why is information technology important: Information Technology in the Teaching of History Allan Martin, Lez Smart, David Yeomans, 2013-11-26 Information technology offers powerful tools to facilitate and to assist learning across the whole curriculum; the computer is certainly the most significant development in educational technology in the twentieth century. History may be thought of as a staid and perhaps tradition-bound subject, more resistant to change than some areas. Yet in history too, information technology is making an impact. This volume shows how information technology is currently contributing to, and bringing about changes in the way history is taught and learned. The international selection of the contributions shows that these phenomena are not restricted to just one country. The impact of information technology on history curricula is explored in depth in one section of the book, whilst other sections focus on classroom activities and issues, on the development of software for history, and on the relevance of current information technology developments. But the question which lies at the heart of it all remains that of how information technology can enhance the teacher's ability to offer situations in which learners can form and develop a real understanding of the nature of historical processes, and the ways in which they can be studied.

why is information technology important: Why Quality is Important and How It Applies in Diverse Business and Social Environments, Volume I Paul Hayes, 2020-12-24 These two volumes are about understanding—why—and application—how—with the aim of providing guidance and introduction to both. Quality is the consistent achievement of the user's expectations of a product or service. The achievement needs to be "The right thing, right first time, every time, in time." Beginning with manufacturing and services, it also includes professional, personal, and spiritual dimensions. Variation does not sit happily with consistency and skill in handling risk and opportunity requires competence in the use of statistics, probability, and uncertainty; and needs to complement the critically essential soft dimensions of quality and the overarching and underpinning primacy of personal relationships. There are no clear boundaries to the applicability of quality and the related processes and procedures expressed in management systems, and this is why it matters so much to show "how it applies in diverse business and social environments." Increasingly, the acceptability of boundaries that are drawn depends on their effect on the user and the achievement of quality, and the latest standards on quality management are explicit on this key point. Quality is everyone's business, and there is no single professional discipline that can properly express this. Insights, knowledge, experience, best practice, tools, and techniques need to be shared across all kinds of organizational and professional boundaries, and there is no departmental boundary that can stand apart from the organization-wide commitment to quality achievement.

why is information technology important: Integrating Information Technology into

Education Donald Watson, David Tinsley, 2013-11-11 Deryn Watson and David Tinsley The topic of the conference, integrating infonnation technology into education, is both broad and multi-facetted. In order to help focus the papers and discussion we identified 7 themes: • Current developments in society and education influencing integration; • Teachers, their roles and concerns; • Learners, their expectations of and behaviour in an integrated environment; • Developments and concerns in the curriculum; • Successes and failures in existing practice; • Organisation and management of integrated environments; • Identification of social and political influences. Each author was invited to focus on one theme, and these remained strands throughout as can be seen from the short papers and focus group reports. The first and most significant concern therefore was to be clear about our notions of integration; what do we mean and how is this relevant? Our keynote paper from Cornu clearly marked out this debate by examining the notion of integration and alerting us to the fact that as long as the use of IT is still added to the curriculum, then integration has not yet begun.

why is information technology important: Information Technology and Innovation in Language Education Chris Davison, 2005-01-01 This book presents a critical analysis and investigation of current developments and debates in the use of information technology (IT) in English language teaching (ELT) internationally. The first section of the book provides an overview of the key issues in IT and innovation in English language education such as the complex nature of IT and its use in ELT, both in the present and future, and the often problematic nature of innovation in relation to IT and ELT. It focuses primarily on the level of programs and curricula, looking at the way organizations and educational systems in different countries respond to the so-called "IT imperative." The second section adopts a more overtly social constructivist perspective to explore examples of innovative practice in IT use in ELT around the world. It tackles issues arising from classroom implementation and pedagogy, looking at the way learners and teachers can and do use IT in their everyday practice. The final section investigates the problems of building a community of professional practice in IT in English language education. It focuses on the level of professional development and teacher education and in doing so, demonstrates how the implementation of IT in schools and classrooms can be enhanced through taking into account key aspects of teachers' existing contexts and professional practices. Throughout the book, the contributors adopt a constructive but critical perspective on the use of IT in English language education, often challenging its role in developing learner autonomy, its effectiveness in developing language learning and its capacity to enhance pedagogic practice in the language teaching classroom, at the same time suggesting effective models and guidelines for good practice.
