tamu dean of engineering: Educating the Engineer of 2020 National Academy of Engineering, 2005-11-06 Educating the Engineer of 2020 is grounded by the observations, questions, and conclusions presented in the best-selling book The Engineer of 2020: Visions of Engineering in the New Century. This new book offers recommendations on how to enrich and broaden engineering education so graduates are better prepared to work in a constantly changing global economy. It notes the importance of improving recruitment and retention of students and making the learning experience more meaningful to them. It also discusses the value of considering changes in engineering education in the broader context of enhancing the status of the engineering profession and improving the public understanding of engineering. Although certain basics of engineering will not change in the future, the explosion of knowledge, the global economy, and the way engineers work will reflect an ongoing evolution. If the United States is to maintain its economic leadership and be able to sustain its share of high-technology jobs, it must prepare for this wave of change.

tamu dean of engineering: Engineering Agriculture at Texas A&M Henry C. Dethloff, Stephen W. Searcy, 2015-02-19 The abundance of agricultural production enjoyed in the United States is the result of a federal-state partnership that relies on land grant universities to respond to the needs of society through research, invention, problem-solving, outreach, and applied science and engineering. The Biological and Agricultural Engineering Department at Texas A&M University, established in 1915, has been an important part of that effort. Over the hundred years of its

existence, it has successfully tackled the challenges of mechanization, electrification, irrigation, harvest, transport, and more to the benefit of agriculture in Texas, the United States, and the world. In this book, historian Henry Dethloff and current department chair Stephen Searcy explore the history of the department—its people, its activity, its growth—and project the department's future for its second century, when its primary task will be to sustainably help meet the needs of a predicted 9.6 billion Earth residents and to recognize that societal food concerns are focused more and more on sustainable production and human health.

tamu dean of engineering: Race, Rigor, and Selectivity in U. S. Engineering Amy E. Slaton, 2010-06-01 Despite the educational and professional advances made by minorities in recent decades, African Americans remain woefully underrepresented in the fields of science, technology, mathematics, and engineering. Even at its peak, in 2000, African American representation in engineering careers reached only 5.7 percent, while blacks made up 15 percent of the U.S. population. Some forty-five years after the Civil Rights Act sought to eliminate racial differences in education and employment, what do we make of an occupational pattern that perpetually follows the lines of race? *Race, Rigor, and Selectivity in U.S. Engineering* pursues this question and its ramifications through historical case studies. Focusing on engineering programs in three settings--in Maryland, Illinois, and Texas, from the 1940s through the 1990s--Amy E. Slaton examines efforts to expand black opportunities in engineering as well as obstacles to those reforms. Her study reveals aspects of admissions criteria and curricular emphases that work against proportionate black involvement in many engineering programs. Slaton exposes the negative impact of conservative ideologies in engineering, and of specific institutional processes--ideas and practices that are as limiting for the field of engineering as they are for the goal of greater racial parity in the profession.

tamu dean of engineering: *You Can Go Home Again* Charles Hays, 2012-09 This book is a work of fiction about a terrible coal mining accident that happened in Hazard, Kentucky during the early 1980's. The date of the accident was about 1982 plus or minus maybe three years. It's hard to pin it down any better than that. But, I can tell you this much, it occurred back when Catherine Bach was playing the role of Daisy Duke on a TV show called *The Dukes of Hazzard*. What a beautiful woman she was when she walked across my TV screen. Everything about her body was absolutely adorable and, at the time, she just took my breath away. My protagonist in this particular tale is a man by the name of Caleb Baker. He is a Houston widower who has nothing to do since the passing of his wife. His lifelong friend is the Mayor of Hazard, Honorable Herbert Ray Henry who wants him to return to the mountains where he was born and reared. Henry wants it so bad that he has thrown in analytical laboratory and a staff of two talented people. Baker's first case involves a coal mine explosion. So you can go home again.

tamu dean of engineering: For a Greater Purpose Robert J. Marks II, William A. Dembski, 2020-09-02 Walter Bradley made a deal with God: he would unashamedly share his faith with students and faculty, and he would not let academic ambition prevent him from giving his faith and family the time they deserve. The day he could no longer keep that deal, he would leave the academy. He never had to. From his days as a determined graduate assistant sharing his love for Jesus with his first class, to becoming one of the most respected engineering professors in academia, Walter Bradley remained a man of integrity, dedicated to truth and love. He's made a difference in myriad ways from leading a small Bible study for students in his home to defending intelligent design before large crowds of his academic peers. He's equally comfortable performing ground-breaking research for NASA, serving as an expert witness in the courtroom, or empowering people in Africa with appropriate technologies. Through it all, one thing has remained true: Walter Bradley made a crucial difference for good in countless lives. In *For a Greater Purpose: The Life and Legacy of Walter Bradley*, authors Robert Marks and William Dembski detail the story of this remarkable man whose passion for God, science, higher education, and human empowerment provides an excellent model of someone who integrates faith and learning.

tamu dean of engineering: Architecture That Speaks Nancy T. McCoy, David G. Woodcock,

2017-09-11 When the A&M College of Texas opened its doors in 1876, its early buildings followed a Victorian architectural style. Classical architecture came to the campus with the Academic Building, after the 1912 fire that destroyed Old Main. Subsequent buildings generally followed this neoclassical path, but the growth of the campus in the Depression era saw the addition of an extraordinary group of buildings, sited in accordance with a master plan developed by college architect F. E. Giesecke and designed by S. C. P. Vosper, each of whom also held faculty positions in the first architecture program at a state college in Texas. The buildings designed by Vosper are arguably the finest buildings on the campus, uniquely expressive of the agricultural and mechanical origins of the university; they delight the senses with color, sculpture, and wit. Nancy T. McCoy and David G. Woodcock, distinguished preservation architects and scholars, review the history of Texas A&M campus architecture and provide in-depth coverage of Vosper and his legacy. Illustrated by the sumptuous photography of Carolyn Brown, *Architecture That Speaks* concludes with observations on recent approaches toward the reuse and rehabilitation of campus heritage architecture and a view to the future, as plans evolve for further development of the campus that maintains a respect for both strategic vision and historical heritage.
