taylor springs health campus: President Rembert Stokes of Wilberforce , 2009 President Rembert Stokes of Wilberforce, 1956 to 1976 provides an excellent, rich and very interesting history of the presidency of the 14th President of Wilberforce University. It provides a good study on presidential leadership effectiveness in a higher education setting. Students were trained to fulfill their potential in all areas of life, intellectually, morally, culturally, socially, politically and vocationally. Dr. Stokes was selected for the presidency to succeed President Hill, who died suddenly of a massive heart attack, because of his sound academic background, religious preparation in the Theological Seminary, unique personal characteristics, leadership experience as very capable A.M.E, in the churches he pastored and his accomplishments as the Dean of Payne Theological Seminary. His work as the Dean of Payne Theological Seminary over a five year period made people believe that he was qualified to be the President of the University. He brought the Seminary to a point of excellence. It was given accreditation status during his tenure as the Dean. He was an outstanding and distinguished educator. He was innovative, creative and could foresee

long in to the future. He was a superior visionary, an outstanding student development person and a gifted fund raiser. He believed in the philosophy that God has given us more sky than we can ever fly and He has given us more water than we can ever sail and He has given us more love than we can ever give. His ambition was to work, in faith, for the stability of the University and the encouragement of the students who attended the University to embrace a dynamic Christian World View. He used godly ways and he was blessed. There are three major controlling factors that donors evaluate when making grants to institutions of higher education. There are probabilities, potentialities, and prudence. These are considered a three-way test along with the donor's motivation and objectives. The probabilities deal with the justification for continued survival in the future while potentialities involve the quality of service to the community. Prudence is the wisdom in the action.

taylor springs health campus: Women Scholars: Navigating the Doctoral Journey Jelane A. Kennedy, Beverly A. Burnell, 2018-12-07 Over and over, studies have concluded that the doctoral experience is a monumental challenge in higher education, particularly for women. This book, *Women Scholars: Navigating the Doctoral Journey*, provides an enlightening ethnographic look at women and their doctoral developmental experiences. The book's aim is to empower women to be able to contextualize their experience while also offering support and inspiring readers to consider alternative ways to successfully approach the doctoral process. Women anticipating and entering the life of academia will benefit from the voices and experiences shared by the women scholars in this book. The essay writers in this volume offer an examination of critical incidents in their doctoral experiences and offer strategies they have found helpful in managing those incidents. The book also addresses challenges presented by the transition from doctoral study to post-doc employment. The volume presents 46 essays from 40 women representing a range of ages, ethnicities, academic disciplines, sexual orientations, family circumstances, and family educational histories. Their stories are told in five stages: Stage 1: Preadmission to Enrollment Stage 2: First Year of Program Stage 3: Second Year Through Candidacy Stage 4: The Dissertation Stage Stage 5: Completion and Transition to Employment These are stories of empowerment, of pitfalls and barriers overcome, of successful negotiations of the graduate school process, of the joys and challenges of scholarly pursuits, of positive help-seeking behaviors and strategies, and of life after the dissertation is completed. Potential applicants for doctoral studies will walk away with a sense that graduate education is possible and that one can be successful. Higher educators in doctoral programs, as well, will acquire a deeper understanding and appreciation for the idiosyncratic challenges facing their female students and, one hopes, develop policies and/or strategies and behaviors that empower and encourage these students' completion of their doctoral studies.
