing individuals to engage in everyday activities and social interactions independently. Therapy also aims to reduce frustration and improve emotional well-being.

Restoration of Communication Skills

Speech therapy focuses on re-training the brain and muscles involved in speech and language. It encourages the relearning of language skills and helps compensate for lost abilities by teaching alternative communication strategies.

Enhancing Quality of Life

Improving communication abilities enhances social participation and personal relationships, which are essential for emotional health. Effective therapy supports patients in returning to work, school, or community activities, thereby promoting overall quality of life.

Prevention of Secondary Complications

Post stroke speech therapy also helps prevent secondary complications such as social isolation, depression, and anxiety that often result from communication difficulties. Early intervention is key to minimizing these risks.

Common Techniques Used in Speech Therapy

Speech-language pathologists (SLPs) employ a variety of evidence-based techniques tailored to the individual's specific communication deficits. These approaches aim at improving speech production, language comprehension, and alternative communication methods.

Language Exercises

Therapists use structured language exercises to improve vocabulary, sentence formation, and comprehension. These exercises may involve naming objects, answering questions, following directions, and practicing conversation skills.

Articulation Therapy

For patients with apraxia or dysarthria, articulation therapy focuses on improving the accuracy and clarity of speech sounds. Techniques include repetitive practice of sounds, syllables, and words to strengthen muscle coordination.

Melodic Intonation Therapy (MIT)

MIT uses the musical elements of speech, such as melody and rhythm, to improve verbal expression in patients with severe aphasia. This technique leverages the brain's right hemisphere, which is often less affected by stroke.

Augmentative and Alternative Communication (AAC)

When verbal communication is significantly impaired, AAC devices such as communication boards, speech-generating devices, or smartphone apps are introduced. These tools help patients express their needs and participate in conversations.

Group Therapy

Group sessions provide social interaction opportunities and peer support, which are beneficial for practicing communication skills in real-life contexts and reducing feelings of isolation.

Role of Caregivers and Family Support

Caregivers and family members play an essential role in supporting the speech therapy process. Their involvement can significantly influence the success of rehabilitation efforts.

Encouragement and Motivation

Family members provide emotional support and motivation, encouraging consistent practice of speech exercises and helping patients stay engaged with therapy goals.

Facilitating Communication at Home

Caregivers can assist by creating a communication-friendly environment, using simple language, speaking slowly, and giving patients adequate time to respond. They can also help with practicing therapeutic exercises outside of sessions.

Education and Training

Speech therapists often educate caregivers on communication strategies, use of AAC devices, and ways to manage frustration or behavioral changes related to communication deficits.

Timeline and Expectations for Recovery

The timeline for recovery varies widely among stroke survivors, influenced by factors such as stroke severity, age, overall health, and the promptness of therapy initiation.

Early Intervention

Starting speech therapy as soon as possible after a stroke is associated with better outcomes. Early intervention capitalizes on the brain's neuroplasticity, facilitating more efficient recovery of language and speech functions.

Short-Term and Long-Term Goals

Therapists establish both short-term and long-term goals tailored to the patient's needs. Short-term goals focus on basic communication skills and functional improvements, while long-term goals aim for greater independence and social reintegration.

Variability in Progress

Recovery is often gradual and may include periods of rapid improvement and plateaus. Some patients regain nearly all speech abilities, while others may need ongoing support and alternative communication methods.

Advanced Therapies and Technologies

Recent advancements in neuroscience and technology have introduced innovative approaches to enhance post stroke speech therapy outcomes.

Neuromodulation Techniques

Techniques such as transcranial magnetic stimulation (TMS) and transcranial direct current stimulation (tDCS) are being researched for their potential to stimulate brain areas involved in language, promoting faster recovery.

Computer-Assisted Therapy

Computer-based programs provide interactive language and speech exercises that patients can use independently or with therapist supervision. These tools offer personalized feedback and allow for flexible practice schedules.

Virtual Reality (VR) Applications

VR technology creates immersive environments where patients can practice communication skills in simulated real-world scenarios, enhancing motivation and engagement during therapy.

Telepractice

Telepractice enables remote delivery of speech therapy services via video conferencing, increasing accessibility for patients with mobility challenges or those living in underserved areas.

- Post stroke speech therapy addresses various communication disorders such as aphasia, apraxia, and dysarthria.
- The primary goals include restoring speech and language abilities, enhancing quality of life, and preventing secondary complications.
- Therapeutic techniques range from language exercises and articulation therapy to AAC and group sessions.
- Caregivers and family support play a vital role in facilitating communication and motivating patients.
- Recovery timelines vary, with early intervention significantly improving outcomes.
- Advanced therapies like neuromodulation, computer-assisted programs, VR, and telepractice are emerging to support rehabilitation.

Frequently Asked Questions

What is post stroke speech therapy?

Post stroke speech therapy is a rehabilitation process designed to help individuals regain communication skills that have been impaired due to a stroke. It focuses on improving speech, language, swallowing, and cognitive-communication abilities through tailored exercises and techniques.

When should post stroke speech therapy begin?

Post stroke speech therapy should ideally begin as soon as the patient is medically stable, often within days to weeks after the stroke. Early intervention can significantly improve recovery outcomes by taking advantage of the brain's neuroplasticity.

What are common techniques used in post stroke speech therapy?

Common techniques include articulation exercises, language drills, voice therapy, cognitive-communication tasks, and the use of assistive communication devices. Therapists may also use melodic intonation therapy and constraint-induced language therapy depending on the patient's needs.

How long does post stroke speech therapy typically

last?

The duration of post stroke speech therapy varies widely depending on the severity of the stroke and the individual's progress. Therapy can last from a few weeks to several months or even years, with ongoing maintenance therapy in some cases.

Can post stroke speech therapy improve swallowing difficulties?

Yes, post stroke speech therapy often includes treatment for dysphagia (swallowing difficulties). Speech therapists use specific exercises and techniques to strengthen the muscles involved in swallowing and to ensure safe eating and drinking.

Are there any technological tools that assist in post stroke speech therapy?

Yes, technology plays an important role in post stroke speech therapy. Tools such as speech-generating devices, mobile apps for language practice, teletherapy platforms, and virtual reality programs are increasingly used to enhance therapy effectiveness and accessibility.

Additional Resources

1. Speech Therapy After Stroke: A Practical Guide

This book provides comprehensive strategies for speech-language pathologists working with stroke survivors. It covers assessment techniques, treatment planning, and evidence-based interventions to improve communication skills. The guide emphasizes patient-centered care and includes case studies to illustrate effective therapy approaches.

2. Recovering Communication: Post-Stroke Speech and Language Therapy

Focused on the rehabilitation of speech and language impairments after stroke, this book explores various types of aphasia and dysarthria. It offers practical exercises and therapeutic activities designed to enhance speech clarity and language comprehension. The author integrates the latest research findings with clinical practice.

3. Neurorehabilitation of Speech and Language Disorders Post Stroke

This text delves into the neurological basis of speech and language disorders following a stroke. It explains the role of neural plasticity in recovery and presents innovative therapy methods to stimulate brain reorganization. Clinicians will find detailed protocols for both acute and chronic stages of rehabilitation.

4. Stroke and Speech Therapy: Evidence-Based Techniques

An essential resource for therapists, this book reviews current evidence

supporting various speech therapy interventions. It discusses the effectiveness of techniques such as constraint-induced language therapy and computer-assisted rehabilitation. The content is designed to help practitioners make informed treatment decisions.

5. *Communication Recovery After Stroke: A Therapist's Handbook*

This handbook offers step-by-step guidance for speech therapists assisting stroke patients in regaining communication abilities. It highlights assessment tools, goal setting, and adaptive communication strategies for severe impairments. The book also addresses the emotional and social aspects of speech recovery.

6. *The Aphasia Therapy Workbook: Exercises for Post-Stroke Speech Improvement*

Designed as a practical workbook, this title provides a variety of exercises targeting language, speech production, and cognitive-communication skills. It is suitable for both clinicians and caregivers working with stroke survivors. The exercises are customizable to individual patient needs and progress levels.

7. *Innovations in Post-Stroke Speech Therapy*

This collection of chapters by leading experts explores cutting-edge therapies and technologies in speech rehabilitation. Topics include virtual reality applications, non-invasive brain stimulation, and teletherapy methods. The book aims to inspire clinicians to integrate new tools into their practice.

8. *Understanding Aphasia: A Guide for Therapists and Families*

This accessible book helps both professionals and family members comprehend the impact of aphasia after stroke. It explains common symptoms, therapy approaches, and communication strategies to support recovery. Emphasis is placed on collaborative care and fostering a supportive environment.

9. *Functional Communication Strategies for Stroke Survivors*

Focusing on real-world communication challenges, this book offers practical strategies to enhance functional speech and language use. It covers topics such as conversation repair, alternative communication methods, and community reintegration. Therapists will find helpful tips for tailoring interventions to everyday contexts.

Mozeiko, Deborah S. Yost, 2022-11-14 This voice-driven, narrative, non-fiction book relays the stories of seven courageous women whose lives have been greatly impacted by a loved one's stroke, resulting in loss of language ability to one degree or another. Aphasia leads to varying degrees of problems in speaking, understanding, reading, writing, gesturing, and using numbers. Aphasia can be extremely stressful for both the individual who had the stroke and for their family and friends. Speech is such a significant part of human interaction, and it's something that most people take for granted. It's hard to be able to communicate if you've been dependent upon verbal communication and yours is suddenly impaired. Fortunately, some recovery from aphasia is possible, and there are still ways to effectively communicate, even with aphasia. The stories contained in the book are intended to help others feel less alone as they navigate their loss and the confusing healthcare system. The stories are told from the advent of a stroke of their loved-ones and describe how these caretakers persevered to find quality medical services and to provide home care. *Caring For a Loved One with Aphasia After Stroke* is written for people who are going through a similar crisis, or for those in the medical and/or speech/language field who are interested to learn more about perseverance and hope that are critical to aphasia.

post stroke speech therapy: *Stroke Rehabilitation, An Issue of Physical Medicine and Rehabilitation Clinics of North America* 26-4 John Chae, 2016-01-07 This issue of Physical Medicine & Rehabilitation Clinics will focus on stroke rehabilitation and will include articles such as: Mechanisms of stroke recovery, Insights from basic sciences, Stroke recovery and predictors of rehabilitation outcomes, Upper limb motor impairments, Post-stroke spasticity, Communication disorders and dysphagia, Neuropharmacology of Recovery, Robotic therapy, and many more.

post stroke speech therapy: *Neurorehabilitation Therapy and Therapeutics* Krishnan Padmakumari Sivaraman Nair, Marlís González-Fernández, Jalesh N. Panicker, 2018-10-11 This practical handbook for clinicians covers pharmacological and non-pharmacological treatment options in neurological rehabilitation.

post stroke speech therapy: *Speech After Stroke* Stephanie Stryker, 2014-05-14 By Stephanie Stryker, Private Practice, Miami Beach, Florida. With a Foreword by Jon Eisenson. Now in its Second Edition, this clinically proven manual offers practice materials for stimulating speech and language recall in brain-injured patients. New articulation and math exercises have been added as have higher level reading materials for mildly impaired patients. Throughout the book, materials have been redeveloped and expanded to increase their effectiveness. Large print and easily readable type facilitate learning and help those with reduced visual acuity. Five main sections provide illustrations and developmental exercises in speech comprehension, imitative ability and articulation, vocabulary and syntax, reading and money skills, and writing skills. Each section progresses from the simple to the complex; exercises are included for patients whose impairments range from mild to severe. The directions for applying the exercises are written in nontechnical language so they can be used by family members as well as by speech pathologists. Discussions of recovery time and of the limits of improvement are included, as is a list of suggested readings.

post stroke speech therapy: *Behavior Analysis Around the World* Claudia Dalbert, 2020-10-28 Behaviour analysis has traditionally been one of the main areas and main approaches to psychology. It is based on laboratory research and in conceptualizations from distinguished figures of the discipline, such as Skinner, Pavlov, Mach, and even Watson and Thorndike. It has generated a science (the experimental analysis of behaviour), a philosophy (behaviourism), and numerous practical applications (applied behaviour analysis). For several decades it was even considered to be the dominant paradigm in psychology. This special issue contains scientific articles in the main areas of behaviour analysis, both as a laboratory science and as an applied discipline. It covers representative research and applications of behaviour analysis at the beginning of the 21st century. The authors come from countries including the United States, China, Mexico, Spain, Belgium, France, Switzerland, Belgium, Colombia, Poland, Greece. This special issue is an indication of the international relevance of this area of psychology, and its current state.

post stroke speech therapy: *Stroke Prevention and Treatment* Jeffrey L. Saver, Graeme J.

Hankey, 2020-12-10 An evidence-based guide for clinicians caring for stroke patients, with advice for best practice in prevention, treatment and recovery.

post stroke speech therapy: *Brain Repair After Stroke* Steven C. Cramer, Randolph J. Nudo, 2010-10-28 Increasing evidence identifies the possibility of restoring function to the damaged brain via exogenous therapies. One major target for these advances is stroke, where most patients can be left with significant disability. Treatments have the potential to improve the victim's quality of life significantly and reduce the time and expense of rehabilitation. *Brain Repair After Stroke* reviews the biology of spontaneous brain repair after stroke in animal models and in humans. Detailed chapters cover the many forms of therapy being explored to promote brain repair and consider clinical trial issues in this context. This book provides a summary of the neurobiology of innate and treatment-induced repair mechanisms after hypoxia and reviews the state of the art for human therapeutics in relation to promoting behavioral recovery after stroke. Essential reading for stroke physicians, neurologists, rehabilitation physicians and neuropsychologists.

post stroke speech therapy: *Stroke Recovery and Rehabilitation, 2nd Edition* Richard D. Zorowitz, 2014-09-18 The definitive core text in its field, *Stroke Recovery and Rehabilitation* is a comprehensive reference covering all aspects of stroke rehabilitation ó from neurophysiology of stroke through the latest treatments and interventions for functional recovery and restoration of mobility. This second edition is completely updated to reflect recent advances in scientific understanding of neural recovery and growing evidence for new clinical therapies. The second edition ó which includes free e-book access with every print purchase ó continues to provide in-depth information on the assessment and management of all acute and long-term stroke-related impairments and complications including cognitive dysfunctions, musculoskeletal pain, and psychological issues. It examines risk factors, epidemiology, prevention, and neurophysiology as well as complementary and alternative therapies, functional assessments, care systems, ethical issues, and community and psychosocial reintegration. With contributions from over 100 acknowledged leaders from every branch of the stroke recovery field, this edition features expanded coverage of key issues such as the role of robotics and virtual reality in rehabilitation. New chapters have been incorporated to cover fields of recent exploration including transcranial magnetic stimulation, biomarkers, and genetics of recovery as well as essentials like the use of medication and the survivor's perspective. The up-to-date presentation of scientific underpinnings and multi-specialty clinical perspectives from physical medicine and rehabilitation, neurology, physical therapy, occupational therapy, speech and language pathology, and nursing ensures that *Stroke Recovery and Rehabilitation* will continue to serve as an invaluable reference for every health care professional working to restore function and help stroke survivors achieve their maximum potential. New to *Stroke Recovery and Rehabilitation, Second Edition* All chapters are thoroughly revised and updated to reflect advances in scientific understanding of neural recovery and clinical progress Five completely new chapters and expanded coverage of key issues that drive the field forward New contributions from leading stroke specialists from all involved disciplines Includes access to the fully-searchable downloadable ebook

post stroke speech therapy: *Translational Neurorehabilitation* Rocco Salvatore Calabrò, 2024-08-30 This book focuses on rehabilitation demonstrating how translational research may help clinicians in boosting neural plasticity and functional recovery. *Translational Neurorehabilitation* is a new interesting field that seeks to produce more meaningful, applicable rehabilitation results that directly enhance human health, performance and quality of life. As neurological diseases increase with age and people who survive a brain injury are rising, thanks to the improvement of intensive acute care, the need to appeal to neurorehabilitation will double in the next few years. Motor, cognitive and behavior approaches have changed over the years and novel tools to treat brain and spinal cord injury should be validated before translating them into clinical practice. The book is aimed to expand the current understanding of brain function and disease by evaluating preclinical and clinical trials on neural plasticity and functional recovery after nervous system disorders. Also, it disseminates the knowledge coming from novel therapies, including advanced robotic and ICT-based

applications. The book will be of interest to neuroscientists, physiatrists, neural engineers, and clinical neurologists.

post stroke speech therapy: *Rehabilitation with rTMS* Masahiro Abo, Wataru Kakuda, 2015-11-17 Repetitive transcranial magnetic stimulation (rTMS) is increasingly being studied and used in stroke rehabilitation. This handbook is the first concise guide for clinicians and researchers working with or learning about rTMS in stroke rehabilitation. It gives you a practical guide to the novel use of rTMS in combination with intensive rehabilitation for the treatment of neurological sequelae of stroke. The application areas included are post-stroke upper limb hemiparesis, lower limb hemiparesis, aphasia and dysphagia.

post stroke speech therapy: *Current Therapy in Neurologic Disease* Richard Tidball Johnson, John W. Griffin, Justin C. McArthur, 2006-01-01 Neurologists present their own experiences and step-by-step guidelines on the management and treatment of specific disorders affecting the nervous system. Diagnosis, epidemiology, and pathophysiology are discussed only when they affect treatment strategies and decisions. Treatment algorithms and patient resource information complement each chapter.

post stroke speech therapy: *Vascular Neurology Board Review* Nancy Futrell, Dara G. Jamieson, 2017-12-28 Vascular Neurology Board Review: Questions and Answers Second Edition Expanded and updated successor to the only question and answer review book for vascular neurology Now with 620 questions—more than 250 completely new to this edition—this review guide has been thoroughly revised to reflect current science and clinical knowledge. With improved diagnostic-quality images, an emphasis on new drugs, and added chapters devoted to anatomy, clinical trials and ethics, neuro-ophthalmology, and case studies, this comprehensive review covers the full range of topics tested on the ABPN vascular neurology certification and MOC exams. Vascular Neurology Board Review is an engaging, active method to gauge proficiency and identify gaps for further study. Questions and answers with detailed rationales address a broad mix of topics including basic science, pharmacology, epidemiology and prevention, recovery and rehabilitation, and recognition, evaluation, and treatment of cerebrovascular diseases and associated clinical problems. Each answer is accompanied by a relevant reference to guide further study. The book is a must-have review tool for anyone taking the vascular neurology subspecialty exam, and for physicians who want to enhance their understanding of stroke and stroke-related issues and concerns. Key Features: Contains 620 board-style questions and answers with rationales and references Covers all topic areas on the ABPN content outline for vascular neurology boards and the MOC exam 85 images reinforce key diagnostic points and build interpretive skills 5 new chapters All questions reviewed and updated to include the latest scientific, clinical, and treatment information Includes downloadable ebook to broaden study options

post stroke speech therapy: *Neurology 14* Ednilson Brandl, 2025-05-02 The brain remains one of the greatest frontiers of human knowledge, captivating scientists, clinicians, and philosophers alike. In recent decades, monumental strides in neuroscience have redefined our understanding of the nervous system—from molecular signaling pathways to complex behavioral manifestations. This book is born from the collective progress of these explorations, offering a comprehensive dive into both the theoretical framework and practical applications emerging from neuroscience research. Each chapter has been carefully curated to bridge the gap between foundational knowledge and cutting-edge innovation. While exploring synaptogenesis, neurogenomics, and gene therapies, the book also highlights the critical importance of interdisciplinary collaborations that fuse biology, engineering, and medicine. The result is a resource that speaks not only to scholars and healthcare professionals but also to engineers, biotechnologists, and students looking to grasp the intricacies of the nervous system. As science pushes forward into previously uncharted territories like epigenetics, nanoneurosurgery, and cognitive rehabilitation, we must ensure that knowledge dissemination keeps pace. This preface is both an invitation and a responsibility—to inspire curiosity, support learning, and ultimately foster breakthroughs in the prevention, diagnosis, and treatment of neurological disorders.

post stroke speech therapy: Handbook of Neurological Rehabilitation Richard J. Greenwood, Thomas M. McMillan, Michael P. Barnes, Christopher D. Ward, 2005-08-16 Provides an invaluable resource for all professions that work with patients suffering from neurological disorders.

post stroke speech therapy: Aphasia Argye Elizabeth Hillis, Julius Fridriksson, 2022-01-23 Aphasia, Volume 185 covers important advances in our understanding of how language is processed in the brain and how lesions or degeneration in the left hemisphere affect language processing. This new release reviews research regarding how language recovers from brain injury, along with new interventions developed to enhance recovery, including language rehabilitation, noninvasive brain stimulation and medications. Sections cover neuroanatomy and neurophysiology of language networks, focus on mechanisms of recovery (and decline) of language, and include chapters on intervention, including recently developed behavioral therapies, brain stimulation, medications, and a review of studies of treatment for both post-stroke aphasia and primary progressive aphasia. - Summarizes advances made in understanding language processing - Discusses how lesions and brain degeneration affect language production and comprehension - Identifies language networks based on functional imaging and lesion mapping - Provides interventions for recovery, including brain stimulation, behavioral interventions and medication - Explores post-stroke aphasia and primary progressive aphasia

post stroke speech therapy: Physical Rehabilitation Susan B O'Sullivan, Thomas J Schmitz, George Fulk, 2019-01-25 Rely on this comprehensive, curriculum-spanning text and reference now and throughout your career! You'll find everything you need to know about the rehabilitation management of adult patients... from integrating basic surgical, medical, and therapeutic interventions to how to select the most appropriate evaluation procedures, develop rehabilitation goals, and implement a treatment plan. Online you'll find narrated, full-color video clips of patients in treatment, including the initial examination, interventions, and outcomes for a variety of the conditions commonly seen in rehabilitation settings.

post stroke speech therapy: *Neurology Nursing 101* LD Mathews , 2024-10-23 Welcome to Neurology Nursing 101, your essential resource for mastering the specialised and intricate field of neurology nursing. Whether you're beginning your career in neurology nursing or seeking to expand your expertise, this guide provides the foundational knowledge and practical skills required to care for patients with neurological conditions.

post stroke speech therapy: *The Behavioral and Cognitive Neurology of Stroke* Olivier Godefroy, 2013-02-28 The ever-improving emergency care of those who have suffered serious cerebrovascular disease has shifted the treatment objective towards helping sufferers regain independence - meaning that there is an increased need to understand, manage and treat the residual deficits. The Behavioral and Cognitive Neurology of Stroke focuses on the diagnosis and management of behavioral and cognitive problems in patients with cerebrovascular disease. Written to be practical for clinical use, the book contains diagnosis and management strategies for all disorders observed in stroke patients, including acute and later problems, and aiming to minimize long-term disability. All important information related to each disorder is summarized in key-point tables. Fully updated throughout and containing five new chapters, this new edition brings the book up to date with the major advances of the last five years. This book will be of value to all clinicians caring for stroke patients, neuroscientists, neuropsychologists, neurorehabilitationists and a wide range of therapists.

post stroke speech therapy: *Aphasia Compendium* Dragoş Cătălin Jianu, Dafin F. Muresanu, 2022-06-01 Aphasia is an acquired central disorder of language that impairs a person's ability to understand and/or produce spoken or writing language. The study of aphasia is important in different clinical and fundamental areas, including neurology, psychology, linguistics, and speech-language pathology. This book presents comprehensive information on the diagnosis and treatment of aphasias. Chapters cover such topics as linguistics and the study of aphasias, different types of aphasias, treatment approaches, imaging, and much more.

post stroke speech therapy: Rational Basis for Clinical Translation in Stroke Therapy

Giuseppe Micieli, Diana Amantea, 2014-08-27 Stroke remains one of the major causes of death and long-term disability worldwide. Currently, the only approved therapy for the acute treatment of this disease is thrombolysis, a strategy that can only be applied to a small percentage of patients due to its narrow therapeutic window. Unfortunately, during the last years numerous promising drugs th
