tcs questions for interview: *RECRUITMENT AND SELECTION PRACTICES OF IT COMPANIES IN ANDHRA PRADESH – A STUDY OF SELECT UNITS* Dr. Ravi Kumar Gummadi, 2015-09-01 "A highly successful organisation is built on the strengths of exceptional people. No matter how much technology and mechanisation is developed, no organisation could survive and prosper without them". --- Luszez and Kleiner, 2001 The most important corporate resource over the next few years will be talent: smart, sophisticated business people who are technologically literate, globally astute, and operationally agile. And even as the demand for talent goes up, the supply of it will be going down. This seems to particularly hold true in case of the IT-ITES (Information Technology and Information Technology- Enabled Services) industry in India which requires high quality and highly skilled labour force to cater to the rapidly increasing global demand for software services but is currently facing an increasing shortage of skills supply. Moreover, due to shortages of skilled workers, high turnover rates, and rapid business growth in the service sectors, it has been noted that recruiting, selecting, and placing applicants are among the top three priorities of human resource professionals. Since the IT industry in India is faced with these three challenges, recruitment and selection comprises an important human resource practice in this industry. Further, in this industry, human resources comprise both the raw material and the 'technology', and are therefore of prime importance. As India completes the transition from being an agrarian economy to being a full-fledged, first-world economy, operating at the leading edge of contemporary technology, the IT sector is emerging as major driver of the economy. The Indian IT industry comprises of domestic software and services firms as well as foreign firms looking to consolidate their presence in India owing to the increasing cost pressures in US and Europe. This has increased the need to setup in-house development centers or outsource to third-party service providers in low cost countries

such as India. IT and IT enabled services include a wide range of services from back-office data entry and processing to customer contact services, corporate support functions, knowledge support functions and research and design activities. As per the latest Forbes Research, India now controls 44 per cent of the global offshore outsourcing market for software and back office services. As per Nasscom estimates, it is projected to grow to 51 per cent. If this growth is sustained, Nasscom has estimated that there will be a potential shortfall of above 2, 10,000 IT and ITES professionals in India by the year 2012 and demand will out-pace the supply. Though the Indian IT industry is in a strong position to leverage this global software opportunity (as India currently has one of the world's largest, most qualified pools of scientific and engineering manpower), this growing global demand is not only for numbers but also for appropriately skilled, industry-oriented professionals as companies are further scaling their operations and offering high value-added services which involve higher levels of technology and more specialized, higher-end services. Hence, firms which want to maintain their competitive advantage have to carefully recruit and select the most suitable out of the large pool of available manpower. Moreover, according to a recent study by McKinsey & Co., although the potential supply of talent in low wage countries such as India is large and growing rapidly, only a fraction of the job candidates could successfully work at a foreign company on account of their limited suitability i.e. though there are many candidates with the technical skills to fill a position, they may not have the cultural skills to "fit in" with the organisation. The same issue is also faced by large globally competitive domestic Indian firms who are competing for the same pool of talent and skills as their foreign counterparts to remain competitive and survive in global and domestic markets.

tcs questions for interview: Rethinking School-University Partnerships Prentice T. Chandler, Lisa Barron, 2021-05-01 Rethinking School-University Partnerships: A New Way Forward provides educational leaders in K-12 schools and colleges of education with insight, advice, and direction into the task of creating partnerships. In current times, colleges of education and local school districts need each other like never before. School districts struggle with pipeline, recruitment, and retention issues. Colleges of education face declining enrollment and a shifting educational landscape that fundamentally changes the way that teachers are trained and what local school districts expect their teachers to be able to do. It is with these overlapping constraints and converging interests that partnerships emerge as a foundational strategy for strengthening the education of our teachers. With nearly 80 contributors from 16 states (and Jamaica) representing 39 educational institutions, the partnerships described in this book are different from the ways in which colleges of education and school districts have traditionally worked with one another. In the past, these loose relationships centered primarily on student teaching and/or field experience placements. In this arrangement, the relationship was directed towards ensuring that the local schools were amenable to hosting students from the college of education so that the student/candidate could complete the requirements to earn a teaching license. In our view, this paradigm needs to be enlarged and shifted.

tcs questions for interview: "Crouching Tiger" Brendan Keane, Dr Ita (Editor), Micheal Ó'hAodha, 2009-10-02 There are few people who have not heard of the Irish software success story. Once a country whose primary industries were agriculture and manufacturing, Ireland has become a focal point for many multinational corporations setting up major offshore software bases. There has also been strong growth in the indigenous software sector. However, the Irish software industry is facing some new challenges. Low-cost countries are investing in the growth of their software industry. And, with this investment, they are also focusing on software quality to given themselves a further competitive edge. This is particularly true in the case of India. Both Ireland and India hold much in common in that their respective economies can boast English speaking, well-educated workforces. Consequently, the Irish software industry must be aware of strengths demonstrated by their competitors in India. This volume explores the attitudes and experiences of the members of the

Indian and Irish software communities towards one aspect of quality - that of software process quality. A comparison of the implementation of software process models is presented, concluding with recommendations to support the Irish software industry's competitiveness in a global marketplace.

tcs questions for interview: Interrogating Models of Diversity within a Multicultural Environment Michael Tonderai Kariwo, Neda Asadi, Chouaib El Bouhali, 2019-05-28 Discussing common understanding of the concepts of multiculturalism, diversity, and inclusion, this volume critically examines the interpretation and praxis of diversity and inclusion in relation to marginalized populations—from women, sexual minorities, minority newcomers, and aboriginal communities. The contributors collected here present well-grounded epistemological, theoretical, and methodological bases from which to account (at least in part) for the processes and dynamics shaping the relationship between diversity and inclusion, on the one hand, and policy and practice on the other. Arising from research derived in part from community work with minorities in North America, particularly Canada, this volume examines common barriers to full minority integration, with important implications for inclusion efforts around the globe.
