Community-engaged scholars aim to serve the public good by developing and sustaining community-campus partnerships built on trust, reciprocity, and mutual benefit. As universities orient themselves towards serving the public good, they face a number of challenges: faculty and students may not possess the competencies or commitment to build fruitful community partnerships, graduate and undergraduate students may lack the necessary training and mentorship required to develop their identity as community-engaged scholars, and institutional leaders may not know how to motivate faculty and students for this ambitious and challenging endeavor. Unless these challenges are addressed, universities will fail to prepare the next generation of community-engaged scholars. *Preparing Students for Community-Engaged Scholarship in Higher Education* is an essential research book that explores how faculty and academic leaders can create learning opportunities and intellectual cultures that support the development of community-engaged scholars. Additionally, it will examine how university coursework can help undergraduate and graduate students to develop the knowledge, skills, and commitments necessary for productive and responsible community-engaged scholarship. tcc veterinary technician program: Community College Leadership Pamela L. Eddy, 2023-07-03 Two-year colleges are facing major change. The majority will undergo a turnover in college presidencies in the next ten years, at a time when they are being asked to be engines for economic growth, enable more students – and a greater diversity of students – to gain 21st century qualifications, and provide a pathway to higher degrees, all with reduced state and local funding. Recognizing that future community college leaders – at all levels– will manage increasingly complex organizations, and face very different challenges than their predecessors, this book provides a multidimensional model of leadership suited to these new demands and environments. The model addresses issues of leader cognition, race and gender, the importance of culture, and the need for more collaborative modes of communication and decision making to frame and implement change. It recognizes that there is no longer any one way to lead, and that the next generation of leaders will be more diverse, possess experience and qualifications from a wider variety of careers, and follow new pathways to their positions. Leaders in the future will possess a cultural competency that is fostered by being lifelong learners. Through over 75 individual interviews with leaders and campus members, Eddy is able to provide examples of the model's components in practice and to illuminate which experiences proved the most relevant for these leaders on their route to upper administration. She shows how her model intersects with the leadership competencies defined by the American Association of Community Colleges, and proposes strategies for future leadership development. This book is intended for anyone considering a leadership position, at any level, in a community college; for college administrators and boards responsible for leadership development programs; and for individuals in corresponding organizations who conduct training programs for aspiring leaders. Likewise, those employed at four-year universities may find value in the model as a developmental tool.
