Understanding Post Secondary Education Degrees

Post secondary education degrees refer to academic qualifications earned after the completion of secondary education, typically high school. These degrees are offered by colleges, universities, technical schools, and other accredited institutions. The purpose of obtaining a post secondary education degree is to gain advanced knowledge, skills, and credentials that prepare individuals for specific careers or further academic pursuits. This level of education is distinct from secondary education, emphasizing specialized coursework, research, and professional development.

Definition and Scope

A post secondary education degree is any degree awarded beyond the high school diploma, encompassing a

variety of credential levels. These degrees vary in length, depth of study, and focus areas, and may be academic, vocational, or professional in nature. The scope includes programs that develop critical thinking, technical expertise, and theoretical understanding necessary for various industries and academic fields.

Accreditation and Recognition

Accreditation ensures that institutions offering post secondary education degrees meet quality standards set by educational authorities. Recognition of a degree depends on the accreditation status, which affects transferability, employment prospects, and eligibility for further education. Students should verify an institution's accreditation before enrolling to ensure their degree holds value in the job market and academia.

Types of Post Secondary Education Degrees

There is a broad spectrum of post secondary education degrees available, each catering to different academic and professional goals. These degrees vary by duration, specialization, and level of advancement.

Associate Degrees

Associate degrees typically require two years of study and are offered by community colleges and technical schools. They are designed to provide foundational knowledge and skills, often serving as a stepping stone to a bachelor's degree or entry-level employment. Common types include Associate of Arts (AA) and Associate of Science (AS).

Bachelor's Degrees

Bachelor's degrees generally require four years of full-time study and are awarded by universities and colleges. These degrees offer in-depth knowledge in a specific field or discipline, balancing general education with major-specific coursework. Popular degrees include Bachelor of Arts (BA) and Bachelor of Science (BS).

Master's Degrees

Master's degrees involve one to two years of graduate-level education beyond the bachelor's degree. These degrees focus on advanced skills, research, and professional expertise. Examples include Master of Arts (MA), Master of Science (MS), and specialized professional degrees such as Master of Business Administration (MBA).

Doctoral Degrees

Doctoral degrees represent the highest level of academic achievement and usually require several years of study, research, and dissertation work. These degrees prepare graduates for careers in academia, research, and high-level professional practice. The most common doctoral degree is the Doctor of Philosophy (PhD), although professional doctorates also exist.

Professional and Technical Degrees

Beyond traditional academic degrees, post secondary education also includes professional and technical degrees focused on practical skills and certifications. These programs prepare students for specific careers in fields such as nursing, engineering, law, and information technology.

post secondary education degree: Postsecondary Education for American Indian and Alaska Natives: Higher Education for Nation Building and Self-Determination Bryan McKinley Jones Brayboy, Amy J. Fann, Angelina E. Castagno, Jessica A. Solyom, 2012-03-20 After decades of national, state, and institutional initiatives to increase access to higher education, the college pipeline for American Indian and Alaska Native students remains largely unaddressed. As a result, little is known and even less is understood about the critical issues, conditions, and postsecondary transitions of this diverse group of students. Framed around the concept of tribal nation building,

this monograph reviews the research on higher education for Indigenous peoples in the United States. It offers an analysis of what is currently known about postsecondary education among Indigenous students, Native communities, and tribal nations. Also offered is an overview of the concept of tribal nation building, with the suggestion that future research, policy, and practice center the ideas of nation building, sovereignty, Indigenous knowledge systems, and culturally responsive schooling.

post secondary education degree: *Institutional Diversity in American Postsecondary Education* Tiffany J. Davis, Shelley Price-Williams, Pietro A. Sasso, 2024-07-01 The glossy and polished college videos, view books, and websites catered to the marketplace of students. Some recruitment brochures often discuss famous alumni, athletics championships, and a vibrant student life. Particularly at research universities, marketing materials may even focus on entrepreneurs and medical discoveries. These types of colleges along with others compromise the marketplace of higher education in which different types of colleges exist across a spectrum of missions, institutional sagas, and histories. Within this marketplace is a bewildering and disorienting catalog of different institutional types and classifications. This marketplace also exists within a conglomerate of rankings and ratings that are ordered by US News & World Report and Peterson's. Such rankings are often connected to a larger quest for prestige and primarily facilitated by these private-sector publications, but are juxtaposed to the higher education industry-created Carnegie Classification system. The Carnegie Classification system was created as an approach to differentiate the more than 4,000 institutions by size, mission, and scope for research and policy analysis. However, this system is also integrated into broader hierarchies of accreditation and funding. However, the continued reclassification of the system in 2005, 2010, and the addition of new categories in 2018 such as doctoral/professional has advanced to "call attention to- and emphasize the importance of-the considerable institutional diversity of U.S. higher education (2005, p. 52). However, these typologies do not fully describe or conceptualize the organizational, administrative, culture, or student experiences of each of these typologies. The rankings guides and the Carnegie Classification systems often overlook more nuanced institutional types such as faith-based or "works colleges." They also overlook the role and impact of Minority Serving Institutions (MSI). This lack of recognition often facilitates continued invisibility for different institutional types and the diverse multiple student populations they may educate and support. Therefore, this edited text seeks to expand and further the Carnegie Classification system typology, and beyond the private sector rankings. This text is a response to a call for existential exploration as an attempt to critically revivify our understanding of the various institutional types and is inspired by the words of David Thorton Moore in which it might be heartening to see a cadre of faculty and critical scholars facilitate, "a form of discourse in which teachers and students conduct an unfettered investigation of social institutions, power relations, and value commitment." In this text, the authors describe and problematize the various institutional types as defined by accreditation, Carnegie classification, and private sector rankings.
